STANDARD PI-LED MISSION AO TEMPLATE

REVISION HISTORY

The latest revision of the Standard AO Template is posted at <http://soma.larc.nasa.gov/StandardAO/>.

August 9, 2008 Initial release

December 3, 2008 Revision incorporating lessons learned from development of the Draft New Frontiers AO

- Change in policy, Section 5.6.6 Full Cost Accounting for NASA Facilities and Personnel: For the purpose of calculating the full cost of NASA provided services for proposals submitted in response to this AO, the CM&O burden should be applied only to NASA provided labor including Center civil servants and on-site contractors; this cost must be included in the PI-Managed Mission Cost.
- Addition of new standard language, Appendix B Section J Part 6 Planetary Protection and/or Sample Curation Plan: Added requirements for planetary protection plans and curation plans.
- Clarification of language with minor impact on policy or requirement: Section 4.1.2 NASA Program Management, Section 4.5.1 Independent Verification and Validation, Section 5.1.5.2 Curation of Returned Samples, Section 5.2.5.2 Program Requirements for the Use of Radioactive Material, Section 5.9.2 Launch Services, Appendix B General Requirements, Appendix B Section E Science Implementation.
- Clarification of language without change in policy or requirement: Section 4.1.1 NASA Flight Program and Project Requirements, Section 5.5.2 Core E/PO Program, Section 7.2.1 Overview of Evaluation Criteria, Section 7.4.4 Downselection of Investigations.
- Correction of many dozens of typographical and formatting errors.

March 24, 2009 Revision incorporating clarifications made during development and approval of the Final New Frontiers AO

- Addition of new standard language, Section 4.2.1 Eligibility to Participate in this AO: Stated constraint's on The Aerospace Corporation's ability to respond to this AO and to participate in supporting analysis studies.
- Clarification of language with minor impact on policy or requirement: Section 4.1.2 NASA Program Management, Section 4.1.4 Remediation, Termination, or Cancellation, Section 4.5.1 Independent Verification and Validation, Section 5.5.2 Core E/PO Program, Section 5.6.7 Contributions, Section 7.2.4 Feasibility of the Mission Implementation Including Cost Risk, Appendix B General Requirements, Appendix B Section G Management.
- Clarification of language without change in policy or requirement: Section 4.1 NASA Management Policies, Section 4.1.1 NASA Flight Program and Project Requirements, Section 4.1.2 NASA Program Management, Section 4.3.1 PI-Managed

Mission Cost, Section 4.3.2 Total Mission Cost, Section 4.3.3 Enhanced PI-Managed Mission Cost, Section 4.4.1 Data Analysis, Section 4.4.3 Delivery of Data to Archive, Section 5.2.2 Accepted Management Processes and Practices, Section 5.3.1 Principal Investigator, Section 5.5.1 Small Business Participation, Section 5.5.3 Student Collaborations (optional), Section 5.6.6 Full Cost Accounting for NASA Facilities and Personnel, Section 6.2.1 Structure of the Proposal, Section 7.4.2 Award Administration and Funding, Section 7.4.4 Downselection of Investigations, Appendix C.1 Glossary of Terms, Appendix F Compliance Checklist.

- Correction of fewer typographical and formatting errors.

June 30, 2009 Revision incorporating corrections and clarifications made during editing of the Final New Frontiers AO and during the AO/Procurement Conversation on April 7, 2009

- Correction/clarification of language describing the contracting of selected and downselected investigations, Section 7.4 Implementation of Selected Proposals.
- Appendix B Section A.1 updated to better match NSPIRES output for Proposal Summary Information.
- Correction of even fewer typographical and formatting errors.
- Use of revised NASA brand, as required by the NASA Style Guide

October 6, 2009 Revision incorporating lessons learned from development of the Draft Discovery 2010 AO

- Addition of new standard language, Section 4.1.3 Mission Category and Payload Risk Classification. Option for proposer to propose mission categorization and risk classification.
- Addition of new standard language, Section 4.2.1 Eligibility to Participate in this AO. Clearly lays out options for limitations, if any, for Aerospace.
- Addition of new standard language, Section 5.1.5.4 Curation of Space Exposed Hardware. Lays out policy for curation of returned space exposed hardware.
- Addition of new standard language, Section 5.2.4 Environmental Review and Launch Approval. Complete revision of requirements for environmental review and launch approval.
- Addition of new standard language, Section 5.2.5 Telecommunications, Tracking, and Navigation. Restrictions on the use of DSN assets.
- Clarification of language with minor impact on policy or requirement: Section 4.4.3 Delivery of Data to Archive, Section 5.1.5.1 Planetary Protection, Section 5.3.2 Project Manager, Section 5.3.3 Management and Organization Experience and Expertise, Section 5.3.4 Risk Management, Section 5.5.2 Core E/PO Program, Section 5.6.2 Cost of the Phase A Concept Study, Section 5.6.3 Cost Estimating Methodologies and Cost Reserve Management, Section 5.9.2 Launch Services, Section 7.4.3 Conduct of the Phase A Study, Appendix B General Requirements, Appendix B Section A.3 Proposal team Member Commitment through NSPIRES, Appendix B Section F.2 Mission Concept Descriptions, Appendix B Section F.6 Schedule, Appendix B Section J.7 Discussion of End-of-Mission Spacecraft Disposal Requirements.

- Clarification of language without change in policy or requirement: Section 1.1, Section 3 Proposal Opportunity Period, Section 4.1.1 NASA Flight Program and Project Requirements, Section 4.1.4 Remediation, Termination, or Cancellation, Section 4.3.1 PI-Managed Mission Cost, Section 5.1.5.2 Curation of Returned Samples, Section 5.1.3 New Technologies/Advanced Development, Section 5.2.6 Critical Event Coverage, Section 5.2.7 End-of-Mission Spacecraft Disposal Requirements, Section 5.3.5 Compliance with Procurement Regulations by NASA PI Proposals, Section 5.5.1 Small Business Participation, Section 6.1.1 Preproposal Conference, Section 6.1.2 Notice of Intent to Propose, Section 7.2.3 Scientific Implementation Merit and Feasibility of the Investigation, Section 7.2.4 Feasibility of the Mission Implementation feasibility, Including Cost Risk.
- Correction of ever present typographical and formatting errors.

June 7, 2010 Revision incorporating lessons learned from development of the Discovery 2010 AO and the Draft Explorer 2010 AO

- NM 7120-81 is the NASA Interim Directive (NID) for NASA Procedural Requirements (NPR) 7120.5D. Effective September 22, 2009, NM 7120-81 is the governing NPR until HPR 1725.D is formally revised.
- Addition of new standard language, Section 4.1.2 NASA Program Management. Explicitly describe role of Program Office in AO process.
- Addition on new standard language, Section 4.1.3 NASA Center Role in Public Affairs and Outreach. Explicitly describe role of NASA Centers in public affairs and outreach.
- Recognition that the support contracts for both TMC (Section 4.2.1 Eligibility to Participate in this AO) and science panels (Section 6.2.3 Submission of Proposals) are being competed at this time.
- Addition of new standard language and a new requirement regarding systems engineering in Section 5.2.2 Accepted Management Practices and Processes.
- Addition of new standard language, Section 5.2.4 Environmental Review and Launch Approval. Addition of option for radioisotope calibration sources only.
- Revised language in Section 5.6.6 Full Cost Accounting for NASA Facilities and Personnel to be consistent with Agency's unified labor accounting practice.
- Recasting of evaluation factors in Section 7.2.4 Feasibility of the Mission Implementation, including Cost Risk, to align the AO language with the established practices of the Technical/Management/Cost evaluation managed by the Science Office for Mission Assurance (SOMA) at Langley Research Center. Also addition of standard language for evaluation of infused NASA-provided technology.
- Clarification in Section 7.4.1 Notification of Selection that proposal summary (abstract) information may be used in the Selection Statement whether or not the proposal is selected.
- Clarification of Bridge Phase in Section 7.4.2 Award Administration and Funding.
- Clarification of language with minor impact on policy or requirement: Section 4.4.1 Data Analysis, Section 4.4.3 Delivery of Data to Archive, Section 5.2.1 Complete Spaceflight Missions, Section 5.2.4.1 Environmental Review, Section 5.2.4.4 Accommodating Environmental Review and Launch Approval Requirements, Section

5.2.5 Telecommunications, Tracking, and Navigation, Section 5.2.6 Critical Event Coverage.

- Clarification of language without change in policy or requirement: Section 4.3.2 Total Mission Cost, Section 4.5.2 Earned Value Management Plan, Section 5.1.2 Traceability of Proposed Investigation, Section 5.1.5.1 Planetary Protection, Section 5.2.5 Telecommunications, Tracking, and Navigation, Section 5.6.3 Cost Estimating Methodologies and Cost Reserve Management, Section 6.1.1 Preproposal Conference. Correction of ever present typographical and formatting errors.

October 18, 2010 Revision incorporating lessons learned from development of the Explorer 2011 AO

- Revision of Section 4.5.2 Earned Value Management Plan to reflect changes between NPR 7120.5D and NM 7120-81 (will review again when NPR 7120.5E is released).
- New evaluation contractor in Section 4.2.1 Eligibility to Participate in this AO.
- New peer review contractor mailing address in Section 6.2.3 Submission of Proposals.
- Addition of SMD policy document SPD-18 to Section 5.5.2 Core E/PO Program.
- Table B4 NASA New Start Inflation Index has been updated to the FY10 Index.
- Clarification of language with minor impact on policy or requirement: Section 4.1.4 Mission Category and Payload Risk Classification, Section 4.2.1 Eligibility to Participate in this AO, Section 5.1.4 Baseline and Threshold Science Mission, Section 5.2.4 Environmental Review and Launch Approval, Section 5.2.5 Telecommunications, Tracking, and Navigation, Section 5.2.6 Critical Event Coverage, Section 5.3.3 Management and Organization Experience and Expertise, Section 5.9.2 Launch Services, Section 7.2.3 Scientific Implementation Merit and Feasibility of the Investigation, Section 8 Conclusion, Appendix B General Requirements, Appendix B Section A.1 Hardcopy Proposal, Appendix C.1 Glossary of Terms, Table B1, Table B2, Appendix D Program Library, Appendix F Compliance Checklist.
- Clarification of language without change in policy or requirement: Section 4.1.1 NASA Flight Program and Project Requirements, Section 4.1.2 NASA Program Management, Section 4.1.3 NASA Center Role in Public Affairs and Outreach, Section 4.1.4 Mission Category and Payload Risk Classification, Section 4.1.5 Remediation, Termination, or Cancellation, Section 4.2.1 Eligibility to Participate in this AO, Section 4.2.3 Responsibility of Principal Investigator for Implementation, Section 4.3.3 Enhanced PI-Managed Mission Cost, Section 4.4.3 Delivery of Data to Archive, Section 5.6.3 Cost Estimating Methodologies and Cost Reserve Management, Section 5.6.6 Full Cost Accounting for NASA Facilities and Personnel, Section 5.7.3 Agreements with Selected Non-U.S. Participants, Section 5.7.4 Export Control Guidelines, Section 6.1.4 Program Library and Acquisition Home Page, Section 7.4.4 Downselection of Investigations.

June 6, 2011 Revision incorporating lessons learned from development of the unreleased Jupiter Europa Orbiter AO, the Draft Earth Venture-2 AO, and the final Earth Venture-2 AO

- Revision of Section 4.2.1 to distinguish between language for Draft AOs and language for Final AOs; also revised conditions for use of Aerospace Corporation to conduct supporting analysis.
- Revision of Section 5.1.1 to require proposals to demonstrate that the investigation will achieve its objectives.
- Revision to Section 5.6.7 Contributions, Section 5.7.2 General Guidelines Applicable to Non-U.S. Proposals and Proposals including Non-U.S. Participation, and Section 7.2.4 Feasibility of the Mission Implementation, including Cost Risk to clarify the evaluation of proposals without mitigation plans for the coping with potential failures of proposed cooperative arrangements.
- Addition of Section 4.3.4 Mission Funding Profile to state NASA's limits on meeting funding profile requirements for the selected mission.
- Addition of Section 4.3.5 Availability of Appropriated Funds to state dependence of awards on NASA's budget process.
- Addition of Section 7.4.2 Principal Investigator-led Team Masters Forum to state requirement to attend a PI Forum after selection.
- Addition to Appendix B, Section A.2 Electronic Cover Page, of requirement to identify all participants not listed on the proposal cover page.
- Addition to Appendix B, Section G Management, and Appendix B, Section J.3 Resumes, of requirement to include PSE as a key management team member.
- Changed reference from NID NM1720-81 to NPR 7120.5D NID per direction from OCE.
- Clarification of language with minor impact on policy or requirement: Section 2.1 NASA Strategic Goals; Section 5.2.6 Critical Event Coverage; Section 5.3.3 Management and Organization Experience and Expertise; Section 5.5.1 Small Business Participation; Section 5.5.3 Student Collaborations (optional); Section 5.7.1 Overview of Non-U.S. Participation; Section 5.7.3 Agreements with Selected Non-U.S. Participants; Section 7.3 Selection Factors; Appendix B Section F.1 General Requirements and Mission Traceability; Appendix B Section J.9 Master Equipment List.

Questions about this Standard PI-Led Mission AO Template may be addressed to:

ANNOUNCEMENT OF OPPORTUNITY

<<PROGRAM NAME>> PROGRAM
NNHXXZDAXXO

FOREWORD

The National Aeronautics and Space Administration (NASA) Science Mission Directorate (SMD) is releasing this Announcement of Opportunity (AO) to solicit Principal Investigator (PI)-led space science investigations for the <<PROGRAM>> Program.

The PI Mission Cost cap for a <<PROGRAM>> mission is \$<<NUMBER>>M in Fiscal Year (FY) <<YEAR>> dollars, not including the cost of the Expendable Launch Vehicle (ELV) or any contributions. NASA expects to select up to <<NUMBER>> <<PROGRAM>> missions to proceed into Phase B and subsequent mission phases. The selected missions will launch no later than <<DATE>>.

Proposers should be aware of the following major changes in this AO from previous <<PROGRAM>> Program AOs.

- Reserves.
- Contributions.
- Launch services.
- Other special or new rules.
- Mission of Opportunity investigations are no longer solicited through the <<PROGRAM>> AO. Mission of Opportunity will be solicited through the Stand Alone Mission of Opportunity Notice (SALMON) AO.

This AO is based on SMD's Standard PI-Led Mission AO. In addition to the changes listed above, proposers should be aware of the following changes in this AO from the language in the Standard PI-Led Mission AO.

- Change 1 in Section 2.3.4.
- Change 2 in Section 4.5.6.

Proposers should be aware of the following major changes in this AO from the Draft <<PROGRAM>> AO released for community comment on <<DATE>>.

- The cost cap is now \$1B; this is specified in Section 5.6.7.
- Section 1.2.3 now requires something new.
- Sections 4.4.3 (*Title*), 8.4.2 (*Title*), Appendix B, Section H (*Title*) have been clarified.
- A new section 3.4.5, *Title*, has been.
- A new requirement for Something has been added (Section 5.6.7).

In addition to the listed major changes, this AO incorporates a large number of additional changes relative to previous <<PROGRAM>> Program AOs including both policy changes and changes to proposal submission requirements. All proposers must read this AO carefully, and all proposals must comply with the requirements, constraints, and guidelines contained within this AO.

ANNOUNCEMENT OF OPPORTUNITY

Appendix H: Certifications	H-1
AO OPTION: Additional appendices	

ANNOUNCEMENT OF OPPORTUNITY

<<PROGRAM NAME>> PROGRAM

NNHXXZDAXXXO

1. Description of Opportunity

1.1 Introduction

The National Aeronautics and Space Administration (NASA) issues this Announcement of Opportunity (AO) for the purpose of soliciting proposals for investigations to be implemented through its <<Program Name>> Program. All investigations proposed in response to this solicitation must support the goals and objectives of the <<Program Name>> Program (Section 2), must be implemented by Principal Investigator (PI) led investigation teams (Section 5.3.1), and must be implemented through the provision of complete spaceflight missions (Section 5.2.1).

Proposed investigations will be evaluated and selected through a two-step competitive process (Section 7). Step 1 is the solicitation, submission, evaluation, and selection of proposals prepared in response to this AO. As the outcome of Step 1, NASA intends to select approximately <<NUMBER>> Step 1 proposals and issue awards (provide funding to NASA Centers and the Jet Propulsion Laboratory (JPL), award contracts to non-NASA institutions, or utilize other funding vehicles as applicable) to the selected proposers to conduct Phase A concept studies and submit Concept Study Reports to NASA. Step 2 is the preparation, submission, evaluation, and continuation decision (downselection) of the Concept Study Reports. As the outcome of Step 2, NASA intends to continue up to <<NUMBER>> investigation(s) into the subsequent phases of mission development for flight and operations.

This AO, particularly Section 5, presents the requirements and constraints that apply to proposals that are to be submitted in response to this AO. Appendix B contains additional requirements on the format and content of the Step 1 proposal. Appendix D lists the contents of the Program Library while Appendix E.1 lists the Program Library documents that specify requirements for Phase A concept studies, and Appendix E.2 lists the Program Library documents that specify requirements that will apply to subsequent phases of investigations that are selected for implementation. These Program Library documents are intended to provide guidance for investigations selected in Step 1 and Step 2, respectively; they are specifically not intended to impose requirements on Step 1 proposals.

1.2 NASA Safety Priorities

Safety is the freedom from those conditions that can cause death, injury, occupational illness, damage to or loss of equipment or property, or damage to the environment. NASA's safety priority is to protect: (1) the public, (2) astronauts and pilots, (3) the NASA workforce (including NASA employees working under NASA instruments), and (4) high-value equipment and property.

2. AO Objectives

2.1 NASA Strategic Goals

One of NASA's strategic goals is to <<program specific text>>. Further information on NASA's strategic goals may be found in NASA Policy Directive (NPD) 1001.0, *The 2006 NASA Strategic Plan*, available through the Program Library (Appendix D).

The NASA Science Mission Directorate (SMD) is addressing this strategic goal by <<program specific text>>.

and is addressing the following research objectives: <<program specific text>>

Further information on the goals and objectives of NASA's <<Program Name>> program may be found in the *2010 Science Plan for NASA's Science Mission Directorate* and in the <<Program Name>> *Roadmap*, available through the Program Library.

2.2 <<Program Name>> Program Goals and Objectives

2.3 <<Program Name>> Program Background

3. Proposal Opportunity Period and Schedule

This solicitation has a single submission deadline. The following schedule describes the major milestones for this AO:

AO Release Date.....	<<DATE>>
Preproposal Conference.....	<<DATE + 3 weeks>>
Notice of Intent to Propose Deadline.....	<<DATE + 4 weeks>>
Proposal Submittal Deadline at 4:30 p.m. Eastern Time.....	<<DATE + 3 months>>
Letters of Commitment due (with proposal).....	<<DATE + 3 months>>
Step 1 Selections announced (target).....	<<DATE + 8 months>>
Initiate Phase A Concept Studies (target).....	<<DATE + 9 months>>
Phase A Concept Study Reports due (target).....	<<DATE 2>>
Downselection of investigation(s) for flight (target).....	<<DATE 2 + 5 months>>
Launch Readiness Date.....	NLT <<DATE 3>>

All proposals, U.S. and non-U.S., must be received before the proposal submittal deadline. Those received after the deadline will be treated in accordance with Appendix A, Section VII.

Requirement 1. Proposals submitted in response to this solicitation shall be delivered no later than the Proposal Submittal Deadline. Proposals shall be delivered to the Address for Submittal of Proposals given in Section 6.2.3.

Requirement 2. Proposal submission shall be accompanied by electronic submission of proposal summary data no later than the Proposal Submittal Deadline following the instructions for submission of proposal summary data provided in Section 6.2.4.

4. Policies Applicable to this AO

4.1 NASA Management Policies

The following policies will impose requirements on selected missions, for which planning may need to be considered and described as part of the proposal process. These requirements are not levied on Step 1 proposals.

4.1.1 NASA Flight Program and Project Requirements

Proposals selected in response to this AO will be implemented in accordance with NASA mission management processes. NASA mission management processes, as defined by NASA Procedural Requirements (NPR) 7120.5D NID¹, *NASA Space Flight Program and Project Management Requirements*, are Formulation, Approval, Implementation, and Evaluation. The NASA mission management processes are subdivided as follows:

Formulation is divided into:

- Phase A – Mission Concept and Requirements Definition and Technology Development; and
- Phase B – Preliminary Design and Technology Completion.

Approval is the Confirmation process for transitioning into Implementation.

Implementation is divided into:

- Phase C – Final Design and Fabrication;
- Phase D – System Assembly, Integration and Test, and Launch (extending through in-orbit checkout);
- Phase E – Operations and Sustainment; and
- Phase F – Closeout.

Evaluation is the ongoing independent review and assessment of the project's status during both Formulation and Implementation as described in NPR 7120.5D NID, which may be found in the Program Library.

A Key Decision Point (KDP) occurs before the project is approved to begin the next phase of development; KDPs are defined in NPR 7120.5D NID. For missions selected as a result of this AO, KDP-A is the selection of a Step-1 proposal for a Phase A concept study, KDP-B is the downselection of a mission to enter Phase B following evaluation of Concept Study Reports, KDP-C is the culmination of the Confirmation process, KDP-D is a transition that occurs after the Systems Integration Review, KDP-E is the handoff from development to operations, and KDP-F is the decision to terminate operations after completion of the mission. Scientific and other analyses [AO OPTION], including data analysis and preliminary analysis of returned samples,[END OPTION] may continue under project funding in Phase F. If the decision at downselection is to maintain the selected investigation in an extended Phase A, then a separate KDP-B will be required.

¹ NPR 7120.5D NID is the NASA Interim Directive (NID) for NPR 7120.5D. Effective September 22, 2009, NPR 7120.5D NID (document number NM 7120-81) is the governing NPR until NPR 7120.5D is formally revised.

4.1.2 NASA Program Management

Owing to the significant expenditure of Government funds on these space flight investigations, as well as to their expected complexity, NASA intends to maintain an essential degree of insight into mission development; NASA will exercise essential oversight to ensure that the implementation is responsive to NASA requirements and constraints. NASA requirements and constraints are spelled out in the <<Program Name>> *Safety, Reliability, and Quality Assurance Requirements* document, in NPR 7120.5D NID, and in other NASA requirements documents available in the NASA Online Directives Information System (NODIS, <http://nodis.hq.nasa.gov/>) and in the Program Library. The Associate Administrator for SMD has established a <<Program Name>> Program Office at the NASA <<Center Name>> Center to be responsible for project oversight. The <<Program Name>> Program Manager at the NASA <<Center Name>> Center reports to the <<Program Name>> Program Director at NASA Headquarters. Additional details about the program office staffing, structure, and goals can be found in the <<Program Name>> *Program Plan*, available through the Program Library.

NPR 7120.5D NID defines project management responsibilities, and it presumes that project management is assigned to a NASA Center or JPL. If an organization other than a NASA Center or JPL is proposed and selected to provide project management for an investigation, then the NASA Center's project management responsibilities under NPR 7120.5D NID will be assigned to the implementing project management organization. That organization must be prepared to carry out these responsibilities. In such cases, the <<Program Name>> Program Office at the NASA <<Center Name>> Center will retain the Technical Authority (TA), as described in NPR 7120.5D NID, that would otherwise be invested in an implementing Center or JPL.

The <<Program Name>> *Safety, Reliability, and Quality Assurance Requirements* document, available through the Program Library, will apply to investigations that are selected for Phase A concept studies. Selected investigations that reside at institutions that have NASA-approved safety and mission assurance (S&MA) programs may utilize their own institutional practices in lieu of the guidelines and requirements in this document. Although this document may impose requirements on selected investigations, it does not impose requirements, either implicitly or explicitly, on Step-1 proposals.

In addition to its role as the site of the <<Program Name>> Program Office, the NASA <<Center Name>> Center (<<Center Acronym>>) is eligible to participate in proposals that are submitted in response to this AO. The <<Program Name>> Program Office will have access to the AO before it is released; this is necessary so that the <<Program Name>> Program Office can review the AO and ensure that it correctly describes the postselection project management processes. Other than that, the <<Program Name>> Program Office plays no role in the AO process; specifically they play no role in defining the scientific scope of the AO, writing the AO, evaluating proposals, or selecting proposals. The Science Mission Directorate at NASA Headquarters will manage the evaluation and selection process. In order to manage <<Center Acronym>>'s two roles, SMD has established functional and organizational firewalls between the <<Program Name>> Program Office and those parts of <<Center Acronym>> that might participate in proposals. These firewalls ensure that personnel identified as supporting the <<Program Name>> Program Office and the AO process will protect all nonpublic information

from all proposers, including those at <<Center Acronym>>, and will be free of financial and other conflicts of interest with proposers.

4.1.3 NASA Center Role in Public Affairs and Outreach

Successful media relations activities require close cooperation between NASA and the selected investigations. NASA Centers and JPL have specific expertise in media relations and/or public affairs, especially as they pertain to Earth and space science missions. All selected investigations will coordinate media relations and/or public affairs with a NASA Center or JPL. If a selected investigation does not include a NASA Center or JPL as part of their investigation team, the investigation will utilize the public affairs guidance and resources of the <<Program Name>> Program Office at the NASA <<Center Name>> Center.

NASA is to be informed in a timely manner of any newsworthy mission event or issue before public release of information. Strategies for using new and social media also will be developed collaboratively to ensure that common and consistent messaging will occur in a timely manner. NASA and the selected investigation will establish and maintain a detailed coordination media relations plan and communications process.

Selected investigations also must work with NASA to ensure their mission website follows NASA requirements for incorporating content for the agency's primary public website at <http://www.nasa.gov/>. NASA, and through NASA the selected investigation, is required under the Information Quality Act (44 U.S.C. 3504(d)(1) and 3516) and associated guidelines to maximize the quality, objectivity, utility, and integrity of information and services provided to the public.

4.1.4 Mission Category and Payload Risk Classification

NPR 7120.5D NID, *NASA Space Flight Program and Project Management Requirements*, establishes guidelines for categorizing NASA missions based on the estimated total mission cost and mission priority level. The mission categorization guidelines are given in Section 2.1.4 and Table 2-1 of NPR 7120.5D NID.

NPR 8705.4, *Risk Classification for NASA Payloads*, establishes baseline criteria that enable a definition of the risk classification level for NASA payloads. It defines four payload risk levels or classes, A thru D, and provides guidance for programmatic options during development based on this class. The requirements for each class are specified in Appendix B of NPR 8705.4.

AO OPTION 1: <<Program Name>> missions selected from this AO have been determined to be Category <<Mission Category>> missions (per NPR 7120.5D NID) with Class <<Mission Class>> payloads (per NPR 8705.4). Proposers shall incorporate appropriate work effort and support in their proposals accordingly.

AO OPTION 2 [Note: When this option is used, Section 4.1.4 may be moved to Section 5 (between 5.2.7 and 5.2.8 so that there are no Requirements in Section 4.):

Requirement 3. Based on the criteria for mission categorization in NPR 7120.5D NID and risk classification in NPR 8705.4, proposers shall propose a mission categorization and risk

classification for their proposed mission. Proposers shall incorporate appropriate work effort and support in their proposals accordingly.

Proposed categorization and risk classification will be confirmed or modified by the NASA Decision Authority at selection points KDP-A and KDP-B. [END AO OPTION 2]

4.1.5 Remediation, Termination, or Cancellation

Any alteration of a mission that renders it unable to accomplish one or more of its baseline science objectives will be regarded as a descope of the investigation. NASA will review any such descoped set of achievable science objectives to ensure that the investigation remains at or above the Threshold Science Mission (see Section 5.1.3 of this AO). A descope made necessary by the PI's inability to remain within budget or schedule, or failure at any time during formulation and implementation to maintain a level of science return at or above the Threshold Science Mission, can result in mission cancellation accompanied by appropriate contract action, which may involve termination.

During Phase A, each selected PI will conduct a concept study. The Phase A Concept Study Report must include a commitment by the PI for the PI-Managed Mission Cost, schedule, and scientific performance of the investigation. If, at any time, the cost, schedule, or scientific performance commitments made in the Phase A Concept Study Report appear to be in peril, the investigation will be subject to termination or cancellation.

During Phase B, each selected PI will work with NASA to develop top-level science and technical performance requirements. Each PI will also work with NASA to establish a set of performance metrics for project evaluation with NASA. These will include cost, schedule, and others, as appropriate.

Once an investigation has been confirmed for implementation, failure of the PI to maintain reasonable progress within committed schedule and cost, and/or failure to operate within other applicable constraints, may be cause for NASA to convene a termination review. The Associate Administrator (AA) for the Science Mission Directorate may also call for a termination review any time an excursion above the agreed upon mission cost in Phase C through Phase E occurs, or is projected to occur, by the PI, the implementing organization, or NASA. The objective of such a review is to determine whether remedial actions, including changes in management structure and/or key management team members, would better enable the project to operate within established cost, schedule, and/or technical constraints. If a termination review determines that no remedy is likely to improve matters, NASA may consider mission cancellation and/or contract termination. NASA may cancel a mission and/or terminate a contract notwithstanding any international or domestic partnerships established to enable the mission

4.2 Participation Policies

4.2.1 Eligibility to Participate in this AO

Prospective investigators from any category of organizations or institutions, U.S or non-U.S., are welcome to respond to this solicitation. Specific categories of organizations and institutions that are welcome to respond include, but are not limited to, educational, industrial, and not-for-profit

organizations, Federally Funded Research and Development Centers (FFRDCs), University Affiliated Research Centers (UARCs), NASA Centers, the Jet Propulsion Laboratory (JPL), and other Government agencies.

[THE LANGUAGE FOR THE DRAFT AO RECOGNIZES THAT THE LIMITATIONS ON AEROSPACE CORPORATION MIGHT BE UNKNOWN AT THE TIME OF THE DRAFT AO. HERE IS THE LANGUAGE FOR THE DRAFT AO]

NASA contracts for the services of outside, non-Governmental organizations for support in evaluating proposals (see Section 7.1.1). Organizational conflicts of interest between proposing, evaluating, and executing organizations must be avoided. The approach to avoiding organizational conflicts of interest depends on the unique characteristics and roles of each evaluating organization. For non-Governmental organizations, this requires limiting the extent to which the outside evaluating organizations can participate in proposal development and/or execution of the work proposed. NASA has two general classes of limitation for organizations.

Full Limitation: The NASA contract with the outside organization for evaluation support under this AO creates an unmitigatable organizational conflict of interest for the evaluating organization in the event that any business unit of the organization has a proposed role as prime contractor, subcontractor, or participating organization. Because of this organizational conflict of interest, the evaluating organization is precluded from participating in any capacity in support of a respondent under this AO.

Partial Limitation: The NASA contract with the outside organization for evaluation support under this Announcement of Opportunity creates an organizational conflict of interest for the evaluating organization in the event that any business unit of the organization has a proposed role as prime contractor, subcontractor, or participating organization. Because of this organizational conflict of interest, the evaluating organization is precluded from responding to this AO, from participating as a member of any proposal performance team, and from being proposed as the recipient of any work awarded under this AO. Under appropriate circumstances, respondents to this AO may contract with the evaluating organization for supporting analysis services, including cost analysis, engineering analysis, and resource analysis, if it is deemed in the best interest of the Government and only under the following conditions.

- (i) The evaluating organization is precluded from responding to this AO, from participating as a member of any proposal performance team, and from being proposed as the recipient of any work awarded under this AO. The evaluating organization is precluded from providing or developing hardware, including any elements or components, that will be proposed for any work awarded under this AO. The evaluating organization should not be referenced in the proposal, nor should the evaluating organization's analysis be identified in the proposal.
- (ii) The evaluating organization has established firewalls within the organization to prevent conflicts of interest between organizational units and employees supporting NASA's evaluation of proposals and organizational units and employees supporting proposal efforts. Any supporting analysis services, including supporting cost analysis and supporting engineering analysis, provided to a proposal team must comply with the

firewall that has been established by the evaluating organization and is described in a NASA approved Organizational Conflict of Interest Avoidance Plan.

- (iii) The proposer shall fully describe in a memorandum submitted to NASA at the same time as the proposal all of the supporting analysis services provided by the evaluating organization to the proposing team. The memorandum must be signed by the proposing organization and must be concurred on by the evaluating organization. The memorandum shall not be bound into the proposal itself, but must be a separate document. This memorandum must describe all of the work provided by the evaluating organization, must identify any work products of the evaluating organization that are included in the proposal or its appendices, and must list all employees of the evaluating organization who participated in the work.

For this opportunity, two outside evaluating organizations may be used. In this case, their participation in proposed investigations is thus limited, as follows:

- Earth Resources Technology Inc. (ERT) will be subject to the “Full Limitation” described above. The NASA Evaluations, Assessments, Studies, Services, and Support (EASSS) contract with ERT creates an unmitigatable organizational conflict of interest for ERT in the event that any business unit of ERT has a proposed role as prime contractor, subcontractor, or participating organization. Because of this organizational conflict of interest, ERT is precluded from participating in any capacity in support of a respondent under this AO.
- The Aerospace Corporation is subject to either the “Partial Limitation” described above or to no limitation. The Aerospace Corporation, as the Federally Funded Research and Development Center (FFRDC) for space systems acquisition, is available to the U.S. Government and other organizations under the terms of its sponsoring agreement with the U.S. Air Force. The decision on whether to contract with Aerospace for support in evaluating proposals will be made at the time of the release of the final AO, and the final AO will include either a partial limitation or no limitation for Aerospace participation in proposal activities. Until the final AO is released, Aerospace Corporation has no limitation and is permitted to participate fully in all proposal activities. If Aerospace is subject to a partial limitation, respondents to this AO may contract with The Aerospace Corporation for supporting analysis services, including cost analysis, engineering analysis, and resource analysis only under the conditions described in paragraphs (i), (ii), and (iii) above.

[END OF LANGUAGE FOR DRAFT AO. BEGINNING OF LANGUAGE FOR FINAL AO, INCLUDING OPTIONS DEPENDING ON THE LIMITATIONS PLACED ON THE AEROSPACE CORPORATION.]

NASA contracts for the services of outside, non-Governmental organizations for support in evaluating proposals (see Section 7.1.1). Organizational conflicts of interest between proposing, evaluating, and executing organizations must be avoided. The approach to avoiding organizational conflicts of interest depends on the unique characteristics and roles of each evaluating organization. For non-Governmental organizations, this requires limiting the extent to which the outside evaluating organizations can participate in proposal development and/or execution of the work proposed.

The NASA Evaluations, Assessments, Studies, Services, and Support (EASSS) contract with Earth Resources Technology Inc. (ERT) for evaluation support under this AO creates an unmitigatable organizational conflict of interest for ERT in the event that any business unit of ERT has a proposed role as prime contractor, subcontractor, or participating organization. Because of this organizational conflict of interest, ERT is precluded from participating in any capacity in support of a respondent under this AO.

[AO OPTION 1] The NASA contract with The Aerospace Corporation (Aerospace) for evaluation support under this AO creates an unmitigatable organizational conflict of interest for Aerospace in the event that any business unit of Aerospace has a proposed role as prime contractor, subcontractor, or participating organization. Because of this organizational conflict of interest, Aerospace is precluded from participating in any capacity in support of a respondent under this AO. [END AO OPTION 1]

[AO OPTION 2] The NASA contract with The Aerospace Corporation (Aerospace) for evaluation support under this AO creates an organizational conflict of interest for Aerospace in the event that any business unit of Aerospace has a proposed role as prime contractor, subcontractor, or participating organization. Because of this organizational conflict of interest, Aerospace is precluded from responding to this AO, from participating as a member of any proposal performance team, and from being proposed as the recipient of any work awarded under this AO.

The Aerospace Corporation is a FFRDC, and it has unique capabilities and skills that are made available to the U.S. Government and other organizations under the terms of its sponsoring agreement with the U.S. Air Force. It is in NASA's best interest that, where appropriate and where it does not create organizational conflicts of interest, respondents to this AO be permitted to take advantage of these same capabilities and skills to improve their proposals. Under appropriate circumstances, respondents to this AO may contract with Aerospace for supporting analysis services, including cost analysis, engineering analysis, and resource analysis, if it is deemed in the best interest of the Government and only under the following conditions.

- (i) Aerospace is precluded from responding to this AO, from participating as a member of any proposal performance team, and from being proposed as the recipient of any work awarded under this AO. Aerospace is precluded from providing or developing hardware, including any elements or components, that will be proposed for any work awarded under this AO. Aerospace should not be referenced in the proposal, nor should the evaluating organization's analysis be identified in the proposal.
- (ii) Aerospace has established firewalls within the Aerospace organization to prevent conflicts of interest between Aerospace organizational units and employees supporting NASA's evaluation of proposals and Aerospace organizational units and employees supporting proposal efforts. Any Aerospace supporting analysis services, including supporting cost analysis and supporting engineering analysis, provided to a proposal team must comply with the firewall that has been established by Aerospace and is described in a NASA approved Organizational Conflict of Interest Avoidance Plan (OCIAP).

- (iii) The proposer shall fully describe in a memorandum submitted to NASA at the same time as the proposal all of the supporting analysis services provided by Aerospace to the proposing team. The memorandum must be signed by the proposing organization and must be concurred on by the evaluating organization. The memorandum shall not be bound into the proposal itself, but must be a separate document. This memorandum must describe all of the work that Aerospace provided, must identify any work products of Aerospace that are included in the proposal or its appendices, and must list all Aerospace employees who participated in the Aerospace work. [END AO OPTION 2]

[AO OPTION 3] The Aerospace Corporation will not be used for evaluation support. There is no limitation on the participation of Aerospace Corporation in any capacity under this AO.

4.2.2 Constraints on Investigations that are Candidates for Selection

Only those investigations that propose to meet cost, schedule, and launch vehicle requirements that do not exceed the constraints identified in this AO and that demonstrate sufficient margins, reserves, and resiliency to ensure mission success within committed cost and schedule, will be considered for selection.

4.2.3 Responsibility of Principal Investigator for Implementation

The primary responsibility for implementing and executing selected investigations rests with the PI, who will have latitude to accomplish the proposed objectives within committed schedule and financial constraints. This responsibility, however, will be exercised with essential NASA oversight to ensure that the implementation is responsive to the requirements and constraints of the <<Program Name>> Program.

4.2.4 NASA Concurrence for Replacement(s) of Key Team Members

Any replacement of key management team members (including, but not limited to, the PI and the Project Manager (PM)) requires concurrence by NASA.

4.3 Cost Policies

4.3.1 PI-Managed Mission Cost

PI-Managed Mission Cost is defined as the funding that the <<Program Name>> Program will be expected to provide to the PI's implementation team for the development and execution of the proposed project, Phases A through F. It includes any reserves applied to the development and operation of the mission as well. It also includes any costs that are required to be counted against the PI-Managed Mission Cost, even though the PI is not directly responsible for those costs (*e.g.*, NASA-provided telecom and network services described in Section 5.2.5). The PI-Managed Mission Cost is capped (see Section 5.6.1).

Examples of costs to be included in the PI-Managed Mission Cost, unless contributed, are: development activities (*e.g.*, instrument development, spacecraft development, management, software, testing); launch services outside of the standard services provided by NASA; Education/Public Outreach, including Student Collaborations in excess of the student collaboration incentive (see Section 5.5.3); subcontracting costs, including fees; science Co-Is and all other personnel required to conduct the investigation, analyze data and publish results,

and deliver data in an acceptable format to an approved archive; insurance; NASA-provided telecommunications, tracking, and/or navigation support; any program/project-specific costs (e.g., curation of returned samples); and all labor, including contractor and Civil Servant (NASA and non-NASA).

4.3.2 Total Mission Cost

Total Mission Cost is defined as the PI-Managed Mission Cost (see Section 4.3.1), plus any Student Collaboration costs up to the student collaboration incentive (see Section 5.5.3), plus any additional costs that are contributed or provided in any way other than through the <<Program Name>> Program (see Section 5.6.7). The Total Mission Cost will define the total value of the baseline investigation, not including the cost of standard launch vehicle and launch services.

4.3.3 Enhanced PI-Managed Mission Cost

Enhanced PI-Managed Mission Cost is defined as the funding that the <<Program Name>> Program will be expected to provide to the PI's implementation team for the development and execution of the proposed project, plus the optional components such as any Student Collaboration or Science Enhancement option (see Section 5.1.6). The Enhanced PI-Managed Mission Cost is the PI-Managed Mission Cost (see Section 4.3.1), plus any Student Collaboration costs up to the student collaboration incentive (see Section 5.5.3), plus any Science Enhancement Options (see Section 5.1.6).

4.3.4 Mission Funding Profile

The <<Program Name>> Program's planning budget can accommodate a selection at the cost cap with a typical funding profile over a nominal <<number>>-year development period. Proposers should propose a funding profile that is appropriate for their investigation and is consistent with the selection and launch readiness dates in Section 3 of this AO. Cost proposals whose requested funding profile significantly differs from the <<Program Name>> Program's planning budget for this AO may be difficult to accommodate and NASA cannot guarantee that the proposed funding profile can be accommodated within the <<Program Name>> Program's budget. In an extreme case, the inability of NASA to accommodate the requested funding profile may be a reason for nonselection of a proposal. A final funding profile for the selected mission will be negotiated.

4.3.5 Availability of Appropriated Funds

Prospective proposers to this AO are advised that funds are not in general available for awards at the time of its release. The Government's obligation to make awards is contingent upon the availability of sufficient appropriated funds from which payment can be made and the receipt of proposals that NASA determines are acceptable for award under this AO.

4.4 Data Policies

4.4.1 Data Analysis

The PI will be responsible for analysis of the mission data (including returned samples) necessary to complete the proposed science objectives and for timely publication of initial scientific results in refereed scientific journals, as part of their mission operations (Phase E) or post-mission (Phase F) activities. Data analysis [AO OPTION] and preliminary analysis of returned samples[END OPTION] may be continued during Phase F.

4.4.2 Data Rights

[OPTION 1] By NASA policy, all science data returned from NASA missions are immediately in the public domain. A short period of exclusive access may be proposed for data calibration and validation, but a compelling justification for it must be demonstrated. Any period of exclusive access should be the minimum that is consistent with optimizing science return from the mission. Barring exceptional circumstances, it may not exceed six months.

[OPTION 2] By NASA policy, all science data returned from NASA missions are immediately in the public domain. Following a postflight checkout period, all data will be made available to the user community. There shall be no period of exclusive access. The principal investigator will negotiate the data product latency period for standard products proposed, and a justification for it must be demonstrated. Barring exceptional circumstances, data product latency may not exceed six months.

4.4.3 Delivery of Data to Archive

Mission data will be made fully available to the public by the investigator team through a NASA-approved data archive (*e.g.*, the Planetary Data System, Atmospheric Data Center, High Energy Astrophysics Science Archive Research Center, Space Physics Data Facility, etc.), in usable form, in the minimum time necessary but, barring exceptional circumstances, within six months following its collection. The PI will be responsible for collecting the scientific, engineering, and ancillary information necessary to validate and calibrate the data prior to [OPTION 1] delivery to the archive. [OPTION 2 FOR EARTH SCIENCE] making it fully available. By the investigation closeout, the investigation will deliver all data products, along with the scientific algorithm software, coefficients, ancillary data used to generate these products, and the algorithm and calibration documentation to a NASA-assigned data center (*e.g.*, one of the Earth Observing System Data and Information System (EOSDIS) Distributed Active Archive centers (DAACs)). Information on EOSDIS and the DAACs is available at <http://esdis.eosdis.nasa.gov/eosdis/overview.html> and <http://esdis.eosdis.nasa.gov/dataaccess/datacenters.html>. [END OPTION 2]

Archival data products will include low-level (raw) data, high-level (processed) data, and derived data products such as maps, ancillary data [AO OPTION] (including valid SPICE (spacecraft, planet, instrument, C-matrix, events) kernels related to spacecraft, instrument, and body information) [END AO OPTION], calibration data (ground and in flight), documentation, related software, and/or other tools or parameters that are necessary to interpret the data. The PI will be responsible for generating data products that are documented, validated, and calibrated in physical units that are usable by the scientific community at large.

NASA data archives have budgets to support core activities, including the basic ingestion and review of new data. Proposed mission data archiving plans and budgets must be consistent with the policies and practices of the appropriate NASA data archive. [AO OPTION] For the Planetary Data System (PDS), guides to the archiving process and tools for data archive preparation may be downloaded from the PDS website (<http://pds.nasa.gov/tools/index.shtml>). Information on SPICE kernels may be found at the Navigation and Ancillary Information Facility (NAIF) of the PDS (<http://naif.jpl.nasa.gov/naif/>). For other archives, [END OPTION] proposers should contact the archive directly to obtain information regarding the appropriate policies and practices. [AO

OPTION FOR EARTH SCIENCE] For information on NASA Earth Science data policy, nomenclature, standards, and EOSDIS, see <http://science.nasa.gov/earth-science/earth-science-data/>. [END AO OPTION] Proposals may include funding for up to one year after end-of-operations for the generation and archiving of derived data products. This funding will be included in the capped PI-Managed Mission Cost.

4.5 Project Management Policies

4.5.1 Independent Verification and Validation of Software

The NASA Chief Safety and Mission Assurance Officer has the authority to select software projects to which Independent Verification and Validation (IV&V) is to be applied, as outlined in NPD 2820.1, *NASA Software Policy*. The selection of projects is based on prioritized recommendations from the Agency's IV&V Board of Directors. Proposal teams are encouraged to contact the Chief for Plans and Programs at the NASA IV&V Facility to gain a preliminary understanding of the potential level of safety and mission critical software that their project will contain and the associated project system software risks. If the project is selected to receive IV&V services, the costs for these services will be covered within the allocation to the NASA IV&V Program and need not be included in the proposed PI-Managed Mission Cost. Selected investigations will have to spend project funds only to provide required data and information to the IV&V facility. The Chief for Plans and Programs at the NASA IV&V Facility is Christina Moats (Telephone: 304-367-8340; E-mail: christina.d.moats@nasa.gov).

4.5.2 Earned Value Management Plan

For government entities, the earned value management (EVM) requirements are listed in NPR 7120.5D NID. For entities receiving contracts, the EVM requirements are listed in NFS 1852.234-2.

4.5.3 Cost Analysis Data Requirement (CADRe)

NASA has established a Cost Analysis Data Requirement (CADRe) in NPR 7120.5D NID, Section 4.5.2.c(3), that will apply to investigations selected through this AO. Support contractors funded directly by NASA Headquarters will perform the actual development of the CADRe; the costs for these services need not be included in the proposed PI-Managed Mission Cost. Selected investigations will have to spend project funds only to collect existing documentation and transmit it to the CADRe support contractor at selected major milestones and then to review the completed CADRe for completeness and accuracy.

4.5.4 Conjunction Assessment Risk Analysis

NASA has established a Conjunction Assessment Risk Analysis (CARA) requirement in NPR 8715.6A, Section 3.4, that will apply to investigations selected through this AO. A CARA team at NASA Goddard Space Flight Center is funded directly by NASA Headquarters to perform the actual analysis and risk assessment; the costs for these services need not be included in the proposed PI-Managed Mission Cost. Selected investigations will have to spend project funds only to establish a working interface between the Flight Operations Team and the CARA team to routinely share orbital ephemerides data and maneuvering plans.

5. Requirements and Constraints

This section provides general requirements on Step 1 proposals. Supplemental requirements on standard proposal content and format are provided in Appendix B.

5.1 Science Requirements

5.1.1 Scope of Proposed Investigation

A goal is understood to have a broad scope (*e.g.*, discover whether life exists elsewhere in the Universe; discover how and why the Earth's climate and the environment are changing), while an objective is understood as a more narrowly focused part of a strategy to achieve a goal (*e.g.*, identify specific chemical, mineralogical, or morphological features on Mars that provide evidence of past or present life there; understand and improve predictive capability for changes in the ozone layer, climate forcing, and air quality associated with changes in atmospheric composition). Proposed investigations must achieve their proposed objectives; however, the investigation might only make progress toward a goal without fully achieving it.

Requirement 4. Proposals shall describe a science investigation with goals and objectives that address the program science objectives described in Section 2.

Requirement 5. Proposals shall demonstrate how the proposed investigation will fully achieve the proposed objectives.

5.1.2 Traceability of Proposed Investigation

The <<Program Name>> Program is intended to perform focused science investigations that conclude with papers published in peer-reviewed archival journals, as well as deposition of appropriately reduced and calibrated data [AO OPTION]and derived products[END AO OPTION] in designated data archives (see Section 4.4.3)

Requirement 6. Proposals shall clearly state the relationship between the science objectives, the data to be returned, and the instrument complement to be used in obtaining the required data (see Appendix B, Section D, for additional detail).

Requirement 7. Proposals shall include a plan to calibrate (both preflight and inflight), analyze, publish, and archive the data returned, and shall demonstrate, analytically or otherwise, that sufficient resources have been allocated to carry out that plan within the proposed mission cost. The data plan shall discuss and justify any period of exclusive access to data or data latency period (see Appendix B, Section E, for additional detail).

5.1.3 Mission Science Objectives and Requirements

The ability to determine whether a proposed mission can successfully carry out the proposed science investigation depends on a well-formulated articulation of the proposed science objectives, the information and steps needed to bring closure to the objectives, and the measurements that must be obtained while conducting the mission. The proposed mission is evaluated against the standard of successfully delivering the required measurements.

Requirement 8. Proposals shall state the specific science objectives and their required measurements at a level of detail sufficient to allow an assessment of the capability of the proposed mission to make those specific measurements and whether the resulting data will permit achievement of these objectives (see Appendix B, Sections D and E, for additional detail).

Requirement 9. Proposals shall describe the proposed instrumentation, including a discussion of each instrument and the rationale for its selection.

5.1.4 Baseline and Threshold Science Missions

The Baseline Science Mission and the Threshold Science Mission are defined in NPR 7120.5D NID as follows:

The “Baseline Science Mission” is the mission that, if fully implemented, would fulfill the Baseline Science Requirements, which are the performance requirements necessary to achieve the full science objectives of the mission.

The “Threshold Science Mission” is a descoped Baseline Science Mission that would fulfill the Threshold Science Requirements, which are the performance requirements necessary to achieve the minimum science acceptable for the investment

The differences between the Baseline Science Mission and the Threshold Science Mission provide resiliency to potential cost and schedule growth in the proposed formulation and implementation plan. A descope is any alteration of a mission that renders it unable to accomplish one or more of the Baseline Science Mission science objectives, but allows accomplishment of all Threshold Science Mission science objectives.

NASA recognizes that, in some circumstances, the Threshold Science Mission may be identical to the Baseline Science Mission.

Requirement 10. Proposals shall specify only one Baseline Science Mission and only one Threshold Science Mission.

Requirement 11. Proposals shall not identify any descopes or other risk mitigation actions that result in the mission being unable to achieve the Threshold Science Mission objectives.

5.1.5 Planetary Protection and Sample Return Policies

AO OPTION: One or more of these sections are to be included in the AO only for programs to which they are applicable.

5.1.5.1 Planetary Protection

Investigations are subject to the established NASA policies and procedures that address forward contamination (transmittal from Earth to a targeted solar system body) and backward contamination (transmittal to Earth from the targeted body) with respect to other solar system bodies (see NPD 8020.7G, *Biological Contamination Control for Outbound and Inbound Planetary Spacecraft*; NPR 8020.12C, *Planetary Protection Provisions for Robotic Extraterrestrial Missions*; and NASA-HDBK-6022, *NASA Handbook for the Microbiological*

Examination of Space Hardware (DRAFT), in the Program Library). Note that forward contamination is of particular concern for Mars and for possible liquid water bodies within icy satellites.

Return of samples from certain target bodies may be subjected to rigorous containment and biohazard testing protocols in accordance with NASA planetary protection policy (see NPR 8020.12C, *Planetary Protection Provisions for Robotic Extraterrestrial Missions* and NASA/CP-2002-211842, *A Draft Test Protocol for Detecting Possible Biohazards in Martian Samples Returned to Earth*, in the Program Library).

Although not formally a part of planetary protection requirements, it is suggested that proposers request a preliminary planetary protection categorization of their mission from the Planetary Protection Officer (PPO) during the early stages of planning — even before proposal submission. Prior to a written request, the project is encouraged to communicate informally with the PPO.

For additional information, proposers may contact the NASA Planetary Protection Officer, Dr. Catharine A. Conley (Telephone: 202-358-3912; E-mail: cassie.conley@nasa.gov).

Requirement 12. Proposals that include an encounter with another solar system body, via flyby, orbiter, lander, or end of mission impact shall address plans for contamination control, as required by NPD 8020.7G and NPR 8020.12C; such investigations shall bear all additional costs generated by any special planetary protection requirements.

Requirement 13. Proposals that include the return of extraterrestrial samples shall address plans to comply with planetary protection requirements as required by NPD 8020.7G and NPR 8020.12C; such investigations shall bear all additional costs generated by any special planetary protection requirements.

See Appendix B, Section J.6.A, for additional detail.

5.1.5.2 Curation of Returned Samples

All samples of extraterrestrial planetary materials returned by NASA missions are NASA property (see NPD 7100.10E, *Curation of Extraterrestrial Materials*, in the Program Library). They shall be delivered to, and processed by, the NASA Astromaterials Curatorial Facility located at NASA's Johnson Space Center (JSC); contact Dr. Carlton Allen, Astromaterials Curator (Telephone: 281-483-5126; E-mail: jsc-astromaterials-curator@mail.nasa.gov; <http://curator.jsc.nasa.gov/>). The Curator will assist proposers in designing a curation plan that meets their mission's requirements for sample preservation and use (see the *NASA Policy on Curation of Extraterrestrial Materials* document in the Program Library.) The actual costs for all aspects of curation, from planning through distribution and storage, including all required laboratory construction or modification, shall be borne by the mission from inception to two years following sample return.

Requirement 14. Proposals that include the return of extraterrestrial samples shall provide a Sample Curation Plan. See Appendix B, Section J.6.B, for details.

Requirement 15. Proposals that include the return of extraterrestrial samples shall allocate funding for use of the JSC Curatorial Facility, including all aspects of curation.

5.1.5.3 Allocation of Returned Samples to Non-U.S. Partners

As a proportionate return for investment by non-U.S. partners in a mission that returns extraterrestrial materials, a fraction of the total returned sample may be forwarded to the national curatorial facility of the contributing country within six months after delivery to the NASA Astromaterials Curatorial Facility. The amount of samples so transferred must be no more than 25% of the total. Any material allocated to non-U.S. partners during the preliminary examination period must be included in this 25% limitation.

Requirement 16. Proposals that include the return of extraterrestrial samples shall specify the terms and conditions of selection of a sample fraction no greater than 25% for transmission to the contributing country, if appropriate.

In the event that the investigation is selected, the final arrangements for the transfer of a fraction of the sample to the contributing country must be established through an international agreement between NASA (with the approval of the Astromaterials Curator) and the contributing non-U.S. partner. NASA will negotiate the terms and conditions of the agreement.

5.1.5.4 Curation of Space-Exposed Hardware

It is the policy of the <<PROGRAM NAME>> Program that any space-exposed hardware returned to Earth will be made available to the science and engineering community for study. Such hardware must be delivered to and processed by the NASA Astromaterials Curatorial Facility located at NASA's Johnson Space Center (JSC). The Astromaterials Curator at the Johnson Space Center is responsible for the physical security, documentation, inventory accountability, environmental preservation, and distribution of any space-exposed hardware delivered to the Curatorial Facility. The Curator will assist proposers in designing a curation plan for returned space-exposed hardware. The actual costs for all aspects of curation, from planning through distribution and storage, including all required laboratory construction or modification, shall be borne by the mission from inception to two years following sample return.

Requirement 17. Proposals that include the return of space-exposed hardware shall include the curation of this hardware in their Sample Curation Plan. See Appendix B, Section J.6.B, for details.

Requirement 18. Proposals that include the return of space-exposed hardware shall allocate funding for use of the JSC Curatorial Facility to document, store and distribute hardware samples, including all aspects of curation.

5.1.6 *Science Enhancement Options*

Activities such as extended missions, guest investigator programs, general observer programs, participating scientist programs, interdisciplinary scientist programs, and/or archival data analysis programs, where appropriate, have the potential to broaden the scientific impact of investigations. Such optional activities may be proposed as Science Enhancement Options (SEOs).

NASA considers any proposed SEO activities as optional. Inclusion of such optional activities in a proposal does not imply a commitment from NASA to fund them, even if the baseline investigation is selected. NASA reserves the right to accept or decline proposed SEO activities at any time during the mission; in particular, the decision may not be made at the time the baseline investigation is selected for flight. The process for deciding on SEO activities may involve further reviews (*e.g.*, a “Senior Review” for extended missions). NASA reserves the right to solicit and select all participants (*e.g.*, guest investigators, archival data analysts, and participating scientists) in such programs.

Costs for proposed SEO activities must be defined, but will not count against the PI-Managed Mission Cost cap. Funding requested for SEO activities prior to Phase E should be minimized. As these proposed activities are optional and are not included within the cost capped baseline investigation, the science enabled by SEO activities is not considered as part of the scientific merit of the proposed investigation.

Requirement 19. If SEO activities are proposed, the proposal shall define and describe the proposed activities and their costs.

Requirement 20. If SEO activities are proposed, they shall be clearly separable from the Baseline Science Mission and Threshold Science Mission investigations.

Requirement 21. If an extended mission SEO is proposed, it shall conform to the guidelines provided in the *SMD Mission Extension Paradigm* document found in the Program Library.

See Appendix B, Section E, for additional detail.

5.2 Technical Requirements

5.2.1 Complete Spaceflight Missions

The term “complete” encompasses all appropriate mission phases (see Section 4.1) from project initiation (Phase A) through mission operations (Phase E), which must include analysis and publication of data in the peer reviewed scientific literature, delivery of the data to an appropriate NASA data archive, [AO OPTION] preliminary analysis of returned samples,[END AO OPTION] and, if applicable, extended mission operations or other science enhancements (see Section 5.1.6), and closeout (Phase F). The term “spaceflight missions” is defined as Earth orbital and deep-space missions; it specifically excludes suborbital missions (*e.g.*, via sounding rockets, balloons, and aircraft).

Requirement 22. Proposals submitted in response to this AO shall be for complete science investigations requiring a spaceflight mission.

Requirement 23. Proposals shall describe the proposed mission architecture and the rationale for each mission element.

Requirement 24. Proposals shall describe the proposed mission design and mission operations concept.

Requirement 25. Proposals shall describe the proposed flight system concept, including the spacecraft bus and its major subsystems.

Requirement 26. Proposals shall describe the development approach for implementing the proposed mission within schedule and cost constraints, including a project schedule.

[AO OPTION]Proposals traditionally considered as “data buys” are not permitted in response to this AO.[END AO OPTION]

See Appendix B, Section F, for additional detail.

5.2.2 Accepted Management Processes and Practices

The document NPR 7120.5D NID, *NASA Space Flight Program and Project Management Processes and Requirements*, delineates activities, milestones, and products typically associated with Formulation and Implementation of projects; it should be used as a reference in defining an Investigation Team’s management approach. The implementing organizations are free to propose their own processes, procedures, and methods for managing their missions; however, they must be consistent with the principles of NPR 7120.5D NID. Any deviations from NPR 7120.5D NID will require a waiver during formulation.

Requirement 27. Proposals shall describe the investigation's proposed management approach, including the management organization and decision-making process, the teaming arrangement, the responsibilities of the PI and other team members, and the risk management and risk mitigation plans (see Appendix B, Section G, for additional detail).

The document NPR 7123.1A, *NASA Systems Engineering Processes and Requirements*, clearly articulates and establishes the requirements on the implementing organization for performing, supporting, and evaluating systems engineering. This systems approach is applied to all elements of a system and all hierarchical levels of a system over the complete project life cycle. NPR 7123.1A should be used in defining the Investigation Team’s systems engineering approach. The implementing organizations are free to propose their own processes, procedures, and methods for systems engineering; however, they must be consistent with NPR 7123.1A.

Requirement 28. Proposals shall describe the investigation's proposed systems engineering approach, including plans, tools, processes for requirements, interfaces, and configuration management. (see Appendix B, Section F, for additional detail).

5.2.3 New Technologies/Advanced Developments

This AO solicits flight missions, not technology development projects. Proposed investigations are generally expected to have mature technologies, specifically all technologies at a Technology Readiness Level (TRL) of 6 or higher (TRLs are defined in NPR 7120.8, *NASA Research and Technology Program and Project Management Requirements*, Appendix J, which can be found in the NASA Online Directives Information System (NODIS) at <http://nodis3.gsfc.nasa.gov/>). Proposals with a limited number of less mature technologies are permitted as long as they

contain a plan for maturing all technologies to TRL 6 no later than KDP-C (Confirmation) and adequate backup plans in the event that the technologies cannot be matured as planned.

[AO OPTION] Section 5.9.3 of this AO provides guidelines for infusion of NASA-developed technologies. NASA SMD assumes the responsibility for maturing these technologies to TRL-6. Therefore, proposals that include utilization of one of these NASA-developed technologies will not be required to include a maturation plan for them. Proposals will, however, be required to include a plan for the infusion of these technologies (see Appendix B, Section J.13). [END AO OPTION]

Requirement 29. Proposals that use technologies [AO OPTION](other than NASA-developed technologies described in Section 5.9.3)[END AO OPTION] currently at less than TRL 6 shall include a plan for technology maturation and a backup plan (see Appendix B, Section F, for additional detail).

5.2.4 Environmental Review and Launch Approval

[START AO OPTION 1 – only radioisotope calibration sources]

Alternative section title: *Use of Radioactive Material*

This AO allows for investigations to baseline use of minor radiological calibration sources for science instrumentation. No radioactive material shall be used for supplemental power or heating.

The proposed use of radioactive materials of any quantity and any isotope, including radioactive calibration sources for science instruments, will require review for environmental impact and nuclear launch safety approval (NLSA). The environmental review requirements flow from the *National Environmental Policy Act* (NEPA) and are specified in NPR 8580.1, *Implementing the National Environmental Policy Act and Executive Order 12114*. The NLSA requirements are specified in NPR 8715.3, *NASA General Safety Program Requirements*, Chapter 6: “Nuclear Safety for Launching of Radioactive Materials.” The effort required for NLSA consists of concurrence from the NASA Office of Safety and Mission Assurance for low-level radioactive sources (*i.e.*, with an A2 mission multiple less than 10, as defined in NPR 8715.3, Chapter 6 and Appendix D).

Requirement 30. If use of radioactive materials is proposed for radiological calibration sources, the proposal shall include a listing of the estimated radioactive materials to be used (isotope, form, quantity). The proposal shall provide a rationale for the use of radioactive materials and reasonable, non-nuclear alternatives.

Requirement 31. The costs of environmental review and launch approval shall be included in the PI-Managed Mission Cost. The key milestones for environmental review and launch approval shall be accounted for in the proposed schedule.

Questions concerning environmental review requirements or NEPA may be addressed to Ms. Tina Norwood, NASA NEPA Program Manager, at (202) 358-7324 or by E-mail at nepa@hq.nasa.gov.

Questions concerning the NLSA process may be addressed to Mr. Peter Prassinis, NASA Coordinator for Nuclear Safety, Office of Safety and Mission Assurance, at (202) 358-1246 or by E-mail at peter.g.prassinis@nasa.gov.
[END AO OPTION 1]

[START AO OPTION 2 – includes RPS]

The process by which the environmental review and launch approval (if applicable) requirements are satisfied is referred to as “launch approval engineering.” Multiple organizations within NASA, and possibly outside of NASA, participate in this process. Although it is the responsibility of NASA to ensure that all such requirements are satisfied, missions will have to allocate resources to provide inputs into the process, participate in the development and implementation of any contingency plans or risk communication plans, and participate in launch approval reviews. Additionally, spacecraft and mission designs will have to take into account risk reduction and range safety issues.

5.2.4.1 Environmental Review

The *National Environmental Policy Act (NEPA) of 1969*, as amended (42 USC 4321 *et seq.*) is the nation's policy for the protection, maintenance, and enhancement of the environment. It requires NASA decision-makers to take environmental factors into account during the decision-making process. NASA is required to comply with NEPA for activities involving research and development, space flight activities, and program management. NASA implements NEPA using 14 CFR Part 1216.3, *Procedures for Implementing the National Environmental Policy Act*, NPR 8580.1, *Implementing the National Environmental Policy Act and Executive Order 12114*, and the Council on Environmental Quality (CEQ) *Regulations for Implementing the Procedural Provisions of NEPA* (40 CFR Parts 1500-1508).

NASA is responsible for determining the proper level of NEPA and related documentation required for a mission and ensuring that the process is completed during the preliminary design and technology development phase of a mission (per NPR 7120.5D NID, Section 4.5.2(2)). Depending on the potential environmental impacts of a selected mission, one of three levels of NEPA documentation will be required:

- Record of Environmental Consideration and a NASA Routine Payload (NRP) Checklist;
- Preparation of a mission unique Environmental Assessment (EA); or
- Preparation of a mission unique Environmental Impact Statement (EIS).

Questions concerning environmental review requirements or NEPA may be addressed to Ms. Tina Norwood, the NASA NEPA Program Manager, at (202) 358-7324 or by E-mail at nepa@hq.nasa.gov.

5.2.4.2 Use of Radioactive Material

The proposed use of radioactive materials of any quantity and any isotope, including radioisotope power sources, radioisotope heater units, or radioactive calibration sources for science instruments, will require review for environmental impact and nuclear launch safety approval (NLSA). The NLSA requirements are specified in NPR 8715.3, *NASA General Safety*

Program Requirements, Chapter 6: “Nuclear Safety for Launching of Radioactive Materials.” The effort required for NLSA varies between a concurrence from the NASA Office of Safety and Mission Assurance for low-level radioactive sources (*i.e.*, with an A2 mission multiple less than 10, as defined in NPR 8715.3, Chapter 6 and Appendix D) to a full interagency review and approval from the Executive Office of the President for radioisotope power sources or radioisotope heater units.

Requirement 32. If use of radioactive materials is proposed (including radioisotope power systems and radioisotope heater units), the proposal shall include a listing of the estimated radioactive materials to be used (isotope, form, quantity). The proposal shall provide a rationale for the use of radioactive materials and reasonable, nonnuclear alternatives.

This AO allows for missions to baseline use of minor radiological sources for science instrumentation and radioisotope heater units (RHUs). If RHUs are to be used in a mission proposed for this AO, NASA, under an agreement with the Department of Energy (DOE), will provide these, as well as the services associated with their provisioning on space missions. However, the use of RHUs is not without costs charged against the PI-Managed Mission Cost; missions will have to reimburse the Department of Energy for the cost of the RHUs (see Requirement 32) and fund the environmental and nuclear launch safety review processes (see Sections 5.2.4.1, 5.2.4.2, and 5.2.4.4).

Requirement 33. The costs of RHUs and their associated services and any minor sources shall be included within the PI-Managed Mission Cost (for pricing information, see the *Radioisotope Heater Unit Information Summary* document in the Program Library).

Launch processing of a mission that uses radioisotope power systems or radioisotope heater units is a nonstandard launch service that carries an additional cost against the PI Managed Mission Cost (see Section 5.9.2).

Questions concerning the NLSA process may be addressed to Mr. Peter Prassinis, NASA Coordinator for Nuclear Safety, Office of Safety and Mission Assurance, at (202) 358-1246 or by E-mail at peter.g.prassinis@nasa.gov.

5.2.4.3 Restricted Sample Return

If a mission plans on returning samples to the Earth from a Solar System body deemed by scientific opinion to potentially harbor indigenous life, a safety approval process with the Executive Office of the President will be necessary (see NPR 8020.12C). Specific planetary protection requirements for each planned mission will be determined by the NASA Planetary Protection Officer, in accordance NPR 8020.12C, and consistent with the policy and guidelines of the Committee on Space Research (COSPAR), recommendations of the Space Studies Board of the National Research Council (NRC), and advice from the NASA Advisory Council. The direct or indirect environmental effects that may be associated with sample return will have to be documented and the decision to approve the sample return will rest with the NASA Administrator and the Director of the Office of Science and Technology Policy (OSTP). Proposers are encouraged to review the *Sample Return Primer and Handbook* found in the Program Library.

5.2.4.4 Accommodating Environmental Review and Launch Approval Requirements

The costs associated with satisfying the requirements of the NEPA and NLSA are borne by a range of organizations. If an Advanced Stirling Radioisotope Generator (ASRG) is proposed to be used, the costs of safety analyses associated with its design of will be paid for by NASA. The launch of radioactive materials entails “nonstandard launch services” which are detailed in the *Launch Services Information Summary* document in the Program Library. The costs for these services must be included in the PI-Managed Mission Cost for missions not using ASRGs (see Section 5.9.2). The costs for the development of some NEPA and NLSA documents will also be considered part of the PI-Managed Mission Cost. These last costs vary depending on the attributes of the proposed mission, as shown in Table 1; the costs in Table 1 are to be used for proposal preparation and are firm, fixed costs; proposals should not add margin onto them. For proposal purposes, these costs should be treated as decrements to the PI-Managed Mission Cost Cap; there is no need to identify which year the costs will be expended nor to convert the costs into real year dollars.

Also shown in Table 1 are the key milestones that missions will have to accommodate in their scheduling. Only portions of the documents required to meet these milestones must be provided by the proposed mission; NASA, DOE, and their contractors will produce the majority of them. Proposed missions, however, must be cognizant of the environmental review and launch approval schedule constraints imposed by NASA’s processes.

Table 1: Key milestones and costs for launch approval processes.

Mission Attributes	Cost	Key Milestones
ASRG ASRG + RHUs ASRG + minor sources ASRG + RHUs + minor sources	\$17M	NEPA Notice of Intent: 21 months before CDR NEPA Databook: 16 months before CDR Final NEPA Document: 1 month before CDR SAR* Launch Vehicle Databook: 3 years before launch OSTP Request for Launch Approval: 6 months before launch Risk communication Plan: 21 months before CDR
RHU RHU + minor sources	\$19M [†]	NEPA Notice of Intent: 21 months before CDR NEPA Databook: 16 months before CDR Final NEPA Document: 1 month before CDR SAR Launch Vehicle Databook: 3 years before launch OSTP Request for Launch Approval: 6 months before launch Risk communication Plan: 21 months before CDR
Restricted Sample Return (ASRG outbound only)	\$22M	NEPA Notice of Intent: 21 months before CDR NEPA Databook: 16 months before CDR Final NEPA Document: 1 month before CDR SAR Launch Vehicle Databook: 3 years before launch OSTP Request for Launch Approval: 6 months before launch Risk communication Plan: 21 months before CDR
Restricted Sample Return (minor sources only)	\$14M	Final NEPA Document: PDR Nuclear Safety Review/Request Document: 5 months before launch
Restricted Sample Return (no ASRG or minor sources)	\$13M	Final NEPA Document: PDR
Minor sources with A2 mission multiple between 10 and 500.	\$800K	NEPA Notice of Intent: 21 months before CDR NEPA Databook: 16 months before CDR Final NEPA Document: 1 month before CDR LV Data for Nuclear Safety Review Document: 17 months before launch Nuclear Safety Review/Request Document: 5 months before launch Risk communication Plan: 21 months before CDR
Out of scope with NASA Routine Payload Environmental Assessment	\$500K	Final NEPA Document: PDR
Within scope of NASA Routine Payload Environmental Assessment	\$100K	Final NEPA Document: PDR

*SAR = Safety Analysis Report

[†] Extra safety analyses are needed for missions employing RHUs only. These analyses are included in the Government-furnished ASRGs.

The costs of environmental review and launch approval shall be included in the PI-Managed Mission Cost. The key milestones for environmental review and launch approval shall be accounted for in the proposed schedule.

Requirement 34. The costs of environmental review and launch approval shall be included in the PI-Managed Mission Cost. The key milestones for environmental review and launch approval shall be accounted for in the proposed schedule.

5.2.5 Telecommunications, Tracking, and Navigation

Use of NASA's Near-Earth Network, Space Network, or Deep Space Network (DSN) may be proposed, as appropriate. Points of contact and cost information for these services may be found in the *NASA's Mission Operations and Communications Services* document in the Program Library.

A cost estimation algorithm for the DSN and persons to contact to obtain costs for other networks and various Government operated facilities are contained in the *NASA's Mission Operations and Communications Services* document or at the DSN Future Missions Planning Office website at <http://deepspace.jpl.nasa.gov/advmis/>. For assistance with the cost calculation, contact the persons named on the website.

When the use of non-NASA communication services is proposed, NASA reserves the option of contracting for those services directly through its Space Communication and Navigation (SCaN) office. Further information may be obtained from the point of contact in the *NASA's Mission Operations and Communications Services* document. NASA funds may not be used for the construction of new facilities for non-NASA communications services.

Requirement 35. Proposals shall include mission requirements for telecommunications, tracking, and navigation; proposals shall also include a plan for meeting those requirements, including a cost plan, where the cost of development and use of telecommunications, tracking, and navigation services must be included within the PI-Managed Mission Cost cap whether or not NASA networks are used.

Where the use of NASA's network services is clearly within the capabilities and capacities described in the *NASA's Mission Operations and Communications Services* document, no Letter of Commitment is required from the NASA network provider.

Where the use of NASA's network services may not be within the capabilities and capacities described in the *NASA's Mission Operations and Communications Services* document, discussions should be initiated with the Point of Contact (POC) named in that document. In this case, a Letter of Commitment is required from the NASA network provider describing the network's ability to deliver the required capabilities and capacities and the cost for doing so.

It is SMD policy that only one DSN 34 meter antenna will be scheduled at the same time during normal operations of the selected <<PROGRAM NAME>> mission. It is SMD policy that none of the DSN 70 meter antennas may be proposed to support normal operations of the selected <<PROGRAM NAME>> mission. These restrictions do not apply to station hand-offs, critical event coverage, emergency services, radio science measurements, or navigation observations (e.g., delta differential one-way ranging or delta-DOR).

NASA intends to transition all deep-space missions launched after 2016 to the use of Ka-band for science data return (telemetry, tracking, and commanding (TT&C) data may still be transmitted using X-band). In order to better manage the Agency's transition to Ka-band service, proposed investigations shall baseline the use of Ka-band for science data return. The Space Frequency Coordination Group (SFCG) has recommended (Recommendation 23-1, available at

<https://www.sfcgonline.org/>) that X-band users be limited to using 12 MHz of spectrum in deep space and 8 MHz at Mars (where there are multiple missions). Where appropriate, these limits will be imposed on missions proposed to this AO.

Requirement 36. If use of NASA's network services is proposed, costs for services, as described in the *NASA's Mission Operations and Communications Services* document, must be included in the proposal's cost plan.

Requirement 37. If use of NASA's network services beyond the capabilities and capacities described in the *NASA's Mission Operations and Communications Services* document is proposed, the proposal shall include a Letter of Commitment from the NASA network provider; the Letter should confirm the ability of the network to provide the required capabilities and capacities and should include an estimate of the additional costs for these capabilities and capacities.

Requirement 38. Proposals shall baseline the use of Ka-band for science data return. If the use of Ka-band is inappropriate for the proposed investigation (based on the SFCG recommendations), then the proposal shall contain a justification for the use of an alternative communications approach.

Requirement 39. Proposals that propose the use of the DSN shall baseline the use of only one DSN 34 meter at any time for normal operations (not including periods of station hand-off). Proposals that propose the use of the DSN shall baseline the use of Ka-band for science telemetry. If the use of Ka-band is inappropriate for the proposed investigation, then the proposal shall contain a justification for the use of an alternative communications approach.

5.2.6 Critical Event Coverage

Critical events in the operation of a spacecraft are defined as those that must be executed successfully, usually in a single opportunity, as failure could lead to early loss or significant degradation of the mission if not executed successfully or recovered from quickly in the event of a problem.

NPR 8705.4, *Risk Classification for NASA Payloads*, requires that critical event telemetry be recovered for reconstruction of an anomaly, should one occur. Telemetry coverage is required during all mission critical events to assure data is available for critical anomaly investigations to prevent future recurrence. NPR 8705.4 provides examples of critical events. Critical event coverage may be provided in any fashion that is deemed appropriate for the proposed investigation.

Requirement 40. Proposals shall specify all critical events for the proposed mission and shall discuss the technical approach, required resources, and implementation concepts for providing critical event telemetry.

5.2.7 End-of-Mission Spacecraft Disposal Requirement

NPR 8715.6A, *NASA Procedural Requirements for Limiting Orbital Debris*, specifies that spacecraft are to limit the generation of orbital debris during operations and spacecraft disposal

requirements for all Earth- and Moon-orbiting spacecraft. Earth-orbiting spacecraft must be passivated at the end of the mission prior to disposal and be deorbited within 25 years of end-of-mission (or 30 years after launch, whichever comes first), or be placed in a disposal orbit above 2000 km but not within 300 km of geosynchronous orbit (GEO). Lunar missions must address disposal to avoid increasing the hazard to other spacecraft. Please note that NASA prefers powered controlled reentries for disposal.

Requirement 41. As applicable for Earth and Moon orbiters, proposals shall demonstrate satisfaction of the orbit disposal requirement by providing a mission lifetime analysis and indicating whether disposal is in orbit or with a reentry, either controlled or uncontrolled (see Appendix B, Section J.7, for additional detail).

5.2.8 Deviations from Recommended Payload Requirements

AO OPTION: <<PROGRAM NAME>> missions are required to meet the requirements for safety, reliability, and mission assurance in the <<PROGRAM NAME>> *Safety, Reliability, and Quality Assurance Requirements* document (see Program Library).

Requirement 42. Proposals shall indicate any expected deviations from the recommended requirements in the <<PROGRAM NAME>> *Safety, Reliability, and Quality Assurance Requirements* document and in Appendix B of NPR 8705.4 for the payload class specified in Section 4.1.4.

5.2.9 Mission Operations Tools and Services

NASA's Advanced Multi-Mission Operating System (AMMOS) comprises a set of tools and services that support the operations of robotic flight missions (see the AMMOS catalog at <http://ammos.jpl.nasa.gov/>). Use of AMMOS may be proposed, as appropriate. Points of contact and cost information for these services may be found in the Advanced Multi-Mission Operating System Services document in the Program Library.

5.3 Management Requirements

See Appendix B, Section G, for additional detail.

5.3.1 Principal Investigator

The PI is accountable to NASA for the success of the investigation, with full responsibility for its scientific integrity and for its execution within committed cost and schedule. Designation of a deputy PI is recommended, but not required.

The PI must be prepared to recommend project termination when, in her/his judgment, the minimum subset of science objectives identified in the proposal as the Threshold Science Mission (Section 5.1.3) is not likely to be achieved within the committed cost and schedule.

Requirement 43. Proposals shall identify and designate one, and only one, PI as the individual in charge of the proposed investigation.

5.3.2 Project Manager

The Project Manager (PM) oversees the technical and programmatic implementation of the project. The PM works closely with the PI in order to ensure that the mission meets its objectives within the resources outlined in the proposal.

Proposals may designate a Project Manager Alternate. At selection and subject to the approval of NASA, the Alternate may be named as the Project Manager. The qualifications of both the PM and the PM Alternate will be evaluated.

NASA will approve the PM at each transition to the next Phase of implementation as part of the KDP approval process.

Requirement 44. Proposals shall identify a single Project Manager as the individual charged with the responsibility for overseeing the technical and programmatic implementation of the proposed project. Proposals may optionally name a single Project Manager Alternate.

Requirement 45. Proposals shall clearly define the respective roles of the PI and PM.

5.3.3 Management and Organization Experience and Expertise

The qualifications and experience of the PI, PM, Project Scientist (PS), Project Systems Engineer (PSE), Project Manager Alternate (if named), and other key members of the PI-led Investigation Team must be commensurate with the technical and managerial needs of the proposed investigation.

The implementing institutions, selected and overseen by the PI, have the responsibility to ensure that the mission meets schedule and cost constraints. It is the PM and the implementing institutions' responsibility to provide the quality personnel and resources necessary to meet the technical and managerial needs of the mission. The commitment, spaceflight experience, and prior experience of the PI and of the implementing institutions will be assessed against the needs of the investigation.

Requirement 46. Proposals shall identify the management positions that will be filled by key management team members. These positions shall include, as a minimum, the PI, PM, PSE, Project Manager Alternate (if named), and, where appropriate, the PS and partner leads, especially partner leads for substantial efforts. For management positions for which key management team members are named (including the PI and PM per Requirement 43 and Requirement 44), proposals shall describe the qualifications and experience of those team members who occupy those positions. For management positions for which key management team members are not named, proposals shall describe the qualifications and experience required of any candidate to occupy those positions. For all positions that will be filled by key management team members, proposals shall demonstrate that the described qualifications and experience are commensurate with the technical and managerial needs of the proposed investigation.

Requirement 47. Proposals shall describe the qualifications and experience of the primary implementing institutions and demonstrate that they are commensurate with the technical and managerial needs of the proposed investigation.

5.3.4 Risk Management

Proposers must demonstrate clear understanding of specific risks inherent in the formulation and implementation of their proposed investigation and must discuss their approaches to mitigating these risks. Examples of such risks that must be discussed in the proposal are: any new technologies, or any nontrivial modifications or upgrades of existing technologies, proposed for the investigation; any validation of heritage technology for the mission context; any manufacturing, test, or other facilities needed to ensure successful completion of the proposed investigation; any need for long-lead items that must be placed on contract before the beginning of Phase C to ensure timely delivery; and any contributions that are critical to the success of the mission.

Requirement 48. Proposals shall define and discuss the major risks to the formulation and implementation of the proposed investigation.

Requirement 49. Proposals shall discuss management approaches to mitigate risks to ensure successful achievement of the investigation objectives within the committed cost and schedule.

The differences between the Baseline Science Mission and the Threshold Science Mission (see Section 5.1.4) may provide some resiliency to potential cost and/or schedule growth in the proposed formulation and implementation of the investigation. One method of responding to such growth is to descope the mission. Any set of descopes, which still allows the investigation to satisfy the objectives of the Threshold Science Mission, may be proposed.

Requirement 50. If the proposed risk management approach includes potential descoping of mission capabilities, the proposal shall include a discussion of the approach to such descopes, including savings of resources (mass, power, dollars, schedule, etc.) by implementing descopes, and the decision milestone(s) for implementing descopes.

Requirement 51. Proposals that include international participation shall address the risk resulting from any international contributions to the proposed mission (see Section 5.6.7 and Section 5.7).

5.3.5 Compliance with Procurement Regulations by NASA PI Proposals

Proposals submitted by NASA Centers are required to comply with regulations governing proposals submitted by NASA PIs (NASA FAR Supplement (NFS) 1872.308). Additional instructions may be found in Procurement Information Circular (PIC) 05-15 (see Program Library).

Requirement 52. Proposals submitted by NASA Centers shall contain any descriptions, justifications, representations, indications, statements, and/or explanations that are required by the regulations in NFS 1872.308 (see Appendix B, Section J.8, for additional detail).

5.4 Science Team, Co-Investigators, and Collaborators

5.4.1 Science Team

Requirement 53. Proposals shall clearly define the science team necessary to successfully conduct the science investigation.

5.4.2 Co-Investigators

A Co-Investigator (Co-I) is defined as an investigator who plays a necessary role in the proposed investigation and whose services are either funded by NASA or are contributed by his/her employer.

Every Co-I must have a role that is required for the successful implementation of the mission, and the necessity of that role must be justified. The identification of any unjustified Co-Is may result in the downgrading of an investigation and/or the offer of only a partial selection by NASA.

Requirement 54. Proposals shall designate all Co-Is, describe the role of each Co-I in the development of the mission, and justify the necessary nature of the role.

Requirement 55. Proposals shall identify the funding source for each Co-I. If funded by NASA, costs shall be included in the PI-Managed Mission Cost. If contributed, the costs shall be included in the Total Mission Cost.

5.4.3 Collaborators

A collaborator is an individual who is less critical to the successful development of the mission than a Co-I. A collaborator must not be funded through the proposal. A collaborator may be committed to provide a focused contribution to the project for a specific task, such as data analysis. If funding support is requested in the proposal for an individual, that individual must not be identified as a collaborator, but must be identified as a Co-Investigator or another category of team member.

Requirement 56. Proposals shall identify and designate all collaborators.

5.5 Small Business Participation and Education and Public Outreach

5.5.1 Small Business Participation

It is the policy of the Government when contracts are issued to emphasize subcontracting opportunities for small businesses. Offerors are advised that NASA is subject to statutory goals to allocate a fair portion of its contract dollars to small businesses, small disadvantaged business (SDB) concerns, Historically Black Colleges and Universities (HBCUs), and Other Minority Institutions (OMIs), as these entities are defined in Federal Acquisition Regulations (FAR) 52.219-8 and 52.226-2. Offerors are encouraged to assist NASA in achieving these goals by using best efforts to involve these entities as subcontractors to the fullest extent consistent with efficient performance of their investigations.

Offerors are advised that, by law, for NASA prime contracts resulting from this solicitation which offer subcontracting possibilities, exceed \$650,000, and are with organizations other than small business concerns, the clause at FAR 52.219-9 will apply. Offerors other than small businesses submitting a proposal are advised that a small business subcontracting plan is required with goals for subcontracting with small business (SB), small disadvantaged business (SDB), veteran-owned small business (VOSB), service-disabled veteran-owned small business (SDVOSB), Historically Underutilized Business Zone (HUBZone) small business (HBZ), women-owned small business (WOSB), HBCU, and OMI entities to the maximum practicable extent.

If offerors are able to demonstrate that subcontracting opportunities are not reasonably available in the performance of the Phase A concept studies, then subcontracting plans are not required for evaluation of Step 1 proposals leading to Phase A awards for project formulation.

Requirement 57. Proposals shall include a small business subcontracting plan for the Phase A concept study or demonstrate that one is not required (see Appendix B, Section I.1 for additional detail).

At the time the Phase A concept study report is delivered, regardless of whether subcontracting plans are submitted with the Step 1 proposal, offerors other than small business concerns are required to submit small business subcontracting plans, covering Phases B/C/D/E/F. Failure to submit a subcontracting plan will make the offeror ineligible for subsequent implementation and operation phases. As part of the Step 2 continuation (downselect) decision process, these subcontracting plans will be evaluated on the participation goals and quality and level of work performed by small business concerns overall, as well as that performed by the various categories of small business concerns listed in FAR 52.219-9, except for SDBs. Offerors will separately identify and will be evaluated on participation targets of SDBs in North American Industry Classification System (NAICS) codes determined by the Department of Commerce to be underrepresented industry sectors.

5.5.2 Core E/PO Program

Among NASA's strategic goals is to communicate the results of its efforts to the American public and to enhance the science and technical education of the next generation of Americans. All selected investigations will be required to implement a core Education and Public Outreach (E/PO) program consistent with SMD policy (see the *Explanatory Guide to the NASA Science Mission Directorate Educational and Public Outreach Evaluation Factors* document in the Program Library). However the quality of E/PO plans is not a consideration in the selection of Step 1 proposals for Phase A concept studies. Therefore, E/PO plans are not needed at this time. Detailed plans for E/PO programs are neither required nor permitted in proposals.

A plan for a core E/PO program will be developed during the Phase A concept study and will be included in the Concept Study Report. The quality of the E/PO plan contained in the Concept Study Report will be evaluated and will be a factor in the downselection for flight following Phase A; see *The Explanatory Guide to the NASA Science Mission Directorate Educational and Public Outreach Evaluation Factors* in the Program Library. The E/PO plan will be compliant

with SMD Policy Document SPD-18, *Policy and Requirements for the E/PO Programs of SMD Missions*, found in the Program Library.

The minimum allowable core E/PO program cost is defined to be 1% of the PI-Managed Mission Cost Cap [AO OPTION], but excluding any additions to the cost cap owing to TBD (see Section X.Y.Z) [END AO OPTION]. Missions must designate at least the minimum allowable core E/PO program cost for implementation of the core E/PO program. There is no maximum allowable cost for the core E/PO program; however, the funding for the core E/PO program must be included in the PI-Managed Mission Cost.

Core E/PO activities may continue for one year following end-of-prime-mission to allow for the incorporation of the results of the mission investigation into the core E/PO program.

Requirement 58. Proposals shall not designate an E/PO lead and proposals shall not include a plan for a core E/PO program.

Requirement 59. Proposals shall identify the funding set aside for the implementation of a core E/PO program; this funding shall be at least the minimum allowable core E/PO program cost and shall be included in the PI-Managed Mission Cost.

Requirement 60. Proposals shall include the following statement of commitment from the PI (see Appendix B, Section I.2, for additional detail):

“I understand the NASA SMD requirements for E/PO and I am committed to carrying out a core E/PO program that meets the goals described in the *Explanatory Guide to the NASA Science Mission Directorate Educational and Public Outreach Evaluation Factors* document. I will submit an E/PO plan with my Concept Study Report if this proposal is selected.”

5.5.3 Student Collaborations (optional)

Proposals may define a Student Collaboration (SC) that is a separate part of the proposed investigation. A SC can take the form of an instrument development, an investigation of scientific questions, analysis and display of data, development of supporting hardware or software, or other aspects of the investigation. The SC must be incorporated into the mission on a nonimpact basis. That is, the SC may not increase the mission development risk or impact the development or performance of the baseline science investigation in any way that would cause the baseline mission to be compromised in the event that the SC component is not funded; encounters technical, schedule, or cost problems; or fails in flight. A SC must be dependent upon the proposed mission being implemented, *e.g.*, require the provision of flight elements and/or access to science/engineering data generated by the mission. SC elements that involve only analysis of archival data may not be proposed. A SC may, but is not required to, have the potential to add value to the science or engineering of the mission. A SC must include appropriate plans for the mentoring and oversight of students to maximize the opportunity for teaching, learning, and success in contributing to the mission.

Although any proposed SC is an E/PO element, a SC may not be used as a component of the core E/PO program. If a proposed investigation is selected, NASA retains the option to fund or not to fund any proposed SC.

There is no minimum and no maximum allowable cost for a SC. NASA is providing a student collaboration incentive that is defined to be 1% of the PI-Managed Mission Cost Cap, [AO OPTION] but excluding any additions to the cost cap owing to TBD (see Section X.Y.Z) [END AO OPTION]. Contributions to the SC are permitted. The proposed NASA cost of the SC, up to the student collaboration incentive, may be outside of the PI-Managed Mission Cost. If the SC costs NASA more than the student collaboration incentive, then the rest of the NASA cost of the SC must be within the PI-Managed Mission Cost.

In the Step 1 evaluation, a proposed SC will be evaluated only for its impact on mission feasibility. The merit of the proposed SC will not be evaluated in the Step 1 evaluation; the merit of the proposed SC will be evaluated as part of the evaluation of the Step 2 Concept Study Report; see *The Explanatory Guide to the NASA Science Mission Directorate Educational Merit Evaluation Factors for Student Collaboration Elements* in the Program Library.

Requirement 61. If a proposal contains a SC, the proposal shall demonstrate that the proposed SC is clearly separable from the proposed Baseline and Threshold Science Mission investigations, to the extent that the SC will not impact the science investigation in the event that the SC is not funded; that the SC fails during flight operations; or that the SC encounters technical, schedule, or cost problems during development (see Appendix B, Section I.3, for additional detail).

Requirement 62. If a proposal contains a SC, the proposal shall identify the funding set aside for the SC; this funding may be outside the PI-Managed Mission Cost up to the student collaboration incentive, and any SC costs beyond the student collaboration incentive shall be within the PI-Managed Mission Cost.

5.6 Cost Requirements

5.6.1 PI-Managed Mission Cost and Total Mission Cost

The PI-Managed Mission Cost, including all mission phases, excluding the cost of launch vehicles (Section 5.9.2), is capped at \$<<NUMBER>> FY <<YEAR>> dollars.

Requirement 63. Proposals shall include the proposed PI-Managed Mission Cost and the proposed Total Mission Cost in all required AO cost tables (see Appendix B, Section H, for required AO cost tables).

Requirement 64. The proposed costs shall comply with the specified PI-Managed Mission Cost cap.

Requirement 65. No more than 25% of the proposed costs may be spent prior to KDP-C (Confirmation).

5.6.2 Cost of the Phase A Concept Study

Proposers selected through this AO will be awarded a contract to conduct a Phase A concept study with a duration of approximately <<NUMBER>> months following the establishment of initial contracts. The cost of the Phase A concept study is capped at \$<<NUMBER>> Real Year (RY) dollars. See Sections 7.4.2 and 7.4.3 for additional information on the Phase A concept study.

Requirement 66. Proposals shall include the cost of the Phase A concept study, which shall be included within the PI-Managed Mission Cost, and the proposed cost shall comply with the Phase A concept study cost cap.

The unique mission management approaches and organizational arrangements in the selected proposals may require the Program Office to implement varying contract administration and funding arrangements.

Requirement 67. Proposals shall specify the proposed teaming arrangements for the Phase A concept study, including any special contracting mechanisms that are advantageous for specific partners in the team. If more than one contractual arrangement between NASA and the proposing team is required, proposals shall identify how funds are to be allocated among the partnering organizations.

5.6.3 Cost Estimating Methodologies and Cost Reserve Management

As the provision of cost details is not anticipated until the conclusion of concept studies, proposals may use estimates derived from models or cost estimating relationships from analogous missions (see Appendix B, Section H, for additional detail).

Requirement 68. Proposals shall identify the methodologies (cost models, cost estimating relationships of analogous missions, etc.) and rationale used to develop the proposed cost.

Requirement 69. Proposals shall include a discussion of sources of estimate error and uncertainty in the proposed cost and management approaches for controlling cost growth.

Proposals that are unable to show adequate unencumbered cost reserves are likely to be judged a high cost risk and not selected. For the purpose of this AO, the unencumbered cost reserves on the PI-Managed Mission Cost are measured as a percentage against the cost to complete through Phases A/B/C/D[AO OPTION]/E. The numerator is the amount of unencumbered cost reserves for Phases A/B/C/D[AO OPTION]/E, not including funded schedule reserve. The denominator is the PI-Managed Mission Cost to complete Phases A/B/C/D[AO OPTION]/E, including the cost of technical design margin, including funded schedule reserve, not including cost reserve.

Adequate unencumbered cost reserves for Phases A/B/C/D are defined to be a minimum of 25%. Adequate unencumbered cost reserves must be demonstrated at each of the following milestones: KDP-A (demonstrated in the proposal), KDP-B (demonstrated in the Phase A Concept Study Report), KDP-C (the independent cost estimate for Confirmation), and KDP-D (at the end of Phase C), [AO OPTION] and KDP-E (at the start of Phase E, generally 30 to 90 days after launch).

Requirement 70. Proposals shall justify the adequacy of the proposed cost reserves, given that the proposed cost is not allowed to increase beyond the cost cap during Phase A or at any later time. Proposals shall comply with the requirement for unencumbered cost reserves against the cost to complete and shall demonstrate an approach to maintaining required unencumbered cost reserves through subsequent development [AO OPTION] and operations phases.

Requirement 71. [AO OPTION] Although minimum unencumbered cost reserves are not specified in this AO for Phases E and F, proposals shall establish, identify and justify adequate reserves for these phases of the mission.

5.6.4 Work Breakdown Structure

Requirement 72. Proposals shall provide a Work Breakdown Structure (WBS) that conforms to the standard prescribed in Appendix G of NPR 7120.5D NID. Costs for most elements shall be specified to WBS Level-2. Exceptions are the costs of elements which explicitly appear only at a level below WBS Level-2; these exceptions include individual instruments, unique flight system elements, the use of NASA or NASA-procured tracking and communications, and data analysis/archiving (see Appendix B, Section H, for additional detail).

5.6.5 Master Equipment List

Requirement 73. Proposals shall include a Master Equipment List (MEL) summarizing all flight element subsystem components and individual instrument element components to support validation of proposed mass estimates, design heritage, and cost (see Appendix B, Section J.9, for additional detail).

5.6.6 Full Cost Accounting for NASA Facilities and Personnel

For the purpose of calculating the full cost of NASA provided services for proposals submitted in response to this AO, proposal budgets from NASA Centers, whether as the proposing organization or as a supporting organization, are to include within the PI-Managed Mission Cost all costs required for the performance of the research effort. Even if the NASA civil servant labor and benefits costs will be covered by a civil service labor and expense account so that these costs will not be paid from the resulting award, they still must be accounted for within the PI-Managed Mission Cost.

All NASA civil servant labor costs, including salary and benefit costs, must be clearly identified by year within the budget justification section of the proposal.

Estimated NASA Center Management and Operations (CM&O) costs must be included to enable a level playing field for proposers. For the purpose of calculating the full cost of NASA provided services for proposals submitted in response to this AO, the CM&O burden should be applied only to NASA provided labor, including Center civil servants and on-site contractors.

Do not include within the cost proposal, nor within the PI-Managed Mission Cost, other costs not paid with <<PROGRAM NAME>> Program funds such as allocated service pools, Agency Management and Operations (AM&O, a.k.a. NASA Headquarters overhead), and any CM&O burden attributed to off-site contracts (pass-through dollars) and other cost elements.

Proposal budgets from NASA Centers, whether as the proposing organization or as a supporting organization, must include within the PI-Managed Mission Cost the following cost elements as appropriate and must separately identify them by element and by year:

- NASA civil servant direct labor including benefits;
- NASA civil servant travel;
- Other direct costs including non-civil servant demand service pools and procurements as identified in the NASA N-2 database; and
- The CM&O burden on NASA provided labor, including Center civil servants and on-site contractors.

Cost Elements for NASA Center Budget Proposals in response to SMD AOs

	Identify in proposal	Include in PI-managed mission cost	Funding source	Comments
Civil Service Labor	Yes	Yes	CASP	includes benefits
Civil Service Travel	Yes	Yes	SMD Program	
Other Direct	Yes	Yes	SMD Program	includes non-civil servant demand service pools and procurements as identified in the NASA N-2 database
CM&O	Yes	Yes	CASP	applied to NASA provided labor, including Center civil servants and on-site contractors
AM&O	No	No	CASP	includes NASA provided independent technical authority
NASA Contributed Costs	Yes	No	Identify	must be non-SMD
Non-NASA Federal Government (funding requested from NASA)	Yes	Yes	SMD Program	if NASA funding is requested for the non-NASA Federal Government agency
Contributions	Yes	No	Identify	includes all non-NASA contributions

Requirement 74. Proposals including costs for NASA Centers shall conform to the full cost policy stated in Section 5.6.6. Each of the elements of the NASA Center costs (direct labor, travel, other direct costs (procurements and demand service pools), CM&O) shall be separately identified by year.

If any NASA funded item(s) or services are to be considered as contributed costs, then the contributed item(s) must be separately funded by a non-SMD effort complementary to the proposed investigation, the value of the contribution(s) must be estimated, and the funding source(s) must be identified.

Requirement 75. If any NASA funded item(s) or services are considered as contributed costs, then the proposal shall estimate the value of the contribution(s) and shall identify the funding source(s).

Any non-NASA Federal Government costs must follow the appropriate agency accounting standards for full cost. If no standards are in effect, the proposers must follow the *Managerial Cost Accounting Concepts and Standards for the Federal Government*, as recommended by the Federal Accounting Standards Advisory Board and available in the Program Library.

Requirement 76. Proposals including costs for non-NASA Federal Government agencies shall follow the applicable accounting standards.

5.6.7 Contributions

Contributions from sources other than the <<Program Name>> Program and other SMD programs, U.S. or non-U.S., are welcome. These may include, but are not limited to, labor, services, and/or contributions to the instrument complement or the spacecraft, subject to the following exceptions and limitations: (i) contributions of non-U.S. nuclear power sources are prohibited; and (ii) in order to ensure a preponderance of NASA interest in the mission, as well as to ensure that missions of roughly comparable scope are proposed for purposes of equitable competition, the sum of contributions of any kind to the entirety of the investigation is not to exceed one-third (1/3) of the proposed PI-Managed Mission Cost. Such contributions will not be counted against the PI-Managed Mission Cost, but they must be included in the calculation and discussion of the Total Mission Cost (Section 4.3).

Values for all contributions of property and services must be established in accordance with applicable cost principles. The cost of contributed hardware must be estimated as either: (i) the cost associated with the development and production of the item, if this is the first time the item has been developed and if the mission represents the primary application for which the item was developed; or (ii) the cost associated with the reproduction and modification of the item (*i.e.*, any recurring and mission-unique costs), if this is not a first-time development. If an item is being developed primarily for an application other than the one in which it will be used in the proposed investigation, then it may be considered as falling into the second category (with the estimated cost calculated as that associated with the reproduction and modification alone).

The cost of contributed labor and services must be consistent with rates paid for similar work in the proposer's organization. The cost of contributions does not include funding spent before the start of the investigation (*i.e.*, before initiation of Phase B). The value of materials and supplies must be reasonable and must not exceed the fair market value of the property at the time of the contribution.

Requirement 77. If a proposal includes one or more contributions, the proposal shall identify all contributions, the organizations providing the contributions, and the organizations providing the funding for the contributions; the costs for the contributions shall be clearly identified within the Total Mission Cost.

Requirement 78. If a proposal includes one or more contributions, the total value of the contributions shall be established in accordance with the applicable and stated cost principles and shall comply with the stated cap on the sum of all contributions.

Letters of Commitment are required from each organization responsible for a contribution (for U.S. organizations, see Section 5.8.1.1 and Requirement 84; for non-U.S. contributing organizations, see Section 5.7.2 and Requirement 78).

The requirement for institutional Letters of Commitment for contributions does not apply to contributed support for Co-Investigators; no institutional Letters of Commitment are required with the Step 1 proposal for contributed Co-Investigator support. The requirement for personal statements of commitment from contributed Co-investigators is given in Section 5.8.1.3 and Requirement 86.

A contributed item that is essential for the success of the proposed investigation and/or is in the critical path of mission development is a risk factor. Risks include the failure of funding or contributions to materialize when they are outside the control of the PI. Mitigation may include, but is not limited to, descoping the contributed items and/or holding reserves to develop the contribution directly. When no mitigation is possible, this should be explicitly acknowledged (see Appendix B, Section H, for additional detail).

Requirement 79. If a proposal includes contributions that are essential to the success of the proposed investigation or in the critical path, the proposal shall include: (i) demonstrations of clear and simple technical and management interfaces in the proposed cooperative arrangements, (ii) explicit evidence that the proposed contributions are within the contributors' scientific and technical capabilities, and (iii) contingency plans for coping with potential failures of proposed cooperative arrangements or, where no mitigation is possible, an explicit acknowledgement to that effect.

[AO OPTION TO END OF SECTION]For proposals with contributed access to space (Section 5.9.4), all requirements in Appendix B must be met. Where a resource is being contributed (e.g., launch services, host spacecraft), all of the information required might not be available to the proposer (e.g. Appendix B, Section F.2). Nevertheless, the proposal must provide sufficient information on the availability of that resource for NASA to assess whether the mission's resource requirements can be met and how the PI will assure the mission's success.

Requirement 80. If a proposal includes contributed access to space, it must provide sufficient information for NASA to assess whether the mission's resource requirements can be met and how the PI will assure the mission's success.

5.7 Non-U.S. Participation Requirements

5.7.1 Overview of Non-U.S. Participation

NASA solicits research proposals from both U.S. and non-U.S. sources (see NFS 1835.016-70).

NASA's policies for international cooperation in space research projects may be found in NPD 1360.2B, *Initiation and Development of International Cooperation in Space and*

Aeronautics Programs. The characteristics of successful international cooperation include mutual benefits, clearly defined division of responsibilities, responsibilities for each participant within known capabilities, recognition of export control laws prohibiting the unwarranted transfer of technology abroad, and no-exchange-of-funds. Because space research projects generally involve major investments of resources, and because NASA is a Government agency, NASA's counterparts will generally be non-U.S. Government agencies rather than non-U.S. universities or private organizations.

Owing to NASA's policy to conduct research with non-U.S. entities on a cooperative, no-exchange-of-funds basis, NASA does not normally fund non-U.S. research proposals or non-U.S. research efforts that are part of U.S. research proposals. Rather, cooperative research efforts are normally implemented via agreements between NASA and the appropriate non-U.S. entity. Non-U.S. proposers, whether as primary proposers or as participants in U.S. research efforts, must arrange for non-U.S. financing for their portion of the research.

The direct purchase of supplies and/or services, which do not constitute research, from non-U.S. sources by U.S. award recipients is permitted.

5.7.2 General Guidelines Applicable to Non-U.S. Proposals and Proposals including Non-U.S. Participation

All non-U.S. proposals will undergo the same evaluation and selection process as those originating in the U.S. All proposals, U.S. and non-U.S., must be typewritten in English and must comply with all submission requirements stated in this AO and in Appendix B of this AO.

Requirement 81. Unless otherwise noted, proposals from non-U.S. entities shall not include a cost plan unless the proposal involves collaboration with a U.S. institution, in which case a cost plan that covers only the participation of the U.S. entity shall be included.

Requirement 82. Proposals from non-U.S. entities and proposals from U.S. entities that include non-U.S. participation shall be formally endorsed, through Letters of Commitment, by the responsible funding agency in the country of origin. The required elements in a Letter of Commitment for a contribution are given in Section 5.8.1. In addition to these required elements, endorsements from foreign entities shall indicate that the proposal merits careful consideration by NASA and that, if the proposal is selected, sufficient funds will be made available to undertake the proposed activity. Officials who are authorized to commit the resources of the non-U.S. funding agencies must sign these Letters of Commitment.

Contributions from non-U.S. sources offer benefits but also represent complexity and risk to a project. The stability and reliability of proposed partners, and the appropriateness of any proposed contribution, will be assessed as a programmatic risk element in the proposal.

Requirement 83. Proposals from U.S. proposers shall include a discussion of mitigation plans, where possible, for the failure of funding or contributions to materialize when they are outside the control of the PI. When no mitigation is possible, this should be explicitly acknowledged

Mitigation may include, but is not limited to, descoping the contributed items and/or holding reserves to develop the contribution directly. Note that reserves held for this purpose will be considered by NASA to be encumbered. When no mitigation is possible, this must be explicitly acknowledged. In addition to budget and technical risk, non-U.S. contributions introduce schedule risk for implementing agreements, as well as for obtaining any necessary licenses for exchanges of goods and technical data. An adequate and realistic schedule must be allocated for having international agreements executed. NASA will not normally initiate development of any international agreements until after the downselect decision is made at the conclusion of Phase A.

Any proposed non-U.S. participation must be described at the same level of detail as that of U.S. partners, including the provision of technical, schedule, and management data. Failure to document technical and schedule data, management approaches, or failure to document the commitment of team members or funding agencies may cause a proposal to be found unacceptable.

Requirement 84. Any proposed non-U.S. contribution essential to the success of the proposed investigation shall be described at the same level of detail as those of U.S. partners.

Requirement 85. Proposals with non-U.S. participation shall include a table listing: (i) non-U.S. participants (individuals, institutions), (ii) roles and responsibilities, (iii) funding organization, (iv) approximate value of contribution and method for estimating value, and (v) cross-reference to any Letters of Commitment in the proposal appendix. Proposals with non-U.S. participation must clearly describe the flow of design requirements (potentially export controlled information) and hardware between U.S. and non-U.S. participants. This description may take the form of a flowchart. See Section J.4 of Appendix B.

5.7.3 Agreements with Selected Non-U.S. Participants

Should a non-U.S. proposal or a U.S. proposal with non-U.S. participation be selected, NASA's Office of International and Interagency Relations will arrange with the non-U.S. sponsor for the proposed participation on a no-exchange-of-funds basis, in which NASA and the non-U.S. sponsor will each bear the cost of discharging its respective responsibilities.

It is the policy of NASA to establish formal agreements with non-U.S. partners in cooperation on flight missions. In some cases, interim agreements may be put in place, after the conclusion of Phase A, until a more permanent arrangement is reached.

Requirement 86. If applicable, proposals shall show how the Phase A concept study can be completed in the absence of an international agreement.

5.7.4 Export Control Guidelines Applicable to Non-U.S. Proposals and Proposals including Non-U.S. Participation

Requirement 87. Non-U.S. proposals and U.S. proposals that include non-U.S. participation shall describe plans for compliance with U.S. export laws and regulations, *e.g.*, 22 CFR Parts 120-130 and 15 CFR Parts 730-774, as applicable to the circumstances surrounding the particular non-U.S. participation (see Appendix B, Section J.5, for additional detail).

5.8 Additional Proposal Requirements

5.8.1 Letters of Commitment

Letters of Commitment signed by an institutional official must be provided from (i) all organizations offering contributions of goods and/or services (both U.S. and non-U.S., but excluding Co-I services) on a no-exchange-of-funds basis, including all non-U.S. organizations providing hardware or software to the investigation (see Section 5.6.7) and (ii) all major organizational partners in the proposal regardless of source of funding. See Appendix B, Section J.2, for additional detail.

The required elements in an institutional Letter of Commitment for a contribution are: (i) evidence that the institution and/or appropriate Government officials are aware and supportive of the proposed investigation; (ii) a precise description of what is being contributed by the partner and what assumptions are being made about NASA's role; (iii) a statement that the organization intends to provide the contribution or required funding for the investigation, if it is selected by NASA; (iv) the strongest possible statement of financial commitment from the responsible organization to assure NASA that all contributions will be provided as proposed, including whether the contribution and/or funding has been approved and/or what further decisions must be made before the funding is committed by the partner; and (v) a signature by an official authorized to commit the resource of the organization for participation in the investigation (if it is not clear from the signer's title that the signer has the necessary authority, then the signer's authority should be explicitly stated in the Letter).

The required elements in an institutional Letter of Commitment for a major partner are: (i) a statement of commitment for the effort that is assigned to that participant in the proposal, (ii) a description of what is being provided, and (iii) a signature by an official authorized to commit the organization.

5.8.1.1 Letters of Commitment for Contributions

An institutional Letter of Commitment for a contribution must contain the required elements described in Section 5.8.1.

Requirement 88. For all U.S. organizations offering contributions, proposals shall include appropriate Letters of Commitment from both the organization(s) providing any contributed property or service and from the organization(s) providing any required funding.

The requirement for Letters of Commitment from non-U.S. organizations offering contributions is given in Section 5.7.2 and Requirement 78.

5.8.1.2 Letters of Commitment for Major Partners

Major partners are the organizations, other than the proposing organization, responsible for providing science leadership, project management, system engineering, major hardware elements, science instruments, integration and test, mission operations, and other major products or services as defined by the proposer. All other participants are regarded as not major. Major partners are listed in Section (i) of the Table of Proposal Partners (see Appendix B, Section J.1, for additional detail).

An institutional Letter of Commitment for a major partner must contain the required elements described in Section 5.8.1.

Requirement 89. Unless otherwise explicitly exempted elsewhere in this AO (*e.g.*, Section 5.2.5), proposals shall include a Letter of Commitment from each major partner in the proposal, regardless of source of funding. For major partners providing one or more contributions, only a single Letter of Commitment is required.

5.8.1.3 Personal Letters of Commitment

No personal or institutional Letters of Commitment are required for co-investigators or other proposal team members in the Step 1 proposal. A proposal team member is defined to be any individual identified on the NASA Solicitation and Proposal Integrated Review and Evaluation System (NSPIRES) proposal cover page. Proposal team members indicate their commitment to the proposed investigation through NSPIRES (see Appendix B, Section A.3, for instructions). Requirements to provide personal and institutional Letters of Commitment in Step 2 Concept Study Reports are given in the *Guidelines and Criteria for the Phase A Concept Study* document (available in the Program Library).

Requirement 90. Every proposal team member shall indicate his/her commitment to the proposed investigation and specifically to the role, responsibilities, and participating organization proposed for him/her, through NSPIRES.

5.8.2 *Export Controlled Material in Proposals*

Under U.S. law and regulations, spacecraft and their specifically designed, modified, or configured systems, components, and parts are generally considered "Defense Articles" on the United States Munitions List and are, therefore, subject to the provisions of the International Traffic in Arms Regulations (ITAR), 22 CFR Parts 120-130.

While inclusion of export controlled material in proposals is not prohibited, proposers are advised that the inclusion of such material in proposals may complicate NASA's ability to evaluate proposals, as NASA may employ the services of non-U.S. citizens, who are not lawful permanent residents of the U.S., to review proposals submitted in response to this AO. In order to enable proper evaluation of proposals, any export-controlled information subject to ITAR must be marked with a notice to that effect.

Requirement 91. If the proposal contains export controlled material, the following statement shall be prominently displayed in Section A of the proposal (following the Proposal Summary Information):

"The information (data) contained in [insert page numbers or other identification] of this proposal is (are) subject to U.S. export laws and regulations. It is furnished to the Government with the understanding that it will not be exported without the prior approval of the proposer under the terms of an applicable export license or technical assistance agreement."

Note that it is the proposer's responsibility to determine whether any proposal information is subject to the provisions of ITAR. Information about U.S. export regulations is available at <http://www.pmddtc.state.gov/> and at <http://www.bis.doc.gov/>.

5.9 Program Specific Requirements and Constraints

5.9.1 [AO OPTION] Commitment for a Single Step Selection

For each selection, and unless otherwise stated in the selection letter, the selected mission's cost cap will be set at the proposal's proposed cost.

Requirement 92. Each proposal must include a commitment by the PI for the cost, schedule, and scientific performance of the investigation.

5.9.2 Schedule Requirements

Requirement 93. Proposals shall propose a launch readiness date no later than <<LAUNCH BY DATE>>.

5.9.3 Launch Services

A <<Program Name>> investigation will be launched as the primary payload on a single expendable launch vehicle (ELV) that NASA will provide as Government Furnished Equipment (GFE). Standard launch services utilizing a domestic launch vehicle certified as category 3 per NPD 8610.7D, *NASA Launch Services Risk Mitigation Policy for NASA-Owned or NASA-Sponsored Payloads/Missions*, regardless of the payload classification, will be provided at no charge to the PI-Managed Mission Cost. There will be a charge against the PI-Managed Mission Cost for any launch services beyond the standard launch services offered. Detailed information on launch vehicle performance options, including a description of standard launch services and the nominal costs for nonstandard services, is provided in the *ELV Launch Services Information Summary* document in the Program Library.

AO OPTION: The *ELV Launch Services Information Summary* describes four categories of launch vehicles in the intermediate performance class. The standard service will provide the least capable launch vehicle (standard performance class with a 4m fairing). A charge will be counted against the PI-Managed Mission Cost for investigations that require the use of more capable launch vehicles as shown in <<REFERENCE>>.

Funds allocated to the PI-Managed Mission Cost cannot be used to purchase a launch vehicle or standard launch services beyond those vehicles and services described in this AO.

AO OPTION: Co-manifested or secondary payloads on a U.S. or non-U.S. launch vehicle may not be proposed or considered under this AO.

Requirement 94. Proposals shall define the required launch vehicle capability and demonstrate that it is compatible with the standard launch services offered.

Requirement 95. If services beyond the standard launch services offered are required, the proposal shall include the cost of such services in the PI-Managed Mission Cost.

Launch delay costs as a result of spacecraft or payload delays are not a standard launch service. Any such launch delay costs must be funded out of the PI-Managed Mission Cost and, therefore, represent a cost risk to the PI-Managed Mission Cost.

AO OPTION: For investigations using radioactive materials, an as-built databook for the launch system (*i.e.*, payload and launcher) must be completed under the NASA Launch Services contract no later than three years before launch. Launch processing of a mission that utilizes radioactive materials (*e.g.*, radioisotope heating units) will involve nonstandard launch services. The costs for these services will be included in the PI-Managed Mission Cost. Costs associated with the launch of radioactive materials are shown in <<REFERENCE>>.

AO OPTION 1: No contributions allowed

Contributed launch services cannot be proposed or considered under this AO.

AO OPTION 2: Contributions of launch services allowed

The provision of launch services, as a contribution to a <<Program Name>> mission by a U.S. or non-U.S. partner, can be proposed only if the following requirements are met: (i) The contributed launch services must be provided on a no-exchange-of-funds basis (*i.e.*, at no cost to SMD). (ii) The value of the contributed launch services must be within the constraint on contributions (see Section 5.6.7). (iii) The proposer must secure the organization(s) that will contribute launch services. (iv) The proposer must identify the launch opportunity in the proposal and must provide evidence in the proposal that the launch service provider agrees to manifest the mission should the proposal be selected and confirmed for flight by NASA. (v) For any co-operative contributed launch services, the approach for NASA's insight for launch services must be submitted in the proposal. Contributed launch services will be handled by NASA consistent with existing policy and regulations. The demonstrated reliability and the resultant probability of mission success for contributed launch services will be evaluated by NASA consistent with *U.S. Space Transportation Policy* (see Section 5A) and NASA's *Launch Services Risk Mitigation Policy* (NPD 8610.7D, *NASA Launch Services Risk Mitigation Policy for NASA-Owned or NASA-Sponsored Payloads/Missions*). The contributed launch service will be assessed in conjunction with NASA stakeholders as part of the selection process. The NASA Flight Planning Board will approve final mission assignment assuring consistency with Agency risk strategy. Information on the reliability of ELVs may be obtained from the point of contact listed in the *Launch Services Information Summary* (Program Library).

Requirement 96. If a contributed launch service is proposed, the proposal shall demonstrate compliance with all of the requirements for contributed launch services given in Section 5.9.2.

AO OPTION - include if applicable: Due to the volatility of the launch services market, NASA cannot ensure which launch vehicles will be available at the time of the launch deadline specified in Section 5.9.1. Accordingly, proposers are advised to plan for compatibility with vehicle families that provide the required performance and are expected to be available through spacecraft Preliminary Design Review (PDR; see the *ELV Launch Services Information*

Summary in the Program Library). It is recommended that payload designs accommodate launch environments for these vehicle families.

Requirement 97. AO OPTION - include if applicable: Proposals shall discuss flexibility to be accommodated on multiple launch vehicle families.

5.9.4 Technology Infusion

AO OPTION – Program specific language.

5.9.5 Program Infrastructure Requirements and Opportunities

AO OPTION – Program specific language.

6. Proposal Submission Information

6.1 Preproposal Activities

6.1.1 Preproposal Conference

A Preproposal Conference will be held in <<LOCATION>>, in accordance with the schedule in Section 3. Further information, including logistics, will be available at the <<Program Name>> Acquisition Homepage (see Section 6.1.4) prior to the Preproposal Conference.

All interested parties may attend. All expenses and arrangements for attending this meeting are the responsibility of the attendees. Note that travel and associated costs of attendance are not allowable as direct costs under another Federal Government award, *e.g.*, a contract, grant, or cooperative agreement. Government employees may attend and be authorized travel and associated costs as a matter of official business.

The purpose of this conference will be to address questions about the proposal process for this AO. Questions should be sent to the <<Program Name>> Program Scientist at the address given in Section 6.1.5. NASA personnel will address all questions that have been received no later than five working days prior to the Conference. Questions submitted after this date may be addressed at the Conference as time permits and as appropriate answers can be generated. Anonymity of the authors of all questions will be preserved. Presentations made at the Preproposal Conference, including answers to all questions addressed at the conference, will be posted on the <<Program Name>> Acquisition Homepage at the address given in Section 6.1.4 two weeks after this event. Additional questions and answers subsequent to the conference will also appear in this location, if necessary. Questions may be submitted until 14 days before the proposal due date given in Section 3. It is expected that all questions and answers will be posted on the <<Program Name>> Acquisition Homepage at the address given in Section 6.1.4.

6.1.2 Notice of Intent to Propose

To assist the planning of the proposal evaluation process, NASA strongly encourages all prospective proposers to submit a Notice of Intent (NOI) to propose, before the NOI submittal deadline specified in Section 3. Material in a NOI is deemed confidential and will be used for NASA planning purposes only. Submission of a NOI is not required for the submission of a proposal to this solicitation. Those who submit NOIs will receive any <<Program Name>>

Program updates or AO amendments that may occur, up to the time of the proposal submittal deadline (see also Section 6.1.4).

A NOI is submitted electronically by entering the requested information at <http://nspires.nasaprs.com/>. Registration on the NSPIRES website is required to submit NOIs and proposals. Proposers who experience difficulty in using the NSPIRES site should contact the Help Desk by E-mail at nspires-help@nasaprs.com for assistance.

The following information (to the extent that it is known by the NOI due date) is requested for the NOI:

- (a) Name, address, telephone number, fax number, E-mail address, and institutional affiliation of the PI.
- (b) Full names and institutional affiliations of each known Co-I. If any Co-Is or other proposal team members are from non-U.S. institutions, the vehicle by which these people expect to be funded should be identified in the comments box on the NOI form.
- (c) Anticipated launch vehicle performance class.
- (d) A brief statement (150 words or less) for each of the following:
 - (i) science objectives of the proposed mission;
 - (ii) identification of new technologies that may be employed as part of the mission.
- (e) The name of the organizational lead from each organization (industrial, academic, nonprofit, and/or Federal) included in the proposing team, and the organization's role in the proposed investigation, as may be known at the time of the NOI.

6.1.3 Teaming Interest

As a result of recent AOs similar to this one, commercial aerospace and technology organizations have requested a forum to inform potential proposers of their services and/or products. NASA is willing to offer this service with the understanding that the Agency does not endorse any information thus transmitted and does not accept responsibility for the capabilities or actions of these organizations. The organizations listed on the <<Program Name>> Teaming Interest page of the <<Program Name>> Acquisition Homepage (see address given in Section 6.1.4) have expressed interest in teaming with other organizations on <<Program Name>> proposals. This is not a comprehensive list of organizations that are capable of teaming; it is simply a list of those organizations that have asked to be included. Proposers are not required to team with any organization on this list.

6.1.4 Program Library and Acquisition Home Page

The <<Program Name>> Program Library provides additional regulations, policies, and background information on the <Program Name>> Program. Information on the Program Library is contained in Appendix D. The Program Library is described in Appendix D and is accessible at <<Program Library URL>>.

A <<Program Name>> Acquisition Homepage, available at <<Acquisition Homepage URL>>, will provide updates and any AO addenda during the <<Program Name>> AO solicitation process. It will provide links to the Program Library, information about the preproposal conference, a list of potential proposers and teaming partners, and questions and answers regarding the AO.

Updates to the AO and any amendments will be posted on the NSPIRES website. A link will be provided on the <<Program Name>> Acquisition Homepage to the NSPIRES index page for the AO.

6.1.5 Point of Contact for Further Information

Inquiries about this AO may be directed to the <<Program Name>> Program Scientist:

Dr. (NAME)
(NAME) Division
Science Mission Directorate
National Aeronautics and Space Administration
Washington, DC 20546-0001
Telephone: 202-358-<<NUMBER>>
E-mail: (NAME)@nasa.gov

6.2 Proposal Preparation and Submission

6.2.1 Structure of the Proposal

General NASA guidance for proposals is given in Appendix A of this AO, which is considered binding unless specifically amended in this AO. A uniform proposal format is required from all proposers to aid in proposal evaluation. The required proposal format and contents are summarized in Appendix B. Failure to follow Appendix B may result in reduced ratings during the evaluation process or, in some cases, could lead to rejection of the proposal without review.

Requirement 98. Proposals shall conform to the uniform proposal format outlined in Appendix B.

6.2.2 Certifications

The authorizing institutional signature on the proposal certifies that the proposing institution has read and is in compliance with the three required certifications printed in full in Appendix H. Therefore, it is not necessary to separately submit these certifications with the proposal.

If the certifications need to be amended, they may be submitted as an additional proposal appendix.

6.2.3 Submission of Proposals

Requirement 99. The original signed proposal and <<NUMBER OF COPIES>> paper copies, each of which contains an attached, clearly labeled CD-ROM that contains electronic proposal files (see Appendix B), shall be delivered to the following address by the proposal submittal deadline specified in Section 3. [Partially repeats Requirement 1]

NASA Research and Education Support Services (NRESS)
Suite 500
2345 Crystal Drive
Arlington, VA 22202

Phone for commercial delivery: 202-479-9030

NASA will notify proposers that their proposals have been received. Proposers who have not received this confirmation within two weeks after submittal of their proposals should contact the <<Program Name>> Program Scientist at the address given in Section 6.1.5.

Proposals received after the submittal deadline will be treated in accordance with Appendix A, Section VII.

6.2.4 Electronic Submission of Proposal Summary Information

This AO requires that proposal summary information, referred to as the Electronic Cover Page, must be submitted electronically through NSPIRES, NASA's master proposal database system located at <http://nspires.nasaprs.com/>. This data site is secure and all information entered is strictly for NASA's use.

Potential proposers should access this site well in advance of the proposal due date to familiarize themselves with its structure and to enter the requested identifier information. Every individual named as a proposal team member on the proposal's Electronic Cover Page must be registered in NSPIRES. Such individuals must register themselves; that is, no one may register a second party, even the PI of a proposal in which that person is committed to participate. The proposal's Electronic Cover Page must be submitted electronically by one of the officials at the proposing organization who is authorized to make such a submission. Every organization that intends to submit a proposal to NASA in response to this AO must be registered in NSPIRES. Such registration must be performed by the organization's Electronic Business Point-Of-Contact (EBPOC) in the Central Contractor Registry (CCR).

Requirement 100. The proposing organization and all individuals named as proposal team members on the Electronic Cover Page shall be registered in NSPIRES.

All proposal team members shall indicate their commitment to the proposed investigation through NSPIRES (see Requirement 86).

The same proposal summary information must be submitted on the Electronic Cover Page as is in Section A of the proposal. The Electronic Cover Page may be submitted either before or after the proposal is submitted, as long as the Electronic Cover Page is submitted no later than the proposal due date given in Section 3. This means that the Electronic Cover Page may be finalized after the proposal is completed to ensure that the Electronic Cover Page has identical information as Section A of the proposal. Alternatively the Electronic Cover Page may be submitted first and a printout of the Electronic Cover Page may be included in Section A of the proposal.

Requirement 101. The Electronic Cover Page shall contain information that is identical to the information contained in Section A of the proposal.

Requirement 102. The Electronic Cover Page shall be submitted in NSPIRES by an authorized organizational representative (AOR) of the proposing organization, and it shall be submitted by the proposal submittal deadline specified in Section 3. [Partially repeats Requirement 2]

Frequently Asked Questions (FAQs) on the use of NSPIRES can be accessed through the NSPIRES Proposal Online Help site at <http://nspires.nasaprs.com/external/help.do>.

Additional instructions for submitting the Electronic Cover Page are given in Appendix B, Section A.2.

7. Proposal Evaluation, Selection, and Implementation

7.1 Overview of the Proposal Evaluation and Selection Process

7.1.1 Evaluation Process

All proposals will be initially screened to determine their compliance to requirements and constraints of this AO. Additional compliance checks occur during the evaluation process. Proposals that do not comply may be declared noncompliant and returned to the proposer without further review. A submission compliance checklist is provided in Appendix F. This checklist provides proposers a list of the items that NASA will check for compliance before releasing a proposal for evaluation. This checklist is for the convenience of proposers; it is not required to be submitted as part of a proposal.

Compliant proposals will be evaluated against the criteria specified in Section 7.2 by panels of individuals who are peers of the proposers. Proposals will be evaluated by more than one panel (*e.g.*, a science panel and a technical/management/cost panel); each panel will evaluate proposals against different criteria. Panel members will be instructed to evaluate every proposal independently without comparison to other proposals. These panels may be augmented through the solicitation of nonpanel (mail in) reviews, which the panels have the right to accept in whole or in part, or to reject.

Proposers should be aware that, during the evaluation and selection process, NASA may request clarification of specific points in a proposal; if so, such a request from NASA and the proposer's response must be in writing. In particular, before finalizing the evaluation of the feasibility of the mission implementation (see Section 7.2.4), NASA will request clarification on specific, potential major weaknesses in the feasibility of mission implementation that have been identified in the proposal. NASA will request clarification in a uniform manner from all proposers. The ability of proposers to provide clarification to NASA is extremely limited, as NASA does not intend to enter into discussions with proposers. A typical limited response is to direct NASA's attention to pertinent parts of the proposal without providing further elaboration.

A proposal evaluation plan template can be found in the Program Library.

7.1.2 Categorization and Steering Process

An *ad hoc* categorization subcommittee of the SMD AO Steering Committee, composed wholly of Civil Servants and Intergovernmental Personnel Act appointees (some of whom may be from Government agencies other than NASA) and appointed by the Associate Administrator for the

Science Mission Directorate, will convene to consider the peer review results and, based on the evaluations, categorize the proposals in accordance with procedures required by NFS 1872.403-1(e). The categories are defined as follows:

Category I. Well conceived and scientifically and technically sound investigations pertinent to the goals of the program and the AO's objectives and offered by a competent investigator from an institution capable of supplying the necessary support to ensure that any essential flight hardware or other support can be delivered on time and data that can be properly reduced, analyzed, interpreted, and published in a reasonable time. Investigations in Category I are recommended for acceptance and normally will be displaced only by other Category I investigations.

Category II. Well-conceived and scientifically or technically sound investigations which are recommended for acceptance, but at a lower priority than Category I.

Category III. Scientifically or technically sound investigations which require further development. Category III investigations may be funded for development and may be reconsidered at a later time for the same or other opportunities.

Category IV. Proposed investigations which are recommended for rejection for the particular opportunity under consideration, whatever the reason.

A sitting panel of the SMD AO Steering Committee will then review the results of the evaluations and categorizations. The AO Steering Committee will conduct an independent assessment of the evaluation and categorization processes regarding their compliance to established policies and practices, as well as the completeness, self-consistency, and adequacy of all supporting materials.

7.1.3 Selection Process

After the review by the AO Steering Committee, the final evaluation results will be presented to the Associate Administrator for the Science Mission Directorate, who will make the final selection(s). As the Selection Official, the SMD Associate Administrator may consult with senior members of SMD and the Agency concerning the selections.

As part of the selection decision, a decision will be made as to whether or not any Category III proposals will receive funding for technology development.

7.2 Evaluation Criteria

7.2.1 Overview of Evaluation Criteria

The evaluation criteria, which are defined more fully in the following sections and will be used to evaluate proposals as described in Section 7.1.1, are as follows:

- The scientific merit of the proposed investigation;
- The scientific implementation merit and feasibility of the proposed investigation; and

- The technical, management, and cost (TMC) feasibility of the proposed approach for mission implementation, including cost risk.

The proposal categorizations, discussed in Section 7.1.2, will be based on these criteria. For categorization, scientific merit is weighted approximately 40%, scientific implementation merit and feasibility is weighted approximately 30%, and TMC feasibility, including cost risk, is weighted approximately 30%.

These criteria are defined more fully in the following sections. Evaluation findings for each evaluation criterion will be documented with narrative text in the form of specific major and minor strengths and weaknesses, as well as an adjectival summary score. The adjectival summary scores for the first two criteria (scientific merit and scientific implementation merit) will be reported as Excellent, Very Good, Good, Fair, or Poor, as defined in the table below.

Summary Evaluation	Basis for Summary Evaluation
<u>Excellent</u>	A comprehensive, thorough, and compelling proposal of exceptional merit that fully responds to the objectives of the AO as documented by numerous and/or significant strengths and having no major weaknesses.
<u>Very Good</u>	A fully competent proposal of very high merit that fully responds to the objectives of the AO, whose strengths fully outbalance any weaknesses.
<u>Good</u>	A competent proposal that represents a credible response to the AO, having neither significant strengths nor weakness and/or whose strengths and weaknesses essentially balance.
<u>Fair</u>	A proposal that provides a nominal response to the AO, but whose weaknesses outweigh any perceived strengths.
<u>Poor</u>	A seriously flawed proposal having one or more major weaknesses (e.g., an inadequate or flawed plan of research or lack of focus on the objectives of the AO).

The third criterion, technical merit and feasibility, including cost risk, will be reported as Low Risk, Medium Risk, or High Risk, as defined in the table below.

Summary Evaluation	Basis for Summary Evaluation
<u>Low Risk</u>	There are no problems evident in the proposal that cannot be normally solved within the time and cost proposed. Problems are not of sufficient magnitude to doubt the Proposer's capability to accomplish the investigation well within the available resources.
<u>Medium Risk</u>	Problems have been identified, but are considered within the proposal team's capabilities to correct within available resources with good management and application of effective engineering resources. Mission design may be complex and resources tight.
<u>High Risk</u>	One or more problems are of sufficient magnitude and complexity as to be deemed unsolvable within the available resources.

7.2.2 Scientific Merit of the Proposed Investigation

The information provided in a proposal will be used to assess the intrinsic scientific merit of the proposed investigation. Scientific merit will be evaluated for the Baseline Science Mission and the Threshold Science Mission; science enhancement options beyond the Baseline Science Mission will not contribute to the assessment of the scientific merit of the proposed investigation. The factors for scientific merit include the following:

- Factor A-1. Compelling nature and scientific priority of the proposed investigation's science goals and objectives. This factor includes the clarity of the goals and objectives; how well the goals and objectives reflect program, Agency, and National priorities; the potential scientific impact of the investigation on program, Agency, and National science objectives; and the potential for fundamental progress, as well as filling gaps in our knowledge relative to the current state of the art.
- Factor A-2. Programmatic value of the proposed investigation. This factor includes the unique value of the investigation to make scientific progress in the context of other ongoing and planned missions; the relationship to the other elements of NASA's science programs; how well the investigation may synergistically support ongoing or planned missions by NASA and other agencies; and the necessity for a space mission to realize the goals and objectives.
- Factor A-3. Likelihood of scientific success. This factor includes how well the anticipated measurements support the goals and objectives; the adequacy of the anticipated data to complete the investigation and meet the goals and objectives; and the appropriateness of the mission requirements for guiding development and ensuring scientific success.
- Factor A-4. Scientific value of the Threshold Science Mission. This factor includes the scientific value of the Threshold Science Mission using the standards in the first factor of this section and whether that value is sufficient to justify the proposed cost of the mission.

Factors A-1 through A-3 are evaluated for the Baseline Science Mission assuming it is implemented as proposed and achieves technical success. Factor A-4 is similarly evaluated for the Threshold Science Mission.

This evaluation will result in narrative text, including specific major and minor strengths and weaknesses, as well as an appropriate adjectival rating for the scientific merit of the investigation.

7.2.3 Scientific Implementation Merit and Feasibility of the Investigation

The information provided in a proposal will be used to assess merit of the plan for completing the proposed investigation, including the scientific implementation merit, feasibility, resiliency, and probability of scientific success of the proposed investigation. The factors for scientific implementation merit and feasibility include the following:

- Factor B-1. Merit of the instruments and mission design for addressing the science goals and objectives. This factor includes the degree to which the proposed mission will address the goals and objectives; the appropriateness of the selected instruments and mission design for addressing the goals and objectives; the degree to which the proposed instruments and mission can provide the necessary data; and the sufficiency of the data gathered to complete the scientific investigation.
- Factor B-2. Probability of technical success. This factor includes the maturity and technical readiness of the instruments; the adequacy of the plan to develop the instruments within the proposed cost and schedule; the robustness of those plans, including recognition of risks and mitigation plans for retiring those risks; the likelihood of success in developing any new technology that represents an untested advance in the state of the art; the ability of the development team - both institutions and individuals - to successfully implement those plans; and the likelihood of success for both the development and the operation of the instruments within the mission design.
- Factor B-3. Merit of the data[OPTION 1] analysis, data availability, and data archiving plan. [OPTION 2] and/or sample analysis plan.[END OPTIONS] This factor includes the merit of plans for data [OPTION 1] analysis and [OPTION 2]and/or sample analysis [END OPTIONS], data archiving, and/or sample curation to meet the goals and objectives; to result in the publication of science discoveries in the professional literature; and to preserve data and [OPTION 1]analysis[OPTION 2]samples[END OPTIONS] of value to the science community. Considerations in this factor include assessment of planning and budget adequacy and evidence of plans for well-documented, high-level data products and software usable to the entire science community; assessment of adequate resources for physical interpretation of data; [OPTION 2]an assessment of the planning and budget adequacy and evidence of plans for the preliminary evaluation and curation of any returned samples;[END OPTION 2] reporting scientific results in refereed journals; and assessment of the proposed plan for the timely release of the data to the public domain for enlarging its science impact.
- Factor B-4. Science resiliency. This factor includes both developmental and operational resiliency. Developmental resiliency includes the approach to descoping the Baseline Science Mission to the Threshold Science Mission in the event that development problems force reductions in scope. Operational resiliency includes the ability to withstand adverse circumstances, the capability to degrade gracefully, and the potential to recover from anomalies in flight.

- Factor B-5. Probability of science team success. This factor will be evaluated by assessing the experience, expertise, and organizational structure of the science team and the mission design in light of any proposed instruments. The role of each Co-Investigator will be evaluated for necessary contributions to the proposed investigation; the inclusion of Co-Is who do not have a well defined and appropriate role may be cause for downgrading of the proposal.
- Factor B-6. Merit of any science enhancement options (SEOs), if proposed. This factor includes assessing the appropriateness of activities selected to enlarge the science impact of the mission; the potential of the selected activities to enlarge the science impact of the mission; and the appropriate costing of the selected activities. The peer review panel will inform NASA whether the evaluation of the proposed SEO(s) impacted the overall rating for scientific implementation merit and feasibility. Lack of an SEO will have no impact on the proposal's overall rating for scientific implementation merit and feasibility.

Student Collaboration proposals, if any, will be evaluated only for the impact they have on science implementation feasibility to the extent that they are not separable; student collaboration proposals will not be penalized in Step 1 for any inherent higher cost, schedule, or technical risk, as long as the student collaboration is shown to be clearly separable from the implementation of the Baseline Science Mission. The intrinsic merit of student collaborations will not be evaluated at this time.

This evaluation will result in narrative text, including specific major and minor strengths and weaknesses, as well as an appropriate adjectival rating for the scientific implementation merit and feasibility of the scientific investigation.

7.2.4 TMC Feasibility of the Mission Implementation, Including Cost Risk

The technical and management approaches of all submitted investigations will be evaluated to assess the likelihood that they can be successfully implemented as proposed, including an assessment of the likelihood of their completion within the proposed cost and schedule. The factors for feasibility of mission implementation include the following:

- Factor C-1. Adequacy and robustness of the instrument implementation plan. The maturity and technical readiness of the instrument complement will be assessed, as will the ability of the instruments to meet mission requirements. This factor includes an assessment of the instrument design, accommodation, interface, heritage, and technology readiness. This factor includes an assessment of the instrument hardware and software designs, heritage, and margins. This factor includes an assessment of the proposer's understanding of the processes, products, and activities required to accomplish development and integration of the instrument complement. This factor also includes adequacy of the plans for instrument systems engineering and for dealing with environmental concerns. This factor includes an assessment of plans for the development and use of new instrument technology and the adequacy of backup plans to mature systems within the proposed cost and schedule when technologies having a TRL less than 6 are proposed.
- Factor C-2. Adequacy and robustness of the mission design and plan for mission operations. This factor includes an assessment of the overall mission design and mission

architecture, the spacecraft design and design margins (including margins for launch mass, delta-V, and propellant), the concept for mission operations (including communication, navigation/tracking/trajectory analysis, and ground systems and facilities), and the plans for launch services. This factor includes mission resiliency – the flexibility to recover from problems during both development and operations – including the technical resource reserves and margins, system and subsystem redundancy, and reductions and other changes that can be implemented without impact to the Baseline Science Mission.

- Factor C-3. Adequacy and robustness of the flight systems. This factor includes an assessment of the flight hardware and software designs, heritage, and margins. This factor includes an assessment of the proposer's understanding of the processes, products, and activities required to accomplish development and integration of all elements (flight systems, ground and data systems, etc.). This factor includes an assessment of the adequacy of the plans for spacecraft systems engineering, qualification, verification, mission assurance, launch operations, and entry/descent/landing. This factor includes the plans for the development and use of new technology and the adequacy of backup plans to ensure success of the mission when technologies having a TRL less than 6 are proposed. The maturity and technical readiness of the spacecraft, subsystems, and operations systems will be assessed. The adequacy of the plan to mature systems within the proposed cost and schedule, the robustness of those plans, including recognition of risks and mitigation plans for retiring those risks, and the likelihood of success in developing any new technologies will be assessed.
- Factor C-4. Adequacy and robustness of the management approach and schedule, including the capability of the management team. This factor includes: the adequacy of the proposed organizational structure and WBS; the management approach including project level systems engineering; the roles, qualifications, and experience of the PI, PM, other named key management team members, and implementing organization, mission management team, and known partners; the commitment, spaceflight experience, and relevant performance of the PI, PM, other named key management team members, and implementing organization, mission management team, and known partners against the needs of the investigation; the commitments of partners and contributors; and the team's understanding of the scope of work covering all elements of the mission, including contributions. Also evaluated under this factor is the adequacy of the proposed risk management approach, including any risk mitigation plans for new technologies, any long-lead items, and the adequacy and availability of any required manufacturing, test, or other facilities. The approach to any proposed descoping of mission capabilities will be assessed against the proposed Baseline Science Mission. The plans for managing the risk of contributed critical goods and services will be assessed, including the plans for any international participation, the commitment of partners and contributors, as documented in Letters of Commitment, and the technical adequacy of contingency plans, where they exist, for coping with the failure of a proposed cooperative arrangement or contribution. This factor also includes assessment of proposal elements such as the relationship of the work to the project schedule, the project element interdependencies, the associated schedule margins, and an assessment of the likelihood of launching by the proposed launch date. Also evaluated under this factor are the proposed project and schedule

management tools to be used on the project along with the subcontracting plan, including small and small disadvantaged businesses.

- Factor C-5. Adequacy and robustness of the cost plan, including cost feasibility and cost risk. This factor includes proposal elements such as cost, cost risk, cost realism, and cost completeness including assessment of the basis of estimate, the adequacy of the approach, the methods and rationale used to develop the estimated cost, the discussion of cost risks, the allocation of cost reserves by phase, and the team's understanding of the scope of work (covering all elements of the mission, including contributions). Proposals will be evaluated for the adequacy of the cost reserves and whether proposals with inadequate cost reserves demonstrate a thorough understanding of the cost risks. This factor also includes an assessment of the proposed cost relative to estimates generated using parametric models and analogies. Also evaluated under this factor are the proposed cost management tools to be used on the project.

[AO OPTION] The application and scope of any proposed use of NASA-developed technology will be evaluated for appropriateness and conformance to the guidelines in Section 5.9.3. The implementation feasibility and risk of the proposed use of NASA-developed technology will be evaluated against the factors in this section. All proposers will receive feedback, if applicable, on their proposed use of NASA-developed technology.

[AO OPTION] When appropriate, Factor C-2 will include an assessment of proposed planetary protection provisions to avoid potential biological contamination (forward and backward) that may be associated with the mission.

Student Collaboration proposals, if any, will be evaluated only for the impact they have on overall mission feasibility to the extent that they are not separable; student collaboration proposals will not be penalized in Step 1 for any inherent higher cost, schedule, or technical risk, as long as the student collaboration is shown to be clearly separable from the implementation of the baseline mission. The intrinsic merit of student collaborations will not be evaluated at this time.

This evaluation will result in narrative text, including specific major and minor strengths and weaknesses, as well as an appropriate risk rating for the feasibility of mission implementation.

7.3 Selection Factors

As described in Section 7.1.3, the results of the proposal evaluations based on the criteria above and the categorizations will be considered in the selection process.

Considering the critical role of the PI, PM, and their institutions, prior experience (especially in meeting cost and schedule constraints) will be an important risk factor in the selection of an investigation under this AO.

The Selection Official may take into account a wide range of programmatic factors in deciding whether or not to select any proposals for Phase A study and in selecting among top-rated proposals, including, but not limited to, planning and policy considerations, available funding, programmatic merit and risk of any proposed partnerships, and maintaining a programmatic and

scientific balance across SMD. While SMD develops and evaluates its program strategy in close consultation with the scientific community through a wide variety of advisory groups, the SMD program is an evolving activity that ultimately depends upon the most current Administration policies and budgets, as well as program objectives and priorities that can change quickly based on, among other things, new discoveries from ongoing missions.

The overriding consideration for the final selection of proposals submitted in response to this AO will be to maximize scientific return and minimize implementation risk while advancing NASA's science goals and objectives within the available budget for this program. Therefore, the proposed PI-Managed Mission Cost will be considered in the final selection of investigations through this AO. Depending on the availability of proposals of appropriate merit, this objective may be achieved by the selection of investigation(s) at the PI-Managed Mission Cost cap for this AO, one or more investigations significantly below the PI-Managed Mission Cost cap that would allow a more rapid release of the next AO, or a combination of investigations of various costs. Proposers are encouraged to propose well below the PI-Managed Mission Cost cap, as that permits greater flexibility and robustness in the Program and in SMD.

7.4 Implementation of Selected Proposals

7.4.1 Notification of Selection

Following selection, the PIs of the selected investigations will be notified by telephone, followed by formal written notification which may include any special conditions or terms of the offer of selection (*e.g.*, partial selections, see Section II of Appendix A) and any special instructions for the concept study. The formal notification will also include instructions for scheduling a debriefing at which any issues noted during the evaluation that may require attention during the Phase A concept study will be discussed, as well as instructions for attending the Project Initiation Conference.

The Selection Statement for this solicitation, which is signed by the Selection Official, may include information from the proposal summary (abstract) for any proposal, whether or not it is selected. Since the Selection Statement is a releasable document, the proposal summary (abstract) shall not contain proprietary or confidential information that the submitters wish to protect from public disclosure.

7.4.2 Principal Investigator-led Team Masters Forum

One step toward successful execution of PI-led missions is to ensure that PI-led mission management teams receive the instruction necessary to enable them to better execute their missions for NASA. SMD, in conjunction with the NASA Academy of Program, Project, and Systems Engineering Leadership (APPEL), has established a 2.5 day PI-led Team Masters Forum for newly selected PI-led mission management teams. The purpose of the PI-led Team Masters Forum is to facilitate knowledge sharing in areas that are deemed necessary to successfully execute PI-led SMD science missions. Course attendance by the leaders of newly selected PI-led mission management teams (PI, Project Manager, Project Scientist, and Project Systems Engineer) and the NASA Headquarters Program Scientist and Program Executive (where assigned) is required as soon as practical after proposal selection.

7.4.3 Award Administration and Funding

Oversight management responsibilities have been assigned to the <<Program Name>> Program Office at the <<Center Name>> Center. The responsibilities of the Program Office will include oversight of mission implementation; coordination of Government-furnished services, equipment and facilities; and contract management for selected investigations.

OPTION 1: Original approved Standard AO Template language

It is anticipated that the Program Office will provide funding to each selected investigation, as stated in Section 5.6.2; this award to perform a Phase A concept study is to be initiated as soon as possible after notification of selection. NASA Centers will receive funding via intra-agency funding mechanisms. In order to place Phase A awards in place, Statements of Work (SOWs) and cost and pricing data will be required for the Phase A concept studies.

Proposals are not required to include SOWs and cost and pricing data for Phase A concept studies and subsequent phases. These will be required only for investigations that are selected at the outcome of the Step-1 competition. If more than one contractual arrangement between NASA and the proposing team is required, a separate SOW is required for each organization.

For those investigations that are selected, it will be in the best interest of their PI-led mission management teams to provide SOWs and cost and pricing data in as timely a manner as possible. The process of awarding contracts cannot begin until SOWs and cost and pricing data have been received, and funds cannot be provided to the implementing organizations until this process has been completed.

SOWs will be required for selected investigations regardless of whether a proposing organization is Governmental or non-Governmental. SOWs will include the requirement for a Phase A Concept Study Report as described in the *Guidelines and Criteria for the Phase A Concept Study* document available in the Program Library, as well as general task statements for Phases B through F. SOWs will include the following as a minimum: Scope of Work, Deliverables (including science data), and Government Responsibilities (as applicable). SOWs need not be more than a few pages in length.

For Phase A contracts that exceed \$700K, the contractor will be required to provide cost and pricing data to support the Phase A cost estimate, in the format specified in NPR 5800.1, *Grant and Cooperative Agreement Handbook*, Section A, Exhibit A, and to certify the costs proposed for the Phase A contract in accordance with FAR 15.406-2.

Each Phase A contract will contain a priced option for a bridge phase, to be exercised upon investigations down-selected to proceed into Phase B. The bridge phase is intended to cover a five-month period of Phase B effort to provide program continuity while negotiations are completed to modify the contract to include Phases B, C/D, and E/F. The Bridge Phase Option will be exercised only on the contract for the mission that is chosen during the Step-2 downselection process to continue beyond the Phase A concept study. The Bridge Phase option will allow the Government to continue work under the contract after a Step-2 downselection decision is made. The five-month Bridge Phase period will be used to begin the negotiation of

the remaining phases of the contract with the successful PI downselected during following Phase A.

END OPTION 1

OPTION 2: Discovery/New Frontiers Program Office language

It is anticipated that the Program Office will provide funding to each selected investigation. The award of the Phase A concept study is to be initiated as soon as possible after notification of selection. NASA Centers will receive funding via intra-agency funding mechanisms. For each Phase A selection, NASA will request Statements of Work (SOWs) and cost and pricing data. If more than one contractual arrangement between NASA and the proposing team is required, a separate SOW and budget breakdown is required for each organization. For Phase A contracts that exceed \$650K, the contractor will be required to provide cost and pricing data to support the Phase A cost estimate and to certify the cost proposed for the Phase A contract in accordance with FAR 15.406-2. The contractor will also be required to provide cost and pricing data, and a SOW, for a 5-month Phase B bridge option.

For those investigations that are selected, it will be in the best interest of their PI-led mission management teams to provide SOWs and cost and pricing data in as timely a manner as possible. The process of awarding contracts cannot begin until SOWs and cost and pricing data have been received, and funds cannot be provided to the implementing organizations until this process has been completed.

SOWs will be required for selected investigations regardless of whether a proposing organization is Governmental or non-Governmental. SOWs will include the requirement for a Phase A Concept Study Report as described in the *Guidelines and Criteria for the Phase A Concept Study* document available in the Program Library, as well as general task statements for Phases B through F. SOWs will include the following as a minimum: Scope of Work, Deliverables (including science data), and Government Responsibilities (as applicable). SOWs need not be more than a few pages in length.

Each Phase A contract will contain a priced option for a Bridge Phase, to be exercised upon investigations down-selected to proceed into Phase B. The Bridge Phase option will allow work to be continued uninterrupted under the contract after a Step-2 downselection decision is made. The Bridge Phase is intended to cover a five-month period of Phase B effort to provide program continuity while negotiations are completed to modify the contract to include Phases B, C/D, and E/F. The Bridge Phase option will be exercised only on the contract for the mission(s) chosen during the Step-2 downselection process to continue beyond the Phase A concept study. [OPTION 2A] Additional phases will be added to the contract after each Phase has been approved through the program review process. [OPTION 2B] The five-month Bridge Phase period will be used to begin the negotiation of the remaining phases of the contract with the successful PI downselected during following Phase A.

END OPTION 2

7.4.4 Conduct of the Phase A Concept Study

The concept studies are intended to provide NASA with more definitive information regarding the cost, risk, and feasibility of the investigations, as well as a detailed plan for the conduct of an appropriate education and public outreach program and an optional student collaboration, before final selection for implementation. The product of the concept studies is a Phase A Concept Study Report to be delivered by each selected investigation team <<NUMBER>> months following the establishment of initial contracts. The content and format of the study reports are specified in the *Guidelines and Criteria for the Phase A Concept Study* document in the Program Library.

The PI will provide in the Phase A Concept Study Report a proposed set of Level 1 requirements, including the criteria for full mission success satisfying the Baseline Science Mission and the criteria for minimum mission success satisfying the Threshold Science Mission. The PI will also provide in the Phase A Concept Study Report the allocation of the proposed cost reserves among the appropriate WBS elements. The PI-Managed Mission Cost will not increase by more than 20% from that in the Step 1 proposal to that in the Phase A Concept Study Report, and, in any case, will not exceed the PI-Managed Mission Cost cap. The NASA review of the completed Concept Study Report will include all mission facets, including E/PO. Risk reduction that has been accomplished during Phase A will be closely reviewed. NASA may request presentations and/or site visits to review the final concept study results with the investigators.

Each mission's Concept Study Report must conclude with a commitment by the PI for the cost, schedule, and scientific performance of the investigation. For each Phase B selection, and unless otherwise stated in the selection letter, the selected mission's cost cap will be set at the Concept Study Report's proposed cost.

NASA cannot guarantee that the proposed funding profile can be accommodated within the <<PROGRAM NAME>> Program's budget. A funding profile for the selected mission will be negotiated during Phase B.

7.4.5 Downselection of Investigations

The SMD Associate Administrator will make downselection decisions based on the evaluation of the Phase A Concept Study Reports and on programmatic considerations. The criteria for evaluating the concept study are as follows:

- Scientific merit of the proposed investigation;
- Scientific implementation merit of the proposed investigation;
- Technical, management, and cost feasibility, including cost risk, of the proposed investigation; and
- Merit of plans for E/PO, including any student collaboration proposed.

The evaluation criteria and downselection factors are described in the *Guidelines and Criteria for the Phase A Concept Study* document in the Program Library. Any changes to science and science implementation contained in the Phase A Concept Study Report will be carefully evaluated. Assuming no changes to the first two criteria, the emphasis during downselection will be on the latter two.

At the conclusion of Phase A, it is anticipated that the Selecting Official will continue <<NUMBER>> investigation to proceed into the subsequent phases of mission development for flight and operation. The target date for this continuation decision (*i.e.* “down-selection”) is given in Section 3.

Investigations may be downselected to enter Phase B or may be downselected for a funded Extended Phase A so one or more risks can be retired before it is allowed to proceed to Phase B. For investigations selected to enter Phase B immediately, the downselect serves as the Initial Confirmation Review gate (KDP-B); an investigation downselected for an Extended Phase A must subsequently pass an Initial Confirmation Review gate (KDP-B) with the SMD Program Management Council (PMC) before entering Phase B. There is no guarantee that an investigation downselected for an Extended Phase A will be approved to enter Phase B, even if all risks have been retired during the Extended Phase A. [OPTION 1]In no case is NASA required to exercise any option. NASA will not exercise any contract option nor continue funding those investigations not selected to proceed.[END OPTION 1]

Upon a continuation decision, NASA will execute the Bridge Phase option and begin to provide Phase B funding for the project that is continued beyond the Phase A concept study. During the Bridge Phase, NASA and the continued project will negotiate and sign a contract modification necessary for the remaining portion of Phase B. Deliverables for Phase B will be negotiated during the Bridge Phase, on the basis of information provided in the Concept Study Report.

For those investigations that are not continued, the contracts will be allowed to terminate without further expense to NASA. Every investigation team will be offered a debriefing of the evaluations of its Concept Study Report.

Should a non-U.S. proposal or a U.S. proposal with non-U.S. participation be selected, NASA's Office of International and Interagency Relations, Science Division, will arrange with the non-U.S. sponsoring agency for the proposed participation on a no-exchange-of-funds basis, in which NASA and the non-U.S. sponsoring agency will each bear the cost of discharging their respective responsibilities. Depending on the nature and extent of the proposed cooperation, these arrangements may entail a letter of notification by NASA with a subsequent exchange of letters between NASA and the sponsoring governmental agency or a formal Agency-to-Agency memorandum of understanding.

The contract or other funding mechanism for further formulation and implementation will conform to all applicable Federal and NASA procurement requirements. A *Draft Model Contract* for Phase B[OPTION 1]/C/D/E formulation and implementation[END OPTION 1] [OPTION 2] , which includes the clause “Advanced Agreement to Add Additional Phases,”[END OPTION 2] is available in the Program Library.

7.4.6 Confirmation of Investigations

Per NPR 7120.5D NID, at the end of Phase B, NASA will conduct an independent review of the investigation's readiness to proceed. This review must be completed before the project will be authorized to spend more than 25% of the proposed PI-Managed Mission Cost. The results of the

independent review and the project status will be presented to the SMD Program Management Council (PMC) at the Confirmation Review (KDP-C) for Confirmation to enter Phase C. If the project is classified Category 1 according to NPR 7120.5D NID, the Confirmation results will need subsequent approval from the Agency PMC. Following Confirmation, no rephasing between fiscal years of Phase E costs to Phase C/D will be permitted.

7.5 Opportunity for Debriefing of Nonselected Proposers

Proposers of investigations that are not selected will be notified in writing and offered oral debriefings for themselves and a representative from each of their main partners (if any). Written debriefing materials will be provided at the time of the oral debriefing. Such debriefings may be in person at NASA Headquarters or by telephone if the proposal PI prefers. In the former case, please note that all expenses and arrangements for attending a debriefing are the responsibility of the attendee. Travel and associated costs of attendance are not allowable as a direct cost under another Federal Government award, *i.e.*, contract, grant, or cooperative agreement. Government employees may attend and be authorized travel and associated costs as a matter of official business.

7.6 Process for Appeals

7.6.1 Agency Procurement Ombudsman

The Agency Procurement Ombudsman, designated in NPD 5101.32, *Procurement*, will take action to resolve concerns, disagreements, and recommendations submitted by interested parties that cannot be resolved at the Center level, or those having Agencywide implications, refer Center-specific issues to the appropriate Center Procurement Ombudsman for action, and periodically communicate with Center Procurement Ombudsmen on common Agencywide issues and refer those issues to the appropriate office for action. Under NPD 5101.32, the designated Agency Procurement Ombudsman is:

Director of the Contract Management Division
Office of Procurement
NASA Headquarters
Washington, DC 20546
USA

7.6.2 Protests

Only prospective offerors seeking contract awards under this AO have the right to file a protest, either at the Government Accountability Office (GAO) or with the Agency, as defined in FAR 33.101. The provisions at FAR 52.233-2 (“Service of Protest”) and NFS 1852.233-70 (“Protests to NASA”) are incorporated into this AO. Under both of these provisions, the designated official for receipt of protests to the Agency and copies of protests filed with the GAO is:

Assistant Administrator for Procurement
Office of Procurement
NASA Headquarters
Washington, DC 20546
USA

8. Conclusion

The <<Program Name>> Program provides an opportunity for NASA and its partners to accomplish important scientific exploration, as well as to generate opportunities to enhance education and engage the public in the excitement of science discoveries. NASA invites both the U.S. and international science communities to submit proposals for <<Program Name>> investigations in response to this Announcement.

for Science Mission Directorate

APPENDIX A

GENERAL INSTRUCTIONS AND PROVISIONS

See NASA FAR Supplement, Part 1872.705-1

I. INSTRUMENTATION AND/OR GROUND EQUIPMENT

By submitting a proposal, the investigator and institution agree that NASA has the option to accept all or part of the offeror's plan to provide the instrumentation or ground support equipment required for the investigation, or NASA may furnish or obtain such instrumentation or equipment from any other source as determined by the selecting official. In addition, NASA reserves the right to require use of Government instrumentation or property that subsequently becomes available, with or without modification, that meets the investigative objectives.

II. TENTATIVE SELECTIONS, PHASED DEVELOPMENT, PARTIAL SELECTIONS, AND PARTICIPATION WITH OTHERS

By submitting a proposal, the investigator and the organization agree that NASA has the option to make a tentative selection pending a successful feasibility or definition effort. NASA has the option to contract in phases for a proposed experiment and to discontinue the investigative effort at the completion of any phase. NASA may desire to select only a portion of the proposed investigation and/or that the individual participates with other investigators in a joint investigation. In this case, the investigator will be given the opportunity to accept or decline such partial acceptance or participation with other investigators prior to a NASA selection. Where participation with other investigators as a team is agreed to, one of the team members will normally be designated as its leader or contact point. NASA reserves the right not to make an award or cancel this AO at any time.

III. SELECTION WITHOUT DISCUSSION

The Government intends to evaluate proposals and award contracts without discussions with offerors. Therefore, each initial offer should contain the offeror's best terms from a cost or price and technical standpoint. However, the Government reserves the right to conduct discussions, if later determined by the Contracting Officer to be necessary.

IV. NONDOMESTIC PROPOSALS

The guidelines for proposals originating outside of the United States are the same as those for proposals originating within the United States, except that the additional conditions described in AO Section 5.7 shall also apply.

V. TREATMENT OF PROPOSAL DATA

It is NASA policy to use information contained in proposals and quotations for evaluation purposes only. While this policy does not require that the proposal or quotation bear a restrictive notice, offerors or quoters should, in order to maximize protection of trade secrets or other

information that is commercial or financial and confidential or privileged, place the following notice on the title page of the proposal or quotation and specify the information, subject to the notice by inserting appropriate identification, such as page numbers, in the notice. In any event, information (data) contained in proposals and quotations will be protected to the extent permitted by law, but NASA assumes no liability for use and disclosure of information not made subject to the notice.

RESTRICTION ON USE AND DISCLOSURE OF PROPOSAL AND QUOTATION INFORMATION (DATA)

The information (data) contained in (insert page numbers or other identification) of this proposal or quotation constitutes a trade secret and/or information that is commercial or financial and confidential or privileged. It is furnished to the Government in confidence with the understanding that it will not, without permission of the offeror, be used or disclosed for other than evaluation purposes; provided, however, that in the event a contract is awarded on the basis of this proposal or quotation, the Government shall have the right to use and disclose this information (data) to the extent provided in the contract. This restriction does not limit the Government's right to use or disclose this information (data), if obtained from another source without restriction.

VI. STATUS OF COST PROPOSALS

Submission of cost or pricing data, as defined in FAR 15.401, is required if the combined Phase A and Bridge Phase costs exceed \$650,000. Cost or pricing data will also be required for proposals for subsequent mission phases. The investigator's institution agrees that the cost proposal submitted in response to the Announcement is for proposal evaluation and selection purposes, and that, following selection and during negotiations leading to a definitive contract, the institution may be required to resubmit or execute all certifications and representations required by law and regulation.

VII. LATE PROPOSALS

The Government reserves the right to consider proposals or modifications thereof received after the date indicated for such purpose, if the selecting official deems it to offer NASA a significant technical advantage or cost reduction. (See NFS 1815.208.)

VIII. SOURCE OF SPACE INVESTIGATIONS

Investigators are advised that candidate investigations for space missions can come from many sources. These sources include those selected through this AO, those generated by NASA in-house research and development, and those derived from contracts and other agreements between NASA and external entities.

IX. DISCLOSURE OF PROPOSALS OUTSIDE THE GOVERNMENT

NASA may find it necessary to obtain proposal evaluation assistance outside the Government. Where NASA determines it is necessary to disclose a proposal outside the Government for evaluation purposes, arrangements will be made with the evaluator for appropriate handling of the proposal information. Therefore, by submitting a proposal, the investigator and institution agree that NASA may have the proposal evaluated outside the Government. If the investigator or institution desires to preclude NASA from using an outside evaluation, the investigator or institution should so indicate on the cover. However, notice is given that if NASA is precluded from using outside evaluation, it may be unable to consider the proposal.

X. EQUAL OPPORTUNITY

For any NASA contract resulting from this solicitation, the clause at FAR 52.222-26, "Equal Opportunity," shall apply.

XI. PATENT RIGHTS

- a. For any NASA contract resulting from this solicitation awarded to other than a small business firm or nonprofit organization, the clause at NFS 1852.227-70, New Technology, shall apply. Such contractors may, in advance of a contract, request waiver of rights as set forth in the provision at NFS 1852.227-71, Requests for Waiver of Rights to Inventions.
- b. For any NASA contract resulting from this solicitation awarded to a small business firm or nonprofit organization, the clause at FAR 52.227-11, Patent Rights -- Retention by the Contractor (Short Form), (as modified by NFS 1852.227-11) shall apply.

XII. RIGHTS IN DATA

Any contract resulting from this solicitation will contain the Rights in Data – General clause: FAR 52.227-14.

XIII. SMALL AND SMALL DISADVANTAGED BUSINESS SUBCONTRACTING

- a. Offerors are advised that NASA is subject to statutory goals to allocate a fair portion of its contract dollars to SDB concerns, HBCUs, and OMIs, as these entities are defined in 52.219-8 and 52.226-2 of the FAR. Offerors are encouraged to assist NASA in achieving these goals by using best efforts to involve these entities as subcontractors to the fullest extent consistent with efficient performance of their investigations.
- b. Offerors are advised that, by law, NASA prime contracts resulting from this solicitation which offer subcontracting possibilities, exceed \$650,000, and are with organizations other than small business concerns, the clause at FAR 52.219-9 shall apply. Accordingly, offerors awarded contracts for Phase A concept studies that exceed \$650,000 are required to submit small business subcontracting plans consistent with the FAR, covering the

study phase only, unless they adequately demonstrate that subcontracting opportunities are not reasonably available in the performance of these concept studies. Failure to do so will make the offeror ineligible for award. These plans should be submitted for negotiation after selection in conjunction with contract execution.

- c. As part of the down selection of investigations, offerors, other than small business concerns, are required to submit small business subcontracting plans, covering implementation and operation Phases B/C/D/E/F, at the time the Phase A concept study reports are delivered. Failure to submit a subcontracting plan will make the offeror ineligible for award. As part of the down select decision, these subcontracting plans will be evaluated on the participation goals and quality and level of work performed by small business concerns overall, as well as that performed by the various categories of small business concerns listed in FAR 52.219-9, except for SDBs. Offerors shall separately identify and will be evaluated on participation targets of SDBs in North American Industry Classification System (NAICS) codes determined by the Department of Commerce to be underrepresented industry sectors.

XIV. WITHDRAWAL OF PROPOSALS

Proposals may be withdrawn by the proposer at any time before award. Proposers are requested to notify NASA if the proposal is funded by another organization or of other changed circumstances that dictate termination of evaluation.

APPENDIX B

REQUIREMENTS FOR PROPOSAL PREPARATION

INTRODUCTION

The following requirements apply to preparation of proposals in response to this Announcement of Opportunity (AO). While the body of the AO specifies the general policies and requirements for preparing Step 1 proposals, as well as for implementing missions proposed in response to this opportunity, Appendix B contains the specific requirements for the format and content of Step 1 proposals. In the event of apparent conflicts between this Appendix and the policies and requirements specified within the body of the AO, the latter takes precedence.

GENERAL REQUIREMENTS

The following expands requirements in the AO, in particular Requirement 93.

Requirement B-1. A proposal shall consist of one volume divided into readily identifiable sections that correspond and conform to Sections A through J of this appendix. It shall be typewritten in English and shall employ metric (SI) and/or standard astronomical units, as applicable. It shall contain all data and other information that will be necessary for scientific and technical evaluations; provision by reference to external sources, such as Internet websites, of additional material that is required for evaluation of the proposal is prohibited.

Requirement B-2. All parts of a proposal, including photographs and/or colored graphics, shall be printed on recyclable white paper. Page size shall be either American standard 8.5 x 11 inches or European standard A4. Foldout pages (11 x 17 inches or A3) may also be employed at the proposers' discretion (see below for assessment of foldout pages against the page limit). Cardboard stock and loose-leaf binders are prohibited; plastic covers and spiral bindings are acceptable.

Requirement B-3. Text shall not exceed 55 lines per page. Margins at the top, both sides, and bottom of each page shall be no less than 1 inch if printed on 8.5 x 11 inch paper; no less than 2.5 cm at the top and both sides, and 4 cm at the bottom if printed on A4 paper. Single-column or double-column formats are acceptable for text pages. Type fonts for text and figure captions shall be no smaller than 12-point (*i.e.*, no more than 15 characters per inch; six characters per centimeter). There is no minimum requirement for fonts used within figures and tables, but all text in figures and tables shall be legible; fonts smaller than 8-point are often illegible.

Proposal Structure and Page Limits		
Section	Contents	Page Limits
A	Graphic Cover Page Proposal Summary Information Export controlled material statement (Section 5.8.2) Optional Restriction on Use statement (see Appendix A, Section V)	1 None 0.5 0.5
B	Fact Sheet	2
C	Table of Contents	None
D	Science Investigation	25 + TBD pages / instrument + TBD pages for SEO **
E	Science Implementation, including optional SEO	
F	Mission Implementation	25 + TBD pages/flight element **
G	Schedule Foldout(s) Management	(Schedule Foldout(s) do(es) not count against limit)
H	Cost and Cost Estimating Methodology Cost Table B3	8 (Table B3 does not count against limit)
I	Small Business Subcontracting Plan Acknowledgement of E/PO requirements Optional Student Collaboration plan	2 + 2 for optional student collaboration
J	Appendices (no others permitted):	
J.1	Table of Proposal Participants	None
J.2	Letters of Commitment	None
J.3	Resumes	None
J.4	Summary of Proposed Program Cooperative Contributions	None
J.5	Draft International Participation Plan Discussion on Compliance with U.S. Export Laws and Regulations	None
J.6A	Planetary Protection Plan	None
J.6B	Sample and Space-Exposed Hardware Curation Plan	None
J.7	Discussion of End-of-Mission Spacecraft Disposal Requirements	None
J.8	Compliance with Procurement Regulations by NASA PI Proposals	None
J.9	Master Equipment List (MEL)	None
J.10	Heritage	None
J.11	List of Abbreviations and Acronyms	None
J.12	List of References (optional)	None

** Total extra pages limited to <<TBD>> as described in Requirement B-4; extra pages may be distributed between Sections D-G as desired.

Requirement B-4. Proposals shall conform to the page limits specified in the *Proposal Structure and Page Limits* table. <<TBD>> extra page(s) each is (are) allotted for each separate science instrument in the Science Section (Sections D and E), <<TBD>> extra page(s) each is (are) allotted for each separate flight element [OPTION 1](*e.g.*, cruise element, landed element, sample return element, additional spacecraft)[OPTION 2] (*e.g.*, additional spacecraft are allotted two extra pages, but not two additional pages for each identical spacecraft)[END OPTIONS] in the Mission Implementation and Management Sections (Sections F and G), and <<TBD>> extra page(s) is (are) allotted for all science enhancement options (SEOs) combined, if they are permitted by the AO, in the Science Implementation Section (Section E). The total number of such extra pages in the Science and Mission Implementation sections combined shall not exceed a maximum of <<TBD>> extra pages regardless of the number of science instruments and unique flight elements. Every side of a page upon which printing appears will count against the page limits and, unless specifically exempted (*e.g.*, Requirement B-40 and Requirement B-49), each foldout page will count as two pages against the page limits as appropriate for its area (*e.g.*, a fold-out with the total area of two standard pages counts as two pages, *etc.*).

Requirement B-5. One copy of every proposal shall bear on its cover sheet the original signatures of the Principal Investigator and an official of the PI's institution who is authorized to commit its resources (see Section A of this appendix). This "original" copy shall be printed on a single side of each page, and it shall be bound in a manner (*e.g.*, with a binder clip, with a rubber band, in an accordion folder, *etc.*) that allows it to be disassembled easily for reproduction in the event that NASA needs additional copies. The number of printed "review" copies specified in Section 6.2.3 of this AO shall be submitted with the original copy; two-sided printing is required for the review copies.

Requirement B-6. A CD-ROM containing up to three searchable PDF files of the proposal, limited to the main proposal, all tables (see Requirement B-50 and Requirement B-69), and all applicable appendices (see Section J of this appendix), as well as EXCEL files of tables (see Requirement B-50 and Requirement B-69) shall be attached to the original and to each review copy.

A. GRAPHIC COVER PAGE AND PROPOSAL SUMMARY INFORMATION

A.1 HARDCOPY PROPOSAL

The following expands requirements in the AO, in particular Requirement 93.

Requirement B-7. A Graphic Cover Page and Proposal Summary Information, prepared as directed below, shall preface every proposal. The Proposal Summary Information will not be counted against the page limits.

Requirement B-8. The Graphic Cover Page shall contain, at a minimum, the following information and elements displayed on the cover page of the proposal:

- The proposal title;
- The name of the proposing organization;
- The name of the PI;

- The name and title of an official who is authorized to commit the proposing organization through the submission of the proposal;
- The signature of the PI and the authorizing official (unless these signatures appear on the Proposal Summary Information), and
- A 0.5 inch (13 mm) high by 2 inch (51 mm) long space in the upper right corner of the page for NASA to place the proposal number and the copy number.

Optionally, the Graphic Cover Page may also contain:

- Any illustrations or graphic elements of the proposer's choice (or none); and
- Any additional information of the proposer's choice that is nonproprietary and that does not provide additional content beyond what is in the proposal (or none).

Requirement B-9. The Proposal Summary Information shall include the information, and only the information, provided in the *Proposal Summary Information* document found in the Program Library. This information shall be identical to the information entered into the Electronic Cover Page in NSPIRES (see Requirement B-10). (Note: When the Electronic Cover Page is created in NSPIRES for this AO, the *Proposal Summary Information* document will be updated so that the list of questions/data/information required will match the list of questions/data/information required on the Electronic Cover Page in NSPIRES.) Including a printed copy of the completed NSPIRES Electronic Cover Page in the proposal will satisfy this requirement. These pages will not be counted against the page limits.

A.2 ELECTRONIC COVER PAGE (NSPIRES Submission)

The following expands requirements in the AO, in particular Requirement 96 and Requirement 97.

Electronic submission must be through the NASA Solicitation and Proposal Integrated Review and Evaluation System (NSPIRES) at <http://nspires.nasaprs.com/>.

Requirement B-10. This AO requires that proposal summary information, referred to as the Electronic Cover Page, shall be submitted electronically. The forms for the Electronic Cover Page are found in NSPIRES at <http://nspires.nasaprs.com/>. The Electronic Cover Page shall be completed and submitted online. The electronic submission of the Electronic Cover Page alone does not satisfy the deadline for proposal submission. Electronic submission of the Electronic Cover Page in NSPIRES need not be completed until after the proposal is finalized, but must be completed before the proposal submittal deadline specified in Section 3 of this AO.

Requirement B-11. The same proposal summary information shall be submitted on the Electronic Cover Page as is in Section A of the proposal. In particular, the list of proposal team members and the proposed costs must be identical.

Note that proposers have several options for meeting Requirement B-10 and Requirement B-11: (i) proposers may first finalize, copy, and submit the hardcopy proposal, including the Proposal Summary Information, and then complete and submit the Electronic Cover Page in NSPIRES; (ii) proposers may first complete and submit the Electronic Cover Page in NSPIRES and then print it out for inclusion in the hardcopy proposal; or (iii) any other order for completing and

submitting both the Proposal Summary Information in the hardcopy proposal and the Electronic Cover Page via NSPIRES. Both Requirement B-10 and Requirement B-11 require that the Proposal Summary Information and the Electronic Cover Page contain identical data and that both are received by NASA prior to the proposal deadline no matter what order they are completed and submitted.

The NSPIRES electronic cover page includes the response to the following instruction: “List all participants in this investigation, both requesting funding and not requesting funding, who do not appear on the proposal's cover page as a Co- investigator, Collaborator, or any other category of participant. Include name, institution, city, state or country, and a description of the role in five words or less (e.g. data analyst, facility provider, support technician).” It is recognized that individuals may be affiliated with the proposed investigation without being listed as team members on the proposal cover page. The information provided is used to ensure that the evaluation panels do not include individuals who have participated in one or more proposals as reviewers as they have the appearance of being biased.

Requirement B-12. Proposers shall ensure that the response to this instruction includes all team members as may be known at this time not listed in the Team Member section of the cover page who participated in a substantial way in the development of the investigation concept or the proposal itself, or who will participate substantially in the development and conduct of the investigation.

A.3 PROPOSAL TEAM MEMBER COMMITMENT THROUGH NSPIRES

The following expands requirements in the AO, in particular Requirement 95.

Every proposal team member (*i.e.*, every individual identified on the NSPIRES proposal cover page) must indicate his/her commitment to the proposed investigation through NSPIRES prior to proposal cover page submission. Team members must additionally confirm the organization through which they are participating on this proposal; identification of the organization serves as the commitment to the team specified in Requirement 95.

A proposal team member will receive an E-mail from NSPIRES indicating that he/she has been added to the proposal by the PI. The proposal team member should log in to NSPIRES. Once logged in, the proposal team member should follow the link in the “Reminders and Notifications” section of his/her NSPIRES home page, titled “Need <role> confirmation for proposal <title> for Solicitation <<solicitation number>>.” On the “Team Member Participation Confirmation” page, the proposal team member should read language about the Organizational Relationship, then click the “Continue” button.

If the contact information then displayed on the “Team Member Profile” screen is out of date, the proposal team member should update this information **later** using the “Account Mgmt” link in the NSPIRES navigation bar across the top. Prior to making that update, however, the team member should follow the on-screen prompts to identify the organization through which he/she is participating on this proposal. Click the “Link Relationship” button to the right side of the “Organizational Relationship” banner. Select the organization from the “Link Proposal to an

Association” part of the page. If the correct organization is not displayed here, try using the “Add Association” button to add the organization to this list. Then click the “Save” button at the bottom of the page. If the team member cannot find the organization when searching in the “Add Association” area (*i.e.*, the organization is not registered), type in the formal name in the space provided (or select “Self” if appropriate). Once the organization is selected and the “Save” button is clicked, there is a confirmation page that allows the team member to edit that relationship if it was chosen incorrectly. Click “Continue”.

Note that the organization through which the proposal team member is participating in the proposal might not be the proposal team member’s primary employer or primary mailing address. If the address information is accurate (or once it has been edited to be accurate), the proposal team member may log out of NSPIRES.

NSPIRES will send an E-mail to both the team member and the PI confirming that the commitment was made and the organization was identified. The PI may additionally monitor the status of proposal team member commitments by examining the “Relationship Confirmed” column on the Team Member page of the NSPIRES proposal cover page record. Note that the proposal cover page cannot be submitted until all identified team members have confirmed their participating organization.

Requirement B-13. Every proposal team member named on the proposal cover page shall personally commit to the proposed investigation through NSPIRES and identify the organization through which he/she is participating. The PI and every proposal team member shall ensure that the organization listed on the proposal cover page is the organization through which the proposal team member is participating in the proposal.

B. FACT SHEET

The following expands requirements in the AO, in particular Requirement 93.

Requirement B-14. Every proposal shall include a fact sheet that provides a brief summary of the proposed investigation. Information conveyed on this fact sheet shall include:

- Science objectives (including the importance of the science to the program science goals);
- Mission overview;
- Instrument complement;
- Key spacecraft characteristics;
- Mission management and participating organizations (including teaming arrangements, as known);
- Anticipated need for curatorial services for returned samples, as applicable;
- Schedule summary;
- The proposed PI-Managed Mission Cost in real year dollars (RY\$) and in FY <<YEAR>> dollars from Table B3; and
- The proposed Total Cost, including a breakdown of any contributed costs by contributing organization, in real year dollars (RY\$) and in FY <<YEAR>> dollars from Table B3.

C. TABLE OF CONTENTS

The following expands requirements in the AO, in particular Requirement 93.

Requirement B-15. Every proposal shall contain a table of contents that conforms to the outlines provided in Sections D through J of this appendix, below.

D. SCIENCE INVESTIGATION

The following expands requirements in the AO, in particular Requirement 4 through Requirement 21.

1. Scientific Background, Goals, and Objectives.

Requirement B-16. This section shall describe the goals and objectives of the investigation; the compelling nature of the investigation; the investigation's value to advancing NASA's science objectives; and the relationship of the proposed investigation to past, current, and future investigations and missions.

2. Science Requirements.

Requirement B-17. This section shall describe the investigation to be performed, the types of measurements to be taken; the characteristics, precision, and accuracy required to attain the scientific objectives; and the projected instrument performance. This section shall describe the data to be returned in the course of the investigation. The quality (*e.g.*, resolution, coverage, pointing accuracy, measurement precision, etc.) and quantity (bits, images, etc.) of data that must be returned shall be described. The relationship between the proposed data products (*e.g.*, flight data, ancillary or calibration data, theoretical calculations, higher order analytical or data products, [OPTION]sample returns, witness samples,[END OPTION] laboratory data, etc.) and the scientific objectives, as well as the expected results, shall be described. How the science products and data obtained will be used to fulfill the scientific requirements shall be demonstrated and supported by quantitative analysis. These descriptions shall constitute the Baseline Science Mission.

Requirement B-18. Traceability from science objectives to measurement requirements to instrument performance requirements, and to top-level mission functional requirements shall be provided in tabular form and supported by narrative discussion. Projected instrument performance shall be compared to instrument functional requirements.

Table B1, shown at the end of this appendix, provides an example of a tabular Science Traceability Matrix, with examples of matrix elements. This matrix provides the reference points and tools needed to track overall mission requirements, provide systems engineers with fundamental requirements needed to design the mission, show clearly the effects of any descoping or losses of elements, and facilitate identification of any resulting degradation to the science.

3. Threshold Science Mission.

Requirement B-19. This section shall identify the minimum acceptable data and scientific return for the mission (the Threshold Science Mission), below which the mission would not be worth pursuing. The Threshold Science Mission is identified with the “Threshold Science Requirements” in NPR 7120.5D NID. The scientific value of the Threshold Science Mission shall be discussed. NASA recognizes that, in some circumstances, the Threshold Science Mission may be identical to the Baseline Science Mission. In such cases, the proposer shall explain why there is no viable mission below the Baseline Science Mission.

E. SCIENCE IMPLEMENTATION

The following expands requirements in the AO, in particular Requirement 5 through Requirement 21 and Requirement 52 through Requirement 54.

1. Instrumentation.

Requirement B-20. This section shall describe the instrumentation and the rationale for its selection. It shall identify the individual instruments and instrument systems, including their characteristics and requirements, and indicate items that are proposed for development, as well as any existing instrumentation or design/flight heritage. It shall provide a clear understanding of how the concept will provide the required data, show how it can be accommodated by the spacecraft, demonstrate that instruments have the necessary unobstructed fields-of-view over the measurement period required, describe the technology readiness levels and the approach to bring systems to technology readiness level (TRL) 6 at preliminary design review (PDR). If no development plan is needed, the reasons for this shall be explicitly stated and the rationale shall be described. A preliminary description of each instrument design, with a block diagram showing the instrument systems and their interfaces, along with a description of the estimated performance of the instrument, shall be included. These performance characteristics (which shall be considered as requirements on the flight system) shall include mass, power, volume, data rate(s), thermal, pointing (such as control, stability, jitter, drift, accuracy, etc.), spatial and spectral resolution, observable precision, retrieved parameter sensitivity and accuracy, and calibration requirements. This section shall demonstrate that the instrumentation can meet the measurement requirements, including factors such as retrieval results for each remote sensor, error analysis of the information in all sensors, vertical and horizontal resolution, signal-to-noise (S/N) calculations, etc. It shall also discuss effects, such as radiation and contamination, on each instrument’s measurement capabilities as a function of mission time.

Requirement B-21. The following information shall be provided for each science instrument proposed:

- Mass (include breakouts of electronics and optics);
- Viewing direction in body coordinates;
- Pointing accuracy and stability requirements;
- Operational modes;
- Operational mode timeline;
- Data demand for each instrument operational mode;

- Onboard data processing and storage required from spacecraft;
- Power demand for each instrument operational mode including peak, average, and stand-by power; and
- Instrument thermal control capability.

2. Data Sufficiency.

Requirement B-22. This section shall discuss the quality and quantity of data to be generated by each instrument, as they relate to the proposed science investigation goals and objectives. The flow-down from science investigation goals to measurement objectives and instrument performance shall be stated clearly and supported by quantitative analysis.

3. Science Mission Profile.

Requirement B-23. This section shall discuss the science observing profile, including all mission-relevant parameters, such as orbit, navigation accuracy, operational time lines (including observing periods, data transmission periods and techniques, and time-critical events), etc. The manner in which the proposed investigation objectives, selected instruments, and measurement requirements drive the proposed mission design and operations plan should be apparent from this discussion.

4. Data Plan.

Requirement B-24. A schedule-based end-to-end data management plan, including approaches for data retrieval, validation, preliminary analysis, and archiving shall be described. The science products (*e.g.*, flight data, ancillary or calibration data, theoretical calculations, higher order analytical or data products, [OPTION]sample returns, witness samples,[END OPTION] laboratory data, etc.) shall be identified, including a list of the specific data products and the individual team members responsible for the data products. The plan shall identify the appropriate NASA data archive and the formats and standards to be used. It shall include an estimate of the raw data volume and a schedule for the submission to the data archive of raw and reduced data in physical units accessible to the science community.

5. Science Team.

Requirement B-25. This section shall identify each key member (*i.e.*, one whose participation is essential to the success of the investigation) of the science team and his/her role and responsibilities. Resumes or curriculum vitae of science team members shall be included as appendices to the proposal (see Section J.3 of this appendix). The role of each co-investigator (Co-I) shall be explicitly defined, the necessity of that role shall be justified, and the funding source (NASA or contributed) for the PI and each Co-I shall be noted. Nonfunded members of the science team shall be identified in the proposal as collaborators (see Section 5.4 of this AO). The role of collaborators may be defined and justified.

6. Plan for Science Enhancement Options (SEO).

Requirement B-26. If an SEO is proposed, this section shall define and describe the proposed activities (see Section 5.1.6 of this AO).

F. MISSION IMPLEMENTATION

The following expands requirements in the AO, in particular AO Requirement 21 through Requirement 28.

1. General Requirements and Mission Traceability.

Requirement B-27. This section shall provide a description of the spaceflight mission that is proposed to enable the science investigation.

In some areas (*e.g.*, instruments), the data requested may have already been presented in another section of the proposal (*e.g.*, the Science Implementation section). In such a case, a proposal may provide a reference to that section and need not repeat the data in this section.

Requirement B-28. The mission requirements that the science goals and objectives impose on the mission design elements, including mission design, instrument accommodation, spacecraft design, required launch vehicle capability, ground systems, communications approach, and mission operations plan, shall be provided in tabular form and supported by narrative discussion. Table B2 provides an example of a tabular Mission Traceability Matrix, with examples of matrix elements. Specific information that describes how the science investigation imposes unique requirements on these mission design elements shall be included.

This matrix, along with Table B1, provides the reference points and tools needed to track overall mission requirements, provides systems engineers with fundamental requirements needed to design the mission, shows clearly the effects of any descoping or losses of mission elements, and facilitates identification of any resulting degradation to the science.

Requirement B-29. NASA recognizes that the full depth of information requested in Requirement B-29 through Requirement B-40 may not be available for some aspects of mission implementation at this stage of mission design. In such cases, this section shall (i) describe the current design concept, (ii) explain why the design information is not complete, (iii) provide a time-based plan for completing the design, (iv) justify that the development of that aspect of the design is not required at this stage and that it is acceptable to develop details later, and (v) explain why the lack of information at this stage does not translate into a risk to the proposer's ability to implement the mission as proposed. The approach for developing the required depth of information, along with a corresponding development schedule, shall be included among the plans for future activity. In cases where a mission is proposed at or near the cost cap, but depth of technical implementation detail is deferred, the proposal shall justify the adequacy of the proposed cost reserves to prevent increases beyond the cost cap during Phase A and subsequent phases.

This requirement is levied to establish NASA's standard for completeness of information necessary to support a comprehensive assessment of implementation feasibility and risk. The quality of the proposal's response to this requirement contributes significantly to the quality of the TMC assessment. However, NASA recognizes the preliminary nature of Step 1 proposals, and thus Requirement B-28 will apply to all cases where the required information cannot, for whatever reason, be provided.

2. Mission Concept Descriptions.

Requirement B-30. Designs for all elements of the mission shall be described in sufficient detail to demonstrate that the proposed concept meets all of the basic requirements for a space flight mission, including mission design, spacecraft design, and supporting ground systems. Discussion of how the various mission elements meet the Mission Functional Requirements shall be included. At a minimum, the following mission elements shall be addressed: mission design, flight system capabilities, mission operations, and any additional elements.

Requirement B-31. Mission Design: This section shall address the following elements of mission design to the extent that they are applicable to the proposed mission and that they are known at the time of proposal submission. Any additional elements that are applicable to explaining the mission and demonstrating its feasibility shall also be addressed.

- Launch readiness date (including launch date flexibility);
- Mission duration;
- Orbit type (Earth orbit, heliocentric, etc.) and orbit information (semimajor axis, eccentricity, inclination, node time of day, argument of perigee, altitude), and/or trajectory design, as applicable to the proposed investigation;
- Critical events; and
- Ground station(s) usage (*e.g.* location(s), transmitting and receiving communication parameters).

Requirement B-32. Launch Vehicle Compatibility: Compatibility with the proposed launch vehicle shall be demonstrated by providing in the appropriate proposal section the launch site, fairing size, spacecraft mass, and mission orbit characteristics such as altitude (km – circular or apogee/perigee), inclination, C3, heliocentric and/or declination (DLA). Describe any known nonstandard requirements such as additional fairing doors, cleanliness and purge requirements, planetary protection, etc.

Requirement B-33. Flight System Capabilities: This section shall address the following flight system capabilities to the extent that they are applicable to the proposed mission and that they are known at the time of proposal submission. Any additional elements that are applicable to explaining the mission and demonstrating its feasibility shall also be addressed.

- Spacecraft Parameters:
 - (a) Figure of the complete spacecraft/instrument system, on the launch vehicle and in-flight, with major components labeled and approximate overall dimensions.
 - (b) Block diagram of the spacecraft subsystems and their components.
- Subsystem descriptions including structure, telecommunications, thermal, power, propulsion (if required), attitude determination and control, command and data handling, in-flight fault

management, flight software, and ground software. (Note that the discussion of the telecommunications subsystem should be limited to specifications, design, and proposed component hardware – discussion of the link performance is addressed as part of the mission operations approach). Subsystem detail shall include to the extent possible the following information:

- (a) Propulsion, including (i) Delta-V budget; (ii) for each propulsion mode propulsion type(s) (monoprop, bi-prop, dual-mode, solar electric, etc.), engines and thrust levels, and specific impulse; (iii) propellant allocation (impulse vs. attitude control system); and (iv) propellant margin, including nominal (to meet Delta-V requirement) and additional (to meet mass growth).
- (b) Command and Data Handling, including (i) spacecraft housekeeping data rates for nominal and safing strategy; (ii) data storage unit size (Mbits); and (iii) maximum storage record and playback rate.
- (c) Power

Deep Space, including Heliocentric[OPTION 1]Missions[OPTION 2] Orbit, Missions (non-ASRG)[END OPTIONS]:

(i) identify type of array structure (rigid, flexible, body mounted); (ii) solar array axes of rotation (vector projected in spacecraft coordinates); (iii) array size; (iv) solar cell type and efficiency; (v) expected power generation at Beginning of Life and End of Life; (vi) worst case Sun incidence angle to solar panels during science mission; (vii) battery type and storage capacity; (viii) worst case battery Depth of Discharge (DOD); and (ix) spacecraft bus voltage.

[OPTION 2]Deep Space, including Heliocentric Orbit, Missions (ASRG):

(i) number of ASRGs; (ii) power bus interface (*i.e.* battery dominated vs. capacitance) and characteristics (of battery or capacitors); (iii) expected power requirement for each mission phase; and (iv) minimum power capability needed to meet all requirements.[END OPTION 2]

Earth and Lunar Orbiter Missions, and Earth-Sun L1/L2:

(i) expected power requirement for each mission phase; (ii) minimum power capability needed to meet all requirements; and (iii) associated battery Depth of Discharge (DOD).

- (d) Attitude Determination and Control, including system pointing requirements and capabilities. Describe or define the following: (i) each spacecraft operational mode, including the sensors and actuators used, control method, and safing and/or contingency modes; (ii) attitude determination methodology and estimate of accuracy, including identifying whether ground postprocessing is required to meet science needs; (iii) agility requirements for slews or scanning; (iv) appendage pointing requirements, including articulation control methods and deployment accommodations; (v) sensor selection and performance, including identifying mounting location and field-of-view (FOV); (vi) actuator selection and sizing, including identifying mounting location(s); (vii) translational maneuver (Delta-V) control and accuracy; (viii) momentum management approach and mitigation of impacts on navigation accuracy, if applicable; (ix) on-orbit calibrations, if required, including expected accuracy; and (x) attitude control requirements for the spacecraft pointing control, pointing knowledge (at the instrument interface), pointing stability, or jitter.

- (e) Thermal control, including (i) temperature requirements, (ii) temperature control approach (*i.e.* passive vs. active), and (iii) special thermal design considerations (*e.g.*, cryogenic instrument requirements[OPTION 2], ASRG use[END OPTION 2]).

Requirement B-34. Additional Mission Elements: This section shall address any other major mission elements (*i.e.*, lander, upper-stage, etc.) to the extent that they are applicable to the proposed mission and to the extent that they are known at the time of proposal submission. Any additional elements that are applicable to explaining the mission and demonstrating its feasibility shall also be discussed.

- Provide a block diagram and description of relevant subsystems; and
- Demonstrate that the proposed design can accomplish the mission within the allocated resources.

Requirement B-35. Flight System Contingencies and Margins: This section shall summarize contingencies and margins of all key flight systems resources. For the driving mission element requirements derived from the Mission Functional Requirements, it should provide estimates of implementation performance and design margins with respect to the required performance. At a minimum, it shall include the following:

- Mass;
- Propellants;
- Power;
- Data Storage; and
- Attitude Control System.

For any other driving mission element requirements derived from the Mission Functional Requirements, provide estimates of implementation performance and design margins with respect to the required performance.

Definitions:
<p><u>Contingency</u>, when added to the current estimate for a resource, results in the maximum expected value for that resource. Percent contingency is the value of the contingency divided by the value of the resource less the contingency.</p> <p><u>Margin</u> is the difference between the maximum possible capability of a resource (the physical limit or the agreed-to limit) and the maximum expected value for a resource. Percent margin for a resource is the available margin divided by its maximum expected value.</p> <p><u>Example</u>: A payload in the design phase has a maximum expected mass of 115 kg, including a mass contingency of 15 kg. There is no other payload on the ELV and the ELV provider plans to allot the payload the full capability of the vehicle, if needed. The ELV capability is 200 kg. The mass contingency is $15/100 = 15\%$ and the mass margin is 85 kg or $85/115 = 74\%$.</p>

Example: The end-of-life (EOL) capability of a spacecraft power system is 200 Watts, of which 75 Watts has been allocated to the instrument and 100 Watts has been allocated to the spacecraft bus. The power margin is the unallocated 25 Watts or $25/175 = 14.3\%$. The current best estimate for the instrument power is 60 Watts, leaving 15 Watts or $15/60 = 25\%$ contingency to the 75 Watt maximum expected value.

Acknowledging that the maximum expected resource value is equal to the maximum proposed resource value (including contingency), the above technical terms can be expressed in equation form as:

Contingency = Max Expected Resource Value – current estimate of Resource Value

$$\% \text{ Contingency} = \frac{\text{Contingency}}{\text{Max Expected Resource Value} - \text{Contingency}} \times 100$$

Margin = Max Possible Resource Value – Max Expected Resource Value

$$\% \text{ Margin} = \frac{\text{Margin}}{\text{Max Expected Resource Value}} \times 100$$

Requirement B-36. Mission Operations: This section shall address, at a minimum, the following elements of mission operations to the extent that they are applicable to the proposed mission and that they are known at the time of proposal submission. Any additional elements that are applicable to explaining the mission operations and demonstrating their feasibility shall also be addressed. This section shall provide, at a minimum, the following items:

- Description of ground systems and facilities, including supporting ground software required for development and testing;
- Telecommunications, Tracking, and Navigation (Deep-Space/Lunar and Earth Orbital missions, as well as missions that utilize telecom relay orbiters), including (i) downlink information data volume; (ii) uplink information; (iii) for all transmit and receive modes, provide mode timeline, data rate(s), and durations; and (iv) ground network utilization plan, including ground stations, downlink parameters (frequencies, periods, capacities, margins, etc.), and retransmission capability;
- Description of approach for acquiring and returning critical event data, including clear identification of procurement and costing for supplemental resources (*e.g.*, mobile ground stations) if such are needed; and
- A high-level discussion of operations plan, including nominal sequence planning and commanding, team training, availability of spacecraft experts for operations, and operations center development.

3. Development Approach.

Requirement B-37. This section shall describe the development approach. This description shall include, at a minimum, the following items:

- Systems engineering approach (*e.g.*, plans, tools, processes for requirements, interfaces, and configuration management);
- Mission assurance approach, including (i) fault tolerance and fault management, (ii) product assurance, and (iii) reliability (*e.g.*, use or nonuse of redundancy, requirements for burn-in of parts, requirements for total operating time without failure prior to flight, *etc.*);
- Identification of instrument to spacecraft interfaces;
- Design maturity and heritage of mission elements (instruments, spacecraft, ground systems, and mission design, *etc.*) by reference to Appendix 10, Heritage, of the proposal (see Section J of this appendix);
- Essential trade studies that are to be conducted;
- Approach to management and closure of action items, hardware discrepancies, test anomalies, *etc.*; and
- Approach for handling special processes (*e.g.*, if radioactive sources are proposed, the approach to supporting the development, submittal, and approval of the necessary NEPA process and the Nuclear Safety Launch Approval process).

4. New Technologies/Advanced Developments.

Requirement B-38. This section shall describe any proposed new technologies and/or advanced developments and the approaches that will be taken to reduce their associated risks. If no advanced development is required, the justification for TRL 6 or above shall be clearly demonstrated. These descriptions shall address, at a minimum, the following topics:

- Identification and justification of the TRL for each proposed new development and/or advanced development at the time the proposal is submitted (for *TRL definitions*, see NPR 7120.8, *NASA Research and Technology Program and Project Management Requirements*, Appendix J, in the Program Library);
- Rationale for combining the TRL values of subsystems to derive the full system TRL as proposed;
- Rationale for the stated TRL value of a system that is an adaptation of an existing system of known TRL;
- The proposed approach for maturing each of the identified items to a minimum of TRL 6, defined as “system/subsystem model or prototype demonstration in a relevant environment, space, or ground” by the end of Phase B (include discussion of simulations, prototyping, systems testing, life testing, *etc.*, as appropriate);
- An estimate of the resources (manpower, cost, and schedule) required to complete the technology development; and
- Approaches to fallbacks/alternatives that exist and are planned, a description of the cost, decision date(s) for fallbacks/alternatives, relevant development schedules, and performance liens they impose on the baseline design, and the decision milestones for their implementation.

5. Assembly, Integration, Test, and Verification.

Requirement B-39. An illustration and brief discussion of the time-phased flow of the Integration and Test (I&T) Plan shall be presented. It shall summarize the key facilities, testbeds, and team members involved in the I&T Plan.

Requirement B-40. The project's verification approach shall be described briefly in this section. Flow diagrams, narrative text, and/or other relevant data may be used to convey this information. Elements of the approach that pose special challenges for the project (*e.g.*, mission critical performance or functional requirements that can't be tested on the ground, special facilities that may be required for testing, large scale simulation tools that must be developed and how they will be validated, critical path items, etc.) shall be highlighted. The I&T description shall demonstrate the credibility of the overall I&T approach, as reflected by consistency between the described test plans and the schedule, cost, and other resources needed to carry them out.

6. Schedule.

Requirement B-41. A project schedule foldout(s) covering all phases of the investigation shall be provided. This foldout will not be counted against the page limits. The schedule format shall indicate the month and year of each milestone, have a corresponding table of dates, and follow standard NASA WBS elements for task descriptions as prescribed in NPR 7120.5D NID. The schedule foldout and accompanying narrative, which is included in the page count for this section, shall address proposed major milestones including, at a minimum, the following items:

- Spacecraft development and major review dates;
- Instrument development and major review dates, including instrument-to-spacecraft/host integration and test;
- Ground systems development and major review dates (*e.g.*, mission operations and data analysis development schedule);
- Major deliverables (*e.g.*, Interface Control Documents (ICDs), simulators, engineering modules, flight modules, *etc.*);
- Launch vehicle integration and launch readiness;
- Compliance with NEPA and Nuclear Safety Launch Approval processes, if appropriate;
- Long-lead item specifications, development paths, and their impacts to schedule;
- Development schedule for SEOs, if any;
- Schedule critical path identification; and
- Funded schedule reserve, with indications of appropriate reserves associated with major milestones and deliverables.

G. MANAGEMENT

The following expands requirements in the AO, in particular Requirement 26, Requirement 42 through Requirement 49, Requirement 65, and Requirement 79.

Requirement B-42. This section shall describe the investigator's proposed management approach. The management organization (including an organization chart) and decision-making process shall be described, and the teaming arrangement and team communications shall be discussed. The organization chart should clearly indicate how the mission team is structured. The names of the primary team members, their organization, and their reporting relationship within the project shall be provided.

Requirement B-43. This section shall describe the specific roles and responsibilities of the PI, PM, PSE, and other named key management team members. It shall describe the qualifications and experience, especially any previous experience with similar systems and/or equipment (including their performance in meeting cost and schedule), of these key management team members, and demonstrate that they are commensurate with the technical and managerial needs of the proposed investigation. It shall also describe the qualifications and experience of the primary implementing institutions and demonstrate that they are commensurate with the technical and managerial needs of the proposed investigation.

Requirement B-44. This section shall describe the top risks considered significant by the PI and the PM, especially technical risks and risks associated with contributed hardware (if any), and potential mitigation strategies and associated schedule impacts. If cost risks are in this list, they should be described here and then discussed in Section H (see Requirement B-48). The management strategies for control, allocation, and release of technical margins, cost reserves, and schedule reserves shall be described. The approach to any potential descopes, including savings of resources (mass, power, dollars, schedule, etc.) by implementing descopes, and the decision milestone(s) for implementing descopes shall be discussed. Specifically, this description shall identify how these margins and reserves are to be allocated, tracked, and monitored, with what tools and by whom, and who will have the authority to release them. When contracts are required, the acquisition strategy, including any incentive strategy, shall be described.

Requirement B-45. If the proposal contains proposed contributions or cooperative arrangements, this section shall describe the technical and management interfaces in any proposed cooperative arrangements, explicitly demonstrating that the contributions are within the contributors' scientific and technical capabilities, and contingency plans for coping with potential failures of the proposed cooperative arrangements.

Requirement B-46. In the case where a proposal does not provide the required management and schedule details, for whatever reason, this section shall (i) describe the current management approach and schedule, (ii) justify that the development of that aspect of the project management and schedule is not required at this stage and that it is acceptable to develop details later, and (iii) explain why the lack of information at this stage should not translate into a risk to the proposer's ability to implement the mission as proposed, and (iv) justify the adequacy of the proposed cost reserves, given that the proposed cost is not allowed to increase beyond the cost cap during Phase A or at any later time. The process for developing the required depth of information, along with a corresponding schedule, shall be explicitly included among the plans for future activity.

H. COST AND COST ESTIMATING METHODOLOGY

The following expands requirements in the AO, in particular Requirement 61 through Requirement 64 and Requirement 66 through Requirement 75.

This section of the proposal must include an estimated cost of the investigation, a description of the methodologies used to develop the estimate, and a discussion of cost risks.

Requirement B-47. This section shall include the estimated cost of the proposed investigation. The estimated cost shall encompass all proposed activities, including all applicable mission phases, mission unique or special launch services, flight systems, ground systems, ground network fees, contributions, core E/PO program, any other AO-specific activities (*e.g.*, SC), and all cost reserves. These costs shall be consistent with the policies and requirements described in Sections 4 and 5 of this AO.

Requirement B-48. This section shall include a description of the methodologies used to develop the estimate. The cost estimating methodology discussion in this section shall provide an overview of the cost estimate development process. Any additional cost estimates or other validation efforts shall be described, the results presented, and any significant discrepancies discussed. The rationale for the proposed cost reserve levels shall be presented. Proposers shall provide additional Basis of Estimate data to assist the validation of their costs estimates. Examples of useful Basis of Estimate data include cost comparisons to analogous items/missions, vendor quotes, and parametric model results.

Requirement B-49. This section shall include a discussion of cost risks.

Requirement B-50. This section shall provide a foldout cost table, Table B3, which will not be counted against the page limit. Table B3 shall identify the proposed cost required in each mission phase and in each fiscal year; the costs shall be in real year dollars (RY\$). The top portion of Table B3 shall contain cost data relevant to the PI-Managed Mission Cost. The lower portion shall contain cost data for contributions and enhanced mission costs. The rows in Table B3 shall be the NASA standard WBS elements as defined in NPR 7120.5D NID. The costs for most elements shall be provided to WBS level 2, as shown in Table B3. Exceptions are the costs of individual instruments and any unique flight system elements such as [OPTION 1]coordinating science ground stations, DSN, or nonstandard facilities, [OPTION 2]landers or sample return capsules, DSN, and non-standard elements such as sample facilities,[END OPTIONS] which shall be explicitly shown. The columns in Table B3 shall be grouped and subtotaled by mission phase and shall be labeled with the appropriate fiscal years. Fiscal years that span more than one mission phase shall be split into two columns by mission phase. The final two columns are totals in real year dollars (RY\$) and totals in fiscal year <<YEAR>> dollars (FY00\$). Proposers shall use their own forward pricing rates to translate between real year dollars (RY\$) and fiscal year <<YEAR>> dollars (FY00\$). For organizations that are without approved forward pricing rates, proposers may use the NASA inflation/deflation indices in Table B4 to translate between real year dollars (RY\$) and fiscal year <<YEAR>> dollars (FY00\$).

Requirement B-51. Table B3 shall be provided additionally in EXCEL format on each CD submitted with the proposal. An EXCEL format template is available for download in the Program Library.

Requirement B-52. This section shall include a statement as to whether the proposer's approved forward pricing rates were used or NASA's inflation/deflation indices were used. If the proposer's approved forward pricing rates were used, this section shall include an explanation for how the forward pricing rates were derived to translate between real year dollars (RY\$) and fiscal year <<YEAR>> dollars (FY00\$) in Table B3.

I. SMALL BUSINESS SUBCONTRACTING PLAN, ACKNOWLEDGEMENT OF EDUCATION AND PUBLIC OUTREACH, AND OPTIONAL STUDENT COLLABORATION

The following expands requirements in the AO, in particular Requirement 55 through Requirement 60.

1. Small Business Subcontracting Plan

Requirement B-53. This section shall include one of the following, as applicable:

(i) demonstration that the offeror is a small business concern, (ii) demonstration that subcontracting opportunities are not reasonably available in the performance of the Phase A concept study, or (iii) small business subcontracting plans meeting the requirements in Section 5.5.1, Appendix A, and referenced parts of the FAR.

2. Education and Public Outreach

Requirement B-54. This section shall include the required statement of commitment from the PI (see Section 5.5.2 of this AO).

3. Student Collaboration

Requirement B-55. If a Student Collaboration (SC), as described in Section 5.5.3 of this AO, is proposed, then this section shall provide details of the development schedule of the SC, including decision points for determining SC readiness for flight. This section shall describe how the SC can be incorporated into the mission on a nonimpact basis. This section shall show that the SC is clearly separable from the rest of the proposed effort.

J. APPENDICES

Requirement B-56. The following additional information is required to be supplied with the proposal as Appendices and, as such, will not be counted within the specified page limit. No other appendices are permitted.

1. Table of Proposal Participants

The following expands requirements in the AO, in particular Requirement 85.

Requirement B-57. A table of proposal participants shall be provided. The table shall include all organizations named in the proposal including contributing organizations. The primary purpose of the table is to aid NASA in avoiding conflicts of interest during the evaluation of the proposal. A secondary purpose is to provide material helpful for the evaluation and selection process. The table shall have three columns: (i) name of organization, including city and state/country where it is located, (ii) role of organization, and (iii) total cost or budget for that organization (real year dollars over the life of proposal for baseline mission). The table shall have a row for every

organization named in the proposal, and the rows shall be organized into three sections: (i) major partners, (ii) science only, nonhardware partners, and (iii) minor partners, vendors, and suppliers, as known at the time of the proposal. Major partners are defined to be organizations responsible for providing project management, system engineering, major hardware elements, science instruments, integration and test, mission operations, and other major elements of the proposed investigation, as defined by the proposer.

2. Letters of Commitment.

The following expands requirements in the AO, in particular Requirement 36, Requirement 78, Requirement 84, and Requirement 85.

Requirement B-58. Letters of commitment signed by an institutional official shall be provided from (i) all organizations offering contributions of goods and/or services (both U.S. and non-U.S., but excluding Co-I services) on a no-exchange-of-funds basis, including all non-U.S. organizations providing hardware or software to the investigation, and, (ii) unless otherwise explicitly excepted elsewhere in this AO, all major participants in the proposal regardless of source of funding. Major partners are the organizations in Section (i) of the Table of Proposal Participants. Requirements for letters of commitment may be found in Section 5.8.1 of this AO.

3. Resumes.

The following expands requirements in the AO, in particular Requirement 42, Requirement 43, Requirement 51, and Requirement 52.

Requirement B-59. This section shall include resumes or curriculum vitae for the PI, PM, all Co-Is identified in the science section, and for any key project personnel who are named in the proposal. Specifically, each resume shall cite the individual's experience that is pertinent to the role and responsibilities that she/he will assume in the proposed investigation. Project management experience shall be included in the resumes of the PI, PM, and PSE. Resumes or curriculum vitae shall be no longer than three pages for the PI and one page for each additional participant. Resumes shall be organized alphabetically, by surname after that of the PI.

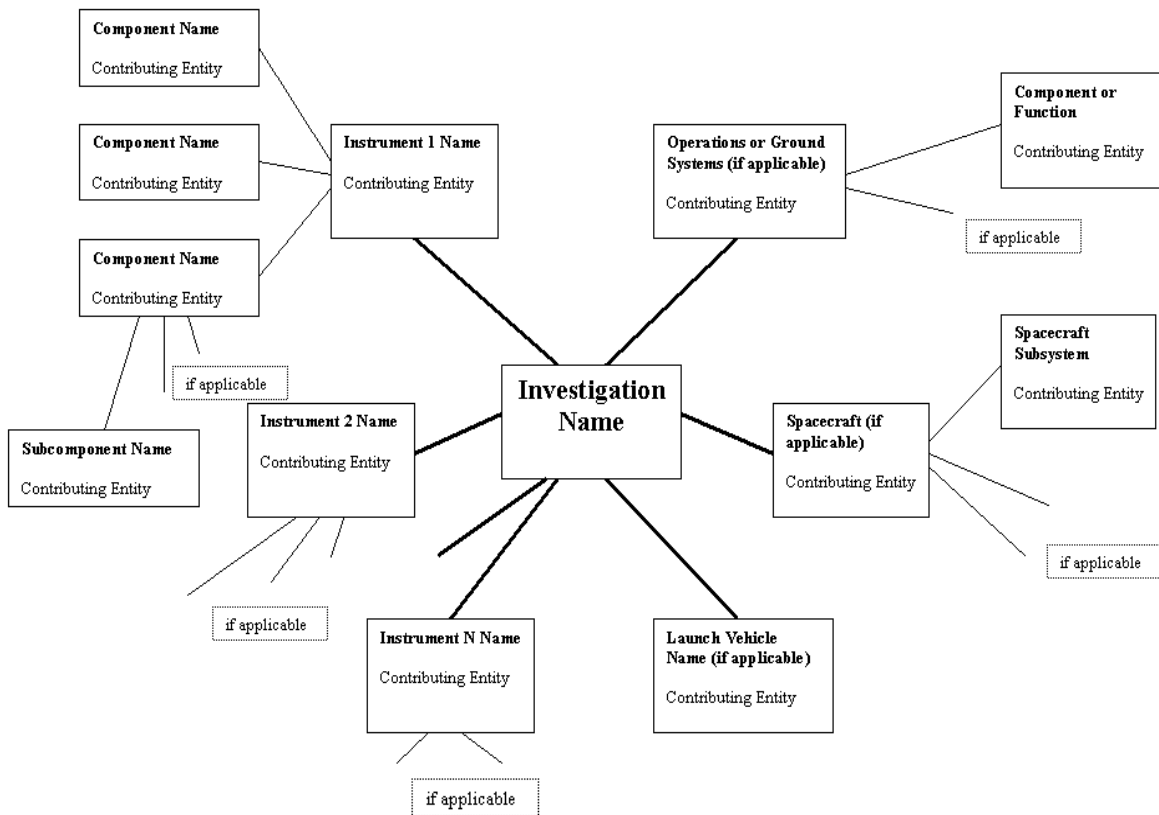

4. Summary of Proposed Program Cooperative Contributions.

The following expands requirements in the AO, in particular Requirement 74 through Requirement 76 and Requirement 81.

Cooperative contributions are defined to be those that are to be provided to the proposed investigation from a U.S. or non-U.S. partner on a no-exchange-of-funds basis. In order to aid NASA in conducting an equitable assessment of risks, this section shall include (a) an "exploded diagram" of the investigation and (b) a supporting table.

- a. An “exploded diagram” of the investigation.

SAMPLE EXPLODED DIAGRAM

Requirement B-60. If a proposal includes cooperative contributions, this section shall include an “exploded diagram” of the investigation (see example figure) that provides a clear visual representation of cooperative contributions incorporated in the proposed implementation approach. All cooperative contributions, including those that will require an international agreement or interagency memorandum of agreement, shall be shown in this diagram. Each contribution shown shall display a unique name for the contribution, as well as the identity of the contributing entity. However, the following should not be shown:

- i. If there are no cooperative contributions of spacecraft, launch vehicle or services, or ground operations or facilities, these boxes should not be shown on the diagram at all.
- ii. Scientific collaborations, such as joint data analysis that do not involve contribution of flight hardware or other critical items, should not be shown.
- iii. U.S. or non-U.S. goods and services obtained by contract using NASA funds are not cooperative contributions and are also not to be shown.

b. A supporting table of collaborative contributions

Requirement B-61. If a proposal includes cooperative contributions, this section shall include a supporting table with more information that elaborates upon each cooperative contribution shown in the exploded diagram. The table shall include, for each contribution, the following information:

- i. Unique name identifying the contribution (matching the name on the exploded diagram);
- ii. The identity of the providing organization, whether U.S. or non-U.S.;
- iii. The roles and responsibilities of the providing organization, including cross reference to information in the proposal providing further detail as required in Section 5.6.7 of this AO;
- iv. The identification of the funding sponsor, if different from the organization identified in item (ii) above;
- v. The approximate value of the contribution, in U.S. dollars, as defined in Section 5.6.7 of this AO; and
- vi. Cross reference to letters of commitment, as required in Section 5.8.1 of this AO.

5. Draft International Participation Plan - Discussion on Compliance with U.S. Export Laws and Regulations.

The following expands requirements in the AO, in particular Requirement 83.

Requirement B-62. If a proposal includes international participation, either through involvement of non-U.S. nationals and/or involvement of non-U.S. entities, this section shall discuss compliance with U.S. export laws and regulations; *e.g.*, 22 CFR 120-130, *et seq.* and 15 CFR 730-774, *et seq.*, as applicable to the scenario surrounding the particular international participation. The discussion shall describe in detail the proposed international participation and is to include, but not be limited to, whether or not the international participation may require the proposer to obtain the prior approval of the Department of State or the Department of Commerce via a technical assistance agreement or an export license, or whether a license exemption/exception may apply. If prior approvals via licenses are necessary, discuss whether the license has been applied for or, if not, the projected timing of the application and any implications for the schedule. Information regarding U.S. export regulations is available at <http://www.pmddtc.state.gov/> and <http://www.bis.doc.gov/>. Proposers are advised that under U.S. law and regulation, spacecraft and their specifically designed, modified, or configured systems, components, parts, etc., such as instrumentation responsive to this AO, are generally considered “Defense Articles” on the United States Munitions List and subject to the provisions of the International Traffic in Arms Regulations (ITAR), 22 CFR 120-130, *et seq.*

Requirement B-63. Foreign nationals requiring access to NASA facilities and information systems will be required to comply with Homeland Security Presidential Directive HSPD-12 (see <http://hspd12.nasa.gov/>), where applicable. This appendix shall also discuss the impact, if any, on the investigation and the proposed international participation of compliance with HSPD-12. If no impact is anticipated, this shall be explicitly stated.

6. (AO OPTION) Planetary Protection and/or Sample Curation Plan.

6a. Planetary Protection Plan

The following expands requirements in the AO, in particular Requirement 11 and Requirement 12.

Requirement B-64. If applicable, this section shall describe the plan for compliance with the planetary protection requirements described in Section 5.1.5.1 of this AO. At a minimum, it shall address (i) the anticipated planetary protection Category of the mission under NASA directives; (ii) the proposed mission operational accommodations to comply with the anticipated requirements, including organizational responsibilities; and (iii) the proposed steps to be taken for the preparation of flyby, orbital, and/or landed portions of the spacecraft to comply with any requirements for overall microbiological cleanliness and recontamination prevention prior to launch. If describing a sample return mission, this appendix shall additionally address (iv) the nature of the proposed implementation of back-contamination control and subsequent containment and testing of returned samples or the proposed rationale for the mission to be relieved from a containment requirement. This appendix shall address steps intended to be taken for planetary protection compliance and the implementing organization(s) responsible for implementing those steps.

6b. Sample and Space Exposed Hardware Curation Plan

The following expands requirements in the AO, in particular Requirement 13 and Requirement 14.

Requirement B-65. If applicable, this section shall describe the plan for sample and space-exposed hardware curation at the NASA JSC Astromaterials Curatorial Facility in accordance with the requirements in Section 5.1.5.2. At a minimum, this plan shall describe (i) the nature of samples expected to be returned, (ii) the methods used to prevent sample contamination or degradation during collection and return to Earth, (iii) the environmental conditions of the sample curatorial facility, (iv) the general procedures for storage, subsampling, documentation, distribution, and security, (v) the preliminary examination of the samples, and (vi) the preparation (within 6 months of return) of a sample catalog sufficient for other scientists to request samples. The plan shall demonstrate that at least 75% of the returned sample shall be preserved for future studies.

7. (AO OPTION) Discussion of End of Mission Spacecraft Disposal Requirements.

The following expands requirements in the AO, in particular Requirement 40.

This appendix is required only for proposed missions to Low Earth Orbit (LEO) (<2000 km perigee), near Geosynchronous orbit (GEO) ($\text{GEO} \pm 300 \text{ km}$), or the Moon (orbiters and landers).

Requirement B-66. This section shall discuss briefly how the mission meets the orbit disposal requirement applicable to its proposed orbit. For LEO missions, this section shall briefly discuss the lifetime of the mission and whether it meets the 25-year post-mission (or 30-year from launch – whichever comes first) requirement for LEO missions.

This section shall include a mission lifetime analysis demonstrating satisfaction of the above requirement, addressing all assumptions and inputs contributing to the analysis. These assumptions and inputs shall include, at a minimum:

- Vehicle Mass
- Drag Area or Cross-sectional Area
- Initial orbit used for the analysis
- Solar and atmospheric conditions assumptions (*i.e.*, models or parameters)
- Methodology: analytical tool, table lookup, reference plot.

If the plan is to dispose of the satellite at the end of mission, this section shall provide the parameters of the disposal orbit, the delta-v allocation for disposal, and any other relevant assumptions.

Requirement B-67. For Lunar missions, this section shall include a discussion of how end-of-mission requirements will be met.

The following references are available in the Program Library:

- NPR 8715.6A, *NASA Procedural Requirements for Limiting Orbital Debris*; and
- NASA-STD-8719.14, *NASA Process for Limiting Orbital Debris*.

8. Compliance with Procurement Regulations by NASA PI Proposals.

The following expands requirements in the AO, in particular Requirement 50.

This appendix is required only for proposals submitted by NASA PIs or NASA Centers (excluding JPL). Proposals submitted by NASA Centers must comply with regulations governing proposals submitted by NASA PIs (NFS 1872.308). Additional instructions may be found in Procurement Information Circular (PIC) 05-15 which is available in the Program Library.

Requirement B-68. For NASA Center proposals, this section shall include any descriptions, justifications, representations, indications, statements, and/or explanations that are required by the regulations.

9. Master Equipment List.

The following expands requirements in the AO, in particular Requirement 70.

Requirement B-69. This section shall include a Master Equipment List (MEL) summarizing all major components of each flight element subsystem and each instrument element component to support validation of proposed mass estimates, design heritage, and cost. A template for this MEL is included as Table B5.

Contributed flight element subsystem components and individual instrument element components that are a part of the PI's proposed hardware development shall be included in the MEL. This does not include the spacecraft when the spacecraft is external to the PI's proposed hardware development. This does not include the launch vehicle.

Requirement B-70. The MEL shall be additionally provided in EXCEL format on each CD submitted with the proposal. An EXCEL template of the MEL is available for download in the Program Library.

The breakouts should be traceable to block diagrams and heritage claims provided in other parts of the proposal. For each major component, current best estimates (CBE) and contingency for mass and power, number of flight units required, and some description of the heritage basis must be provided. Power values should represent nominal steady-state operational power requirements. Information to be provided includes identification of planned spares and prototypes, required deliveries for simulators and testing, contingency allocations for individual components, and other component description/characteristics. Certain items (like electronic boxes and solar arrays) should include additional details, as applicable, to identify and separate individual elements.

10. Heritage.

The following expands requirements in the AO, in particular Requirement 66.

Requirement B-71. This section shall discuss each element of any heritage from which the proposed investigation derives substantial benefit, including heritage from spacecraft subsystems, instruments, ground systems, flight and ground software, test set ups, simulations, analyses, etc. This discussion shall be at an appropriate level of granularity (*e.g.*, component, assembly, subsystem) to clearly separate the heritage element from other elements of the design. The discussion of each element shall include:

- a concise description of the design heritage claimed;
- the anticipated benefits to the proposed investigation;
- a brief rationale supporting the claim that the benefits of heritage will be achieved; and
- for any proposed elements with substantial design heritage, a comparison of the cost of the heritage items to the proposed cost.

Proposals must substantiate all heritage claims, including descriptions of changes required to accommodate project-unique applications and needs. Where enhancements to heritage elements are proposed or heritage is from a different application, sufficient descriptions must be provided to independently assess the current level of maturity.

Requirement B-72. If a proposal claims any heritage from which the proposed investigation derives substantial benefit, this appendix shall discuss each element to an appropriate level of granularity (*e.g.*, component, assembly, subsystem) to clearly separate the heritage element from other elements of the design.

The evaluation team will use a scale with at least three levels (full, partial, or none) as illustrated in the table below.

	Full heritage	Partial heritage	No heritage
Design	Identical	Minimal modifications	Major modifications
Manufacture	Identical	Limited update of parts and processes necessary	Many updates of parts or processes necessary
Software	Identical	Identical functionality with limited update of software modules (<50%)	Major modifications (>=50%)
Provider	Identical provider and development team	Different however with substantial involvement of original team	Different and minimal or no involvement of original team
Use	Identical	Same interfaces and similar use within a novel overall context	Significantly different from original
Operating Environment	Identical	Within margins of original	Significantly different from original
Referenced Prior Use	In operation	Built and successfully ground tested	Not yet successfully ground tested

11. List of Abbreviations and Acronyms.

The following expands requirements in the AO, in particular Requirement 93.

Requirement B-73. This appendix shall provide a list of abbreviations and acronyms.

12. List of References (optional).

In addition to the above items, this appendix may provide a reference list of documents and other materials that were fundamentally important in generating the proposal. This may include a Uniform Resource Locator (URL) for documents that are available through the Internet. As noted at the outset of Appendix B of this AO, however, proposals must be self-contained: any data or other information intended as part of a proposal must be included within the proposal itself. If any documents or other materials are submitted as a part of a proposal, they must fit within the prescribed page limits. If internal documents such as Flight Project Practices are referenced, an externally accessible URL shall be provided to download them.

TABLE B1
EXAMPLE SCIENCE TRACEABILITY MATRIX

Science Goals	Science Objectives	Scientific Measurement Requirements		Instrument Functional Requirements		Projected Performance	Mission Functional Requirements (Top Level)
		Observables	Physical parameters				
Goal 1	Objective 1	Absorption line	Column density of absorber	Alt. Range	XX km	ZZ km	Observing strategies: requires yaw and elevation maneuvers
Goal 2		Emission line	Density and temperature of emitter				Launch window: to meet nadir and limb overlap requirement. Window applies day to day
Etc.		Size of features	Morphological feature	Vert. Resol.	XX km	ZZ km	Need AA seasons to trace evolution of phenomena
				Horiz. Resol.	XX deg x XX lat x XX long	ZZ deg x ZZ lat x ZZ long	
		Rise time of eruptive phenomenon	Temp. Resol.	XX min	ZZ min.	Need AA months of observation to observe variability of phenomena	
			Precision	XX K	ZZ K		
			Accuracy	XX K	ZZ K		
		Objective 2 to N			Repeat above categories		

TABLE B2
EXAMPLE MISSION TRACEABILITY MATRIX

Mission Functional Requirements	Mission Design Requirements	Spacecraft Requirements	Ground System Requirements	Operations Requirements
From Table B1	Rocket type Launch date: Mission length Orbit altitude requirement and rationale Geographic coverage and how it drives orbit requirement Orbit local time and rationale for the requirement Type of orbit, e.g. Sun synchronous, precessing, Lagrangian point, other Other	Spinning, stabilized Mass Power Volume: Data Rate Temperature Range for spacecraft systems Pointing Control: Knowledge, Stability, Jitter, Drift , Other Detector radiation shielding requirements and rationale Other	Passes per day and duration Assumed antenna size Data volume per day Real time data transmission requirements Transmit frequency Power available for comm (Watts) Downlink data rate Number of data dumps per day Spacecraft data destination (e.g., mission operations center) Science data destination (e.g., science operations center) Other	General spacecraft maneuver requirements and frequency Special maneuvers requirements Rationale for maneuvers Ephemeris requirements Changes in viewing modes and directions per orbit, per day or over longer time periods. Rationale for these changes Other
Msn Functional Req or Instrument Accommodation (from Table B1)	Mission	Spacecraft	Ground System	Operations
Four different observing strategies: Solar, limb, nadir, zenith; requires yaw and elevation maneuvers		Agility requirements Slew rate = y deg/sec Settle = stability < .001 deg/sec after 30 secs		Target planning on 3 day centers Ephemeris accuracy of x with updates every 2 days
Instrument X precision of 5K		Thermal stability of 1 deg/hr S/C bus stability of .01 deg over 10 secs	Bit error rate < $1e-5$ Time correlation to 2 msec over 1 week	Weekly time correlation

TABLE B3
TOTAL MISSION COST FUNDING PROFILE TEMPLATE

Total Mission Cost Funding Profile Template																
FY costs in Real Year Dollars (RYS), Totals in Real Year Dollars (RYS) and Fiscal Year 2008 Dollars (FY08\$)																
WBS#	WBS Element	Phase A			Phase B			Phase C/D			Phase E			RYS		FY08\$
		FY200X	FY200X+1	Total	FY200X+1	FY200X+2	Total	FY200X+2	FY200X+3	FY200X+4	Total	FY200X+4	FY200X+5	Total	Total	Total

APPENDIX C

GLOSSARY OF TERMS AND ABBREVIATIONS

Part C.1: GLOSSARY OF TERMS

Announcement of Opportunity (AO) — A document used to announce opportunities to participate in NASA programs.

AO Process — A term used to describe the program planning and acquisition procedure used to acquire investigations through an AO.

AO Steering Committee — A NASA committee composed wholly of full-time Federal Government employees that provides advice to the Mission Directorate Associate Administrator and provides procedural review over the investigation evaluation, categorization, and selection process.

Backward contamination — The transmittal to Earth from another body of viable organisms by a spacecraft or spacecraft component.

Baseline science mission — The mission that, if fully implemented, would achieve the full science objectives proposed for the investigation.

Baseline science objectives — The entire set of scientific objectives proposed for the investigation.

Basis of Estimate (BOE) — A record of the procedures, ground rules and assumptions, data, environment, and events that underlie a cost estimate's development or update. Good documentation of the BOE supports the cost estimate's credibility.

Categorization — The process whereby proposed investigations are classified into four categories synopsized here as Category I (recommended for immediate acceptance); Category II (recommended for acceptance but at a lower priority than Category I proposals); Category III (sound investigations requiring further development); Category IV (not recommended).

Categorization Subcommittee — An *ad hoc* subcommittee of the AO Steering Committee, composed wholly of Civil Servants and Intergovernmental Personnel Act appointees (some of whom may be from Government agencies other than NASA) and appointed by the Associate Administrator for the Science Mission Directorate, that categorizes proposals for investigations submitted in response to an AO based on the evaluations.

Co-Investigator (Co-I) — An investigator who plays a necessary role in the proposed investigation and whose services are either funded by NASA or are contributed by his/her employer. A NASA employee can participate as a Co-I on an investigation proposed by a private organization.

Collaborator — An individual who is less critical to the successful development of the mission than a Co-I. A collaborator may not be funded through the proposal. A collaborator may be committed to provide a focused contribution to the project for a specific task, such as data analysis. If funding support is requested in the proposal for an individual, that individual shall not be identified as a collaborator but shall be identified as a Co-Investigator or another category of team member.

Complete spaceflight mission — A science investigation requiring an Earth-orbiting, near-Earth, or deep-space mission, that encompasses all appropriate mission phases from project initiation (Phase A) through mission operations (Phase E) and spacecraft disposal (Phase F), including the analysis and publication of data in the peer reviewed scientific literature, delivery of the data to an appropriate NASA data archive, and, if applicable, extended mission operations or other science enhancements.

Contingency — That quantity, when added to a resource, results in the maximum expected value for that resource.

Contribution — Labor, services, or hardware funded by any source other than Program sponsoring the AO.

Descscope — Any alteration of a mission that renders it unable to accomplish one or more of the Baseline Science Mission scientific objectives.

Earned Value Management (EVM) — A tool for measuring and assessing project performance through the integration of technical scope with schedule and cost objectives during the execution of the project. EVM provides quantification of technical progress, enabling management to gain insight into project status and project completion costs and schedules.

Federal Acquisition Regulation (FAR) — The regulations governing the conduct of acquisition.

Forward contamination — The transmittal from Earth to a targeted solar system body of viable organisms by a spacecraft or spacecraft component.

Guest Investigators — Investigators selected to conduct observations and obtain data within the capability of a NASA mission, which are additional to the mission's primary objectives. Sometimes referred to as Guest Observers or General Observers.

Hosted Payload — The utilization of available capacity on a spacecraft to accommodate additional hardware (e.g., a science instrument) typically arranged through a partnership.

Implementing organization — The organization chosen by the Principal Investigator to manage the development of the mission.

Investigation — Activities or effort aimed at the generation of new knowledge. NASA-sponsored investigations generally concern the generation and analysis of data obtained through measurement of space phenomena or Earth phenomena using spaceflight hardware developed and operated for that purpose.

Investigation Team — The group of scientists, engineers, and other professionals implementing an investigation.

Key Management Team Members — The project leaders whose qualifications and experience are relevant and necessary to the success of the project. Key management team members are the PI, PM, PSE, and, where appropriate, PS and partner leads, and other roles as identified in the proposal.

Margin — The allowance carried on a resource (*e.g.*, budget, schedule, mass) to account for uncertainties and risks. It is the difference between the maximum possible capability of a resource (the physical limit or the agreed-to limit) and the maximum expected value for a resource.

Mission — Used interchangeably with investigation.

Mission Architecture — The summary level description of the overall approach to the mission in the context of achieving the science objectives including mission elements such as flight systems, instruments, high-level mission plan, high-level operations concept, etc.

NASA FAR Supplement — Acquisition regulations promulgated by NASA in addition to the FAR.

Notice of Intent — A notice or letter submitted by a potential investigator indicating the intent to submit a proposal in response to an AO.

Passivation — The complete removal of any stored energy on board a spacecraft including residual propellants (by venting or burning), residual pressurants (by venting), electrical energy (by discharge or disconnection of batteries), kinetic energy (by unloading or de-spinning momentum wheels or gyros), and the disabling of range safety explosives.

Payload — A specific complement of instruments, space equipment, and support hardware carried to space to accomplish a mission or discrete activity in space.

Peer Review (n) — A gathering of experts in related disciplinary areas convened as a subcommittee of the AO Steering Committee to review proposals for flight investigations.

Peer Review (v) — The process of proposal review utilizing a group of peers in accordance with the review criteria as outlined in the Announcement of Opportunity.

Performance Metrics — A multi-party agreement between the Program Office, the PI institution, the project management institution, and other major partners that is used for project evaluation by NASA.

PI-Managed Mission Cost — The funding that the Program sponsoring the AO will be expected to provide to the PI's implementation team for the development and execution of the proposed project, Phases A through F. It includes any reserves applied to the development and operation of the mission as well. It also includes any costs that are required to be accounted for against the PI-Managed Mission Cost even though the PI is not responsible for those costs (*e.g.*, NASA-provided telecom and network). The PI-Managed Mission Cost is capped.

Principal Investigator (PI) — The person who conceives of an investigation and leads implementation of it. The PI is invested by NASA with primary responsibility for implementing and executing selected investigations. A NASA employee can participate as a PI only on a Government-proposed investigation.

Program — An activity involving human resources, materials, funding, and scheduling necessary to achieve desired goals.

Project — Within a program, an undertaking with a scheduled beginning and ending, which normally involves the design, construction, and operation of one or more spacecraft and necessary ground support in order to accomplish a scientific or technical objective.

Project Manager (PM) — The individual responsible to the PI for overseeing the technical and programmatic implementation of the project. The PM works closely with the PI in order to ensure that the mission meets its objectives within the resources committed to the project.

Project Office — An office established to manage a project.

Proposing Organization — The organization that submits the proposal; commonly this is also the Principal Investigator's home institution.

Reserve — Resource not allocated to any specific task but held by the project for unexpected needs.

Resiliency — The quality of a mission to gracefully degrade from the Baseline Science Mission to the Threshold Science Mission as technical, schedule, or budgetary problems occur.

Risk — The combination of the probability that a program or project will experience an undesired event and the consequences, impact, or severity of the undesired event, were it to occur. The undesired event may come from technical or programmatic sources (*e.g.*, a cost overrun, schedule slippage, safety mishap, health problem, malicious activities, environmental impact, failure to achieve a needed scientific or technological objective, or success criterion). Both the probability and consequences may have associated uncertainties.

Science Enhancement Option (SEO) — An activity, such as extended missions, guest investigator programs, general observer programs, participating scientist programs, interdisciplinary scientist programs, or archival data analysis programs that have the potential to broaden the scientific impact of investigations.

Selection Official — The NASA official designated to determine the source for award of a contract or grant.

Team — A group of investigators responsible for carrying out and reporting the results of an investigation or group of investigations.

Team Member — A participant in an investigation, including the Principal Investigator, a Co-Investigator, or any member of an investigation team. Team members are identified by role on the proposal's Electronic Cover Page.

Termination review — A review established to determine whether remedial actions, including changes in management structure and/or key personnel, would better enable a project to operate within established cost, schedule, and/or technical constraints. If a termination review determines that no remedy is likely to improve matters, NASA may consider termination of the project.

Threshold science mission — The mission that would accomplish the minimum subset of Baseline Science Mission scientific objectives sufficient to justify the proposed cost of the mission. The threshold science requirements set the science floor for the proposed mission.

Total Mission Cost — The PI-Managed Mission Cost plus any additional costs that are contributed or provided in any way other than through the Program sponsoring the AO.

Unencumbered reserve — Reserves that are free of liens identified by proposers and are held for risks that may be realized during project execution.

Work Breakdown Structure (WBS) — A product-oriented hierarchical division of the hardware, software, services, and data required to produce a project's end product(s), structured according to the way the work will be performed, and reflective of the way in which program/project costs, schedule, technical and risk data are to be accumulated, summarized, and reported.

Part C.2: COST ELEMENT DEFINITIONS

This is a short dictionary of definitions for the cost elements shown in the tables and discussed in the body of this AO.

Education and Public Outreach — Includes all costs associated with developing and implementing the proposed investigation's programs for education and public outreach.

Instruments — Instrument costs include costs incurred to design, develop, and fabricate the individual scientific instruments or instrument systems through delivery of the instruments to the spacecraft for integration. Costs for instrument integration, assembly, and test are to be shown separately from instrument development. Costs incurred for integration of the instruments to the spacecraft are included in the Spacecraft Integration, Assembly and Test cost element (see below).

Launch Approval Engineering or Launch Approval Process — The process by which National Environmental Protection Act and any applicable launch safety approval requirements are satisfied.

Launch Checkout and Orbital Operations — Launch checkout and orbital operations support costs are those involving prelaunch planning, launch site support, launch vehicle integration (spacecraft portion), and the first 30 days of flight operations.

Launch Services — Launch vehicles and services are either procured and provided by NASA to launch spacecraft under fixed price contracts or provided by the proposer. The launch service price includes procurement of the ELV, spacecraft-to-launch vehicle integration, placement of spacecraft into designated orbit, analysis, postflight mission data evaluation, oversight of the launch service and coordination of mission-specific integration activities.

Mission Operations and Data Analysis (MO&DA) — This cost element refers only to Phase E (post-launch) and has two major components: Mission Operations and Data Analysis. Mission operations comprises all activities required to plan and execute the science objectives, including spacecraft and instrument navigation, control, pointing, health monitoring, and calibration. Data analysis activities include collecting, processing, distributing, and archiving the scientific data. MO&DA costs include post-launch all costs for people, procedures, services, hardware, and software to carry out these activities. It includes post-launch science team support costs. It does not include costs of any Science Enhancement Option (SEO) activities.

NASA Center Costs (all categories) — Additional costs borne by the science investigation for NASA Center participation. For example, there may be additional project management/systems engineering costs, above those incurred by the spacecraft prime contractor, which are due to NASA employee participation. These costs must be reported on a full-cost accounting basis.

Prelaunch Science Team Support — Includes all Phase B/C/D (prelaunch) support costs for the science team. (See MO&DA for post-launch component.)

Prelaunch Ground Data System (GDS)/Mission Operations Services (MOS) Development — Includes costs associated with development and acquisition of the ground infrastructure used to transport and deliver the telemetry and other data to/from the Mission Operations Center and the Science Operations Center. (For more information, refer to *NASA's Mission Operations and Communications Services* document in the Program Library.) Includes development of science data processing and analysis capability. Also includes prelaunch training of the command team, development and execution of operations simulations, sequence development, and flight control software. This element includes any mission-unique tracking network development costs.

Project Management/Mission Analysis/Systems Engineering — Project management costs include all efforts associated with project level planning and directing of prime and subcontractor efforts and interactions, as well as project-level functions such as quality control and product assurance. Mission Analysis includes preflight trajectory analysis and ephemeris development. Systems engineering is the project-level engineering required to ensure that all satellite subsystems and payloads function properly to achieve system goals and requirements. This cost element also includes the data/report generation activities required to produce internal and deliverable documentation.

Project-Unique Facilities — If the proposed science investigation requires construction or lease of any ground facilities, include here only the portion of costs to be borne by the proposed investigation, with description of the nature and extent of any cost-sharing arrangements assumed.

Reserves — In that NASA maintains no reserves for science investigations or missions, reserves must include those funds that are not allocated specifically to estimated resources, but are held against contingencies or underestimation of resources to mitigate the investigation risk. Reserves must be reported according to the proposed reserve management strategy. For example, if the reserve is divided into funds to be preallocated to the flight system and instrument payload, with another portion held at the science investigation level, specific dollar amounts to fund each must be identified.

SEO Activities — Options for enlarging the science/technology impact beyond the baseline investigation, such as extended missions, guest investigator programs, general observer programs, or archival data analysis programs are termed SEO activities. These costs do not count against the funding cap.

Spacecraft Bus — Spacecraft bus costs include costs incurred to design, develop, and fabricate (or procure) the spacecraft subsystems. Costs for integration and assembly are not included in this element. Component level test and burn-in is included in this cost element. System tests are included in Spacecraft IAT (see below).

Spacecraft Integration, Assembly, and Test (IAT) — Spacecraft integration, assembly and test is the process of integrating all spacecraft subsystems and payloads into a fully tested, operational satellite system. The total cost of IAT for a satellite includes research/requirements specification, design and scheduling analysis of IAT procedures, ground support equipment, systems test and evaluation, and test data analyses. Typical satellite system tests include thermal vacuum, thermal cycle, electrical and mechanical functional, acoustic, vibration, electromagnetic compatibility/interference, and pyroshock.

Tracking Services including DSN — This line item includes all costs associated with this service for the specific proposed mission profile. (Refer to *NASA's Mission Operations and Communications Services* document, in the Program Library.)

Part C.3: ABBREVIATIONS AND ACRONYMS

AA	Associate Administrator
AO	Announcement of Opportunity
AOR	Authorized Organizational Representative

APPENDIX E

REQUIREMENTS FOR SUBSEQUENT PHASES

This appendix provides references to documents that govern subsequent phases of mission development for selected investigations. These documents may contain requirements on selected missions; however they do not place requirements on proposals submitted in response to this AO. Proposed investigations should be implementable within the program and project management environment that these documents describe. These documents may be found in the Program Library (Appendix D).

E.1 Phase A Concept Study Reports and Confirmation of Investigation(s) for Phase B

Guidelines and Criteria for the Phase A Concept Study

E.2 Confirmation of Investigation(s) for Phases Subsequent to Phase B

NPR 7120.5D NID, *NASA Space Flight Program and Project Management Requirements*

SPD-19, *Meeting the 70% JCL Requirement in PI-led Missions*

APPENDIX F

COMPLIANCE CHECKLIST

This appendix contains a checklist with the list of items that NASA will check for compliance before releasing a proposal for evaluation. All other requirements will be checked during evaluation.

Administrative	
1. Proposal received on time	Requirement 1
2. Original signature of authorizing official included	Requirement B-5
3. Electronic cover page and summary (NSPIRES submission) received on time	Requirement 2
4. Proposal includes proposal summary information with content identical to electronic cover page	Requirement B-7 Requirement B-9
5. Correct number of copies each including a CD	Requirement 94
6. Meets page limits	Requirement B-4
7. Meets general requirements for format and completeness (one volume original easy to disassemble, maximum 55 lines text/page, maximum 15 characters/inch --approximately 12 pt font)	Requirement 93 Requirement B-1 Requirement B-2 Requirement B-3
8. Required appendices included; no additional appendices	Requirement B-55
9. Budgets are submitted in required formats	Requirement B-49
10. All individual team members who are named on the cover page indicate their commitment through NSPIRES	Requirement 86
11. All export-controlled information has been identified.	Requirement 87
Scientific	
12. Addresses solicited science research programs	Requirement 4
13. Requirements traceable from science to instruments to mission	Requirement 5
14. Appropriate data archiving plan	Requirement 6
15. Baseline science mission and threshold science mission defined	Requirement 9
Technical	
16. Complete spaceflight mission (Phases A-F) proposed	Requirement 21
17. Team led by a single PI	Requirement 42
18. Includes commitment for E/PO program	Requirement 58
19. PI-Managed Mission Cost within cost cap	Requirement 62
20. Phase A costs within Phase A cost limit	Requirement 64
21. Contributions within contribution limit	Requirement 75
22. Co-investigator costs in budget	Requirement 53
23. Launch date prior to launch deadline	Requirement 88
24. Includes table describing non-U.S. participation	Requirement 81
25. Includes letters of commitment from funding agencies for non-U.S. participating institutions	Requirement 78
26. Includes letters of commitment from all U.S. organizations offering contributions	Requirement 84
27. Includes letters of commitment from all major partners	Requirement 85

APPENDIX G

REQUIREMENTS CROSSWALK

This appendix contains an approximate crosswalk between proposal requirements in the AO and proposal requirements in Appendix B. Proposal requirements in Appendix B expand upon the proposal requirements in the AO and provide further definition on the structure and content of the proposal. Some AO requirements do not require further definition by an Appendix B requirement. Not all possible crosswalk relations are shown.

<<NOTE TO AO AUTHORS: This crosswalk does not automatically update when requirements are added or deleted from the AO or Appendix B. This crosswalk must be adjusted by hand for each AO.>>

<<NOTE TO AO READERS: This crosswalk was not updated for each release of the Standard AO Template.>>

<u>AO Reqmt</u>	<u>AO Section</u>	<u>AO Reqmt Topic</u>	<u>Appendix B Reqmt</u>
1	3	Proposal submission	
2	3	Electronic submission	
3	5.1.1	Science scope	B-15
4	5.1.2	Science traceability	B-16
5	5.1.2	Data plan	B-21, B-22, B-23
6	5.1.3	Measurement traceability	B-17, B-21
7	5.1.3	Instrumentation rational	B-19, B-20, B-26
8	5.1.4	Baseline and threshold mission	B-18, B-26
9	5.1.4	Threshold mission	B-18
10	5.1.5.1	Planetary protection (encounters)	B-63
11	5.1.5.1	Planetary protection (samples)	B-63
12	5.1.5.2	Sample curation	AO OPTION
13	5.1.5.3	Sample allocation	AO OPTION
14	5.1.6	SEO Description	B-25

86	6.2.4	Electronic cover page	B-9, B-10, B-11
87	6.2.4	Electronic submission	B-10

APPENDIX H

CERTIFICATIONS

Included for reference only. Submission of the signed proposal including Section V of the Proposal Summary Information certifies compliance with these certifications.

Assurance of Compliance with the National Aeronautics and Space Administration Regulations Pursuant to Nondiscrimination in Federally Assisted Programs

The (*Institution or organization on whose behalf this assurance is signed, hereinafter called "Applicant."*)

HEREBY AGREES THAT it will comply with Title VI of the Civil Rights Act of 1964 (P.L. 88-352), Title IX of the Education Amendments of 1972 (20 U.S.C. 1680 *et seq.*), Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794), and the Age Discrimination Act of 1975 (42 U.S.C. 16101 *et seq.*), and all requirements imposed by or pursuant to the Regulation of the National Aeronautics and Space Administration (14 CFR Part 1250) (hereinafter called "NASA") issued pursuant to these laws, to the end that in accordance with these laws and regulations, no person in the United States shall, on the basis of race, color, national origin, sex, handicapped condition, or age be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity for which the Applicant receives Federal financial assistance from NASA; and HEREBY GIVES ASSURANCE THAT it will immediately take any measure necessary to effectuate this agreement.

If any real property or structure thereon is provided or improved with the aid of Federal financial assistance extended to the Applicant by NASA, this assurance shall obligate the Applicant, or in the case of any transfer of which the Federal financial assistance is extended or for another purpose involving the provision of similar services or benefits. If any personal property is so provided, this assurance shall obligate the Applicant for the period during which it retains ownership or possession of the property. In all other cases, this assurance shall obligate the Applicant for the period during which the Federal financial assistance is extended to it by NASA.

THIS ASSURANCE is given in consideration of and for the purpose of obtaining any and all Federal grants, loans, contract, property, discounts or other Federal financial assistance extended after the date hereof to the Applicant by NASA, including installment payments after such date on account of applications for Federal financial assistance which were approved before such date. The Applicant recognizes and agrees that such Federal financial assistance will be extended in reliance on the representations and agreements made in this assurance, and that the United States shall have the right to seek judicial enforcement of this assurance. This assurance is binding on the Applicant, its successors, transferees, and assignees, and the person or persons whose signatures appear below are authorized to sign on behalf of the Applicant.

Certification Regarding Debarment, Suspension, and Other Responsibility Matters
Primary Covered Transactions

This certification is required by the regulations implementing Executive Order 12549, Debarment and Suspension, 14 CFR Part 1265.

A. The applicant certifies that it and its principals:

1. Are not presently debarred, suspended, proposed for debarment, declare ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;
2. Have not within a three-year period preceding this application been convicted or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or Local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
3. Are not presently indicted for or otherwise criminally or civilly charged by a government entity (Federal, State, or Local) with commission of any of the offenses enumerated in paragraph A.(b) of this certification;
4. Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State, or Local) terminated for cause or default; and

B. Where the applicant is unable to certify to any of the statements in this certification, he or she shall attach an explanation to this application.

C. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion -- Lowered Tier Covered Transactions (Subgrants or Subcontracts)

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principles is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department of agency.
2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Certification Regarding Lobbying

As required by S 1352 Title 31 of the U.S. Code for persons entering into a grant over \$100,000, the applicant certifies that:

1. No Federal appropriated funds have been paid or will be paid by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, in connection with making of any Federal grant, the entering into of any cooperative, and the extension, continuation, renewal, amendment, or modification of any Federal grant;
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting an officer or employee of any agency, Member of Congress, or an employee of a Member of Congress in connection with this Federal grant, the undersigned shall complete Standard Form -- LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all subawards at all tiers (including subgrants, contracts under grants, and subcontracts), and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by S1352, Title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.
